5. Opazovano in napovedano število novih bolnikov s kožnim malignim melanomom, Slovenija 1990-2009 Observed and predicted number of new patients with cutaneous malignant melanoma, Slovenia 1990-2009	15
6. Starostno specifična incidenca kožnega malig. melanoma po spolu, Slovenija 1991-95 Age-specific incidence of cutaneous malignant melanoma by sex, Slovenia 1991-95	15
7. Lokacije kožnega malignega melanoma pri novih bolnikih, Slovenija 1991-95 New patients with cutaneous malignant melanoma by site of the disease, Slovenia 1991-95	16
8. Globina invazije kožega malignega melanoma po spolu, Slovenija 1991-1995 New patients with cutaneous malignant melanoma by depth of invasion and sex, Slovenia 1991-95	17
9. Relativno preživetje bolnikov z malignim melanomom po spolu, Slovenija 1973-92 Relative survival of patients with malignant melanoma by sex, Slovenia 1973-92	18

Tabele**Tables**

1. Prebivalstvo Slovenije po starosti in spolu na dan 30. junija 1995 Population of Slovenia by age and sex on June 30th, 1995	19
2. Prebivalstvo Slovenije po zdravstvenih regijah po spolu na dan 30. junija 1995 Population of Slovenia by health regions by sex on June 30th, 1995	20

3. Število novih primerov raka ter število in odstotek primerov, registriranih samo iz zdravniških poročil o vzroku smrti, po lokaciji in spolu - Slovenija 1995 Total number of new cancer cases, number and percentage of cases registered from death certificates only, by site and sex - Slovenia 1995	21
4a. Število novih primerov raka po lokaciji (MKB-8), spolu in starosti - Slovenija 1995 Number of new cancer cases by primary site (ICD-8), sex, and age - Slovenia 1995	25
4b. Število novih primerov raka po lokaciji(MKB-10), spolu in starosti - Slovenija 1995 Number of new cancer cases by primary site (ICD-10), sex, and age - Slovenia 1995	29
5. Incidenca raka na 100 000 prebivalcev po spolu in starosti ter kumulativna stopnja po lokaciji - Slovenija 1995 Cancer incidence per 100 000 population by sex and age, and cumulative rate by site - Slovenia 1995 ..	35
6. Število novih primerov raka po zdravstvenih regijah, po najpogostejših lokacijah in spolu - Slovenija 1995 Number of new cancer cases by health regions, by most frequent sites and sex - Slovenia 1995	41
7. Število novih primerov raka, ugotovljenih v bolnišnicah, ter število in odstotek mikroskopsko potrjenih primerov, po lokaciji in spolu - Slovenija 1995 Total number of new cancer cases diagnosed in hospitals and number and percentage of microscopically confirmed cases - by site and sex - Slovenia 1995	42
8. Število histološko (in citološko) potrjenih novih primerov raka - po histološki vrsti in lokaciji - Slovenija 1995 Number of histologically (and cytologically) confirmed new cancer cases by histologic type and site - Slovenia 1995	46
9. Število primerov ne-Hodgkinovih limfomov po lokaciji, spolu in starosti - Slovenija 1995 Total number of non-Hodgkin's malignant lymphomas by site, sex, and age - Slovenia 1995	52
10. Število novih primerov raka po bolnišnicah ugotovitve diagnoze ter število in odstotek primerov, napotnih na Onkološki inštitut - Slovenija 1995 Number of new cancer cases diagnosed by reporting hospitals, and number and percentage of cases referred to the Institute of Oncology, Ljubljana - Slovenia 1995	53
11. Število in odstotek novih primerov raka, ugotovljenih v bolnišnicah, po stadiju, lokaciji in spolu - Slovenija 1995 Number and percentage of new cancer cases reported by hospitals by stage, site and sex - Slovenia 1995	55
12. Število umrlih za rakom in drugimi neoplazmami po lokaciji, spolu in starosti - Slovenija 1995 Number of cancer and other neoplasms deaths by site, sex and age - Slovenia 1995	59
13. Število vseh živih bolnikov z rakom po spolu in izbrani primarni lokaciji - Slovenija, 31. 12. 1995 Prevalence of cancer patients by sex and selected primary site - Slovenia, Dec. 31, 1995	63

UVOD

Register raka za Republiko Slovenijo (Register) je bil ustanovljen pri Onkološkem inštitutu v Ljubljani leta 1950 na pobudo in pod vodstvom profesorice dr. Božene Ravnihar kot posebna služba za zbiranje in obdelavo podatkov o incidenci raka in o preživetju bolnikov z rakom. Prijavljanje raka je od takrat dalje v Republiki Sloveniji obvezno, z zakonom predpisano (*Ur. l. SRS*, št. 10/50, št. 29/50, št. 14/65, št. 1/80, št. 45/82, št. 42/85 in *Ur. l. RS*, št. 9/92). Podrobneje ga zaenkrat še vedno določa Pravilnik o prijavi in kontroli rakavih bolnikov in o drugih tehničnih vprašanjih boja proti raku (*Ur. l. SRS*, št. 4/66).

Incidenca raka je po svetu zelo različna. Tudi Republika Slovenija kaže v zbolevnosti za rakom svojo posebno sliko. Zbrani podatki so številčna podlaga za ocenjevanje družbenega bremena rakavih bolezni v republiki, programiranje in ocenjevanje onkološkega varstva na področju primarne preventive, detekcije, diagnostike, zdravljenja, rehabilitacije, načrtovanje zmogljivosti in sredstev zdravstvenega varstva, ki so potrebna za obvladovanje rakavih bolezni (kadri, medicinska oprema, posteljne zmogljivosti), ter za klinične in epidemiološke raziskave v Sloveniji in v sklopu širših mednarodnih raziskav.

Populacijski register raka opravičuje svoj obstoj le, če se zbrani podatki tudi redno obdelujejo in objavljajo. Ena izmed stalnih oblik vračanja obdelanih informacij so prav letna poročila. Ker je virov informacij več, leta povsod po svetu izhajajo z najmanj dvoletnim zamikom.

Register je prva letna poročila izdajal že v letih 1953-57 za leta 1951-55. Prva analiza podatkov za leto 1950 je bila objavljena v *Zdravstvenem vestniku* leta 1951 (*Zdrav. Vestn.* 1951: 20, 264-277). Podatki za leta 1957-71 so bili objavljeni v periodičnih publikacijah Svetovne zdravstvene organizacije *Epidemiological and Vital Statistics Report* Vol. 14, No. 11, 1961; Vol. 16, No. 12, 1963; Vol. 17, No. 12, 1964; Vol. 19, No. 12, 1966; Vol. 20, No. 12, 1967) in v *World Health Statistics Report* (Vol. 23, No. 3, 1970; Vol. 24, No. 2, 1971; Vol. 25, Nos. 4, 5, 1972; Vol. 26, No. 8, 1973; Vol. 27, Nos. 6, 7, 1974). Podatki od leta 1965 dalje so bili spet redno objavljeni v posebnih letnih poročilih z naslovom *Rak v Sloveniji* (1965-77) oziroma *Incidenca raka v Sloveniji* (1978-94) v slovenskem in angleškem jeziku. Glede na želje in pripombe uporabnikov poizkušamo ta letna poročila iz leta v leto dopolnjevati. Pri tem nam pomaga uredniški odbor, v katerem so zbrani specialisti različnih vej onkologije (kliniki, epidemiologi in patolog).

Naš Register je ena prvih tovrstnih služb v Evropi. Pred letom 1950 so bili populacijski registri raka ustanovljeni le v Hamburgu, na Danskem, v Veliki Britaniji, v Belgiji in v tedanji ZSSR. Prav zato so in so bili naši podatki o incidenci raka zanimivi tudi za širši svet. Leta 1957 je izšlo prvo obsežnejše poročilo za leta 1950-55 v angleščini *Cancer in Slovenia 1955* (B. Ravnihar, A. Valentin, T. Božič, J. Doič, D. Pečirer). Podatke za leta 1956-60, 1961-65, 1968-72, 1973-76, 1978-81, 1982-87 in 1988-92 so objavili tudi v vseh sedmih zvezkih knjige *Cancer Incidence in Five Continents*, UICC, Ženeva (Vol. 1-1966, eds. Doll R., Payne P., Waterhouse J.; Vol. 2-1970, eds. Doll R., Muir C., Waterhouse J.), in IARC, Lyon (Vol. 3-1976, eds. Waterhouse J., Muir C., Correa C., Powell J.; Vol. 4-1982, eds. Waterhouse J., Muir C., Shanmugaratnam K., Powell J.; Vol. 5-1987, eds. Muir C., Waterhouse J., Mack T., Powell J., Whelan S.; Vol. 6-1992, eds. Parkin DM., Muir C., Whelan S., Gao Y., Ferlay J., Powell J.; Vol. 7-1997, eds. Parkin DM., Whelan S., Ferlay J., Raymond L., Young J.). Podatki o incidenti in umrljivosti za rakom za leta 1983-94 so vključeni tudi v podatkovno bazo *Mreže evropskih registrov raka EUROCIM*, ki jo vzdržujeva Evropska komisija programa *Evropa proti raku* in *Mednarodna agencija za raziskovanje raka*.

V letu 1993 smo prešli na sodobnejšo, s programom *Oracle* podprtto računalniško obdelavo podatkov na lastnem računalniku *Unix, SiliconGraphics IRIS4D/310S*. Zbrane podatke tako lažje obdelujemo še podrobneje v skladu s trenutno perečo problematiko v Sloveniji, našim raziskovalnim programom in željami naših uporabnikov. Ti podatki so objavljeni v domačem in tujem strokovnem tisku ter po potrebi tudi v dnevnih časopisih. V letu 1991 je izredno veliko število uporabnikov zanimalo pojavljanje raka na območju posameznih občin. Ker je za tovrstno analizo v enem letu v Sloveniji premalo primerov, smo leta 1992 izdali še posebno publikacijo za desetletno obdobje, *Zemljevidi incidence raka v Sloveniji, 1978-1987*. Leta 1995 je izšla s slovensko-angleškim besedilom knjiga *Preživetje bolnikov z rakom v Sloveniji 1963-1990*. Barvne slike in tabele s podatki o pričakovanim, opazovanem in relativnem preživetju bolnikov z rakom v šestih časovnih obdobjih spremljajo komentarji klinikov-onkologov. V pripravi pa je gradivo za objavo izsledkov študije *Napoved incidence raka v Sloveniji do leta 2000 in 2010*.

GRADIVO IN POJASNILA

Podatke dobivamo iz posebnih Prijavnic rakave bolezni iz vseh bolnišnic in diagnostičnih centrov v Sloveniji. Dopolnjujemo jih še z zdravniškimi poročili o vzroku smrti in s podatki iz obduktijskih zapisnikov, v katerih je navedena diagnoza rak, ter s prijavnicami iz zdravstvenih domov. **Zbiranje podatkov smo zaključili 24. decembra 1997.** Njihovo zanesljivost osvetljujeta dva kazalca: odstotek primerov raka, registriranih samo iz zdravniških poročil o vzroku smrti (tabela 3), in odstotek mikroskopsko (histološko ali citološko) potrjenih primerov (tabela 7).

Incidenca pomeni število vseh v enem koledarskem letu na novo ugotovljenih primerov raka. V incidentu ne štejemo novih primarnih rakov parnega organa iste lokacije, če je bila histološka vrsta obeh rakov, npr. leve in desne dojke, enaka. Prav tako v incidentu ne štejemo novega pojava raka iste histološke vrste na istem organu, npr. multiple lezije v debelem črevesu. Tabele prikazujejo podatke o prebivalcih in incidenti raka v Sloveniji v letu 1995 po spolu, starosti, lokaciji, histološki vrsti in stadiju bolezni ob diagnozi ter o incidenti po zdravstvenih regijah in območjih zdravstvenih domov, kot tudi podatke o številu novih primerov raka, ugotovljenih v tem letu po posameznih bolnišnicah. V tabele so vključeni le podatki o bolnikih, ki imajo stalno bivališče na območju Republike Slovenije, ne glede na to, kje so bili zdravljeni.

Slike 1-3 prikazujejo tiste podatke, ki naše uporabnike največkrat zanimajo: to je najpogostnejše lokacije raka po spolu ter trendi incidence vseh in izbranih rakov po spolu.

Slike 4-9 opozarjajo na rastočo problematiko kožnega malignega melanoma v Sloveniji. Pri nas je incidentna pričela strmeje naraščati šele v drugi polovici osemdesetih let. Zaradi strme rasti lahko pričakujemo v tem petletnem obdobju povprečno letno že 200 novih primerov, v naslednjem petletnem obdobju pa 250 novih primerov. Delež napredovale bolezni (Clark IV-V) so bili v letih 1991-95 v Sloveniji v primerjavi z drugimi evropskimi državami veliki, velik je bil tudi delež primerov z nedoločeno globino invazije po Clarku. V velikem deležu napredovale bolezni tiči razlog, da je pri nas v primerjavi z drugimi evropskimi državami relativno petletno preživetje slabše. V obdobju 1988-92 je bilo 49-odstotno pri moških in 67-odstotno pri ženskah. Glede na obdobje 1973-77 pa se je vendarle povečalo za 10 %.

V letu 1993 smo uvedli obvezno prijavljanje vseh sprememb materničnega vratu označenih kot CIN III. V tabelah 3-7 tako letos že tretjič navajamo število vseh primerov, prijavljenih kot CIN III. Mednje so šteti tudi tiisti, ki so bili označeni kot intraepitelijski in so bili v preteklih letih navedeni v teh tabelah pod šifro 2340. Število vseh primerov CIN III je dvakrat večje od števila primerov, prijavljenih kot intraepitelijski karcinom. Primerjava s podatki za obdobje 1961-92 tako ni možna. Letos smo na željo klinikov dodali še število vseh prijavljenih intraepitelijskih karcinomov mehurja in vseh malignih melanomov Clark I.

Zanesljivost podatkov za leto 1995, 3 % primerov, registriranih samo s pomočjo zdravniških poročil o vzroku smrti (tabela 3), je realen delež rakavih bolnikov, ki v Sloveniji zaradi starosti in/ali napredovale bolezni ni bil preiskovan in zdravljen v bolnišnici.

Lokacije raka smo v **tabeli 4** šifrirali po 8. (tabela 4a) in po 10. (tabela 4b) reviziji *Mednarodne klasifikacije bolezni* (MKB), da bi bralca opozorili na razlike med obema revizijama. Zaradi razlik tudi vsoti tabel 4a in 4b nista enaki. Po 10. reviziji MKB namreč policitemija rubra vera in mielofibroza nista uvrščeni med rakave bolezni. Število zbolelih otrok je mejah pričakovanega.

V vseh ostalih tabelah so lokacije raka šifrirane po 8. reviziji, da je primerjava s poročili od vključno 1970. leta dalje še možna.

Tabela 5 prikazuje grobo in starostno specifično incidenčno stopnjo na 100.000 prebivalcev ter kumulativno stopnjo na 100. Število vseh novih primerov raka iz leta 1995 je preračunano na število prebivalcev R Slovenije na dan 30. junija tega leta (tabela 1). Groba incidenčna stopnja je število novih primerov na 100.000 oseb, starostno specifična stopnja pove to relativno število v posamezni petletni starostni skupini. Kumulativna stopnja do 74. leta pa pove, kolikšna je verjetnost pri novorojenčku, da bo zbolel do vključno 74. leta starosti. Pomembna je pri primerjanju populacij z različno starostno strukturo. Day jo opredeljuje kot direktno, na dejansko populacijo posamezne petletne starostne skupine standardizirano incidenco (*Cancer Incidence in Five Continents*, Vol. 5, 1987: 787-789). Izračunamo jo kot petkratno vsoto starostno specifičnih incidenčnih stopnj na 100 prebivalcev posameznih petletnih starostnih skupin. Kumulativna incidenčna stopnja na 100.000 prebivalcev. Primerjava oblike krivulj na **sliki 2** pa nam kaže, da lahko staranju našega prebivalstva pripišemo naraščanje raka predvsem pri ženskah, medtem ko pri moških očitno k temu prispevajo še drugi dejavniki tveganja.

Na različno starostno strukturo območij zdravstvenih regij moramo pomisliti tudi pri uporabi in razlagi podatkov **tabele 6**. Njen namen je prikazati število novozbolelih za operativne namene načrtovanja zmogljivosti in sredstev zdravstvenega varstva na območjih zdravstvenih regij. Tako v tej tabeli prikazujemo tudi podatke o številu novih primerov CIN III. Za druge namene, predvsem za iskanje vzrokov takšnega ali drugačnega pojavljanja raka, je treba podatke najprej starostno standardizirati. Kako vpliva različna starostna struktura na incidenčne stopnje, je razvidno iz že omenjene knjige *Zemljevidi incidence raka v Sloveniji*, ki prikazuje tako grobe kot kumulativne incidenčne stopnje za vse in najpogostejše rake po območjih bivših občin.

Število vseh mikroskopsko, to je histološko ali citološko potrjenih novih primerov raka je navedeno v **tabelah 7 in 8**. V tabeli 8 so ločeno navedeni primeri, ki so histološko potrjeni, in tisti, ki so potrjeni samo citološko (ti primeri so navedeni v oklepaju). Vsota vseh je enaka številu vseh mikroskopsko potrjenih primerov, navedenemu v tabeli 7. Histološke vrste v tabeli 8 so šifrirane po 2. reviziji šifrantna ICD-O (WHO, 1991). Združili smo jih v smiselne skupine za namene tega poročila. To pa ne izključuje individualne obdelave po katerikoli šifri navedenega šifrantna ICD-O, npr. izpisa redkih histoloških vrst, kot so Burkittovi limfomi. Iz te tabele lahko razberemo tudi primarne lokacije ekstranodalnih malignih limfomov in njihovo število. Ekstranodalni maligni limfomi so namreč po 8. reviziji MKB dosledno uvrščeni med ustrezne šifre primarne lokacije raka.

Starostno porazdelitev ekstranodalnih in nodalnih lokacij ne-Hodgkinovih malignih limfomov kaže **tabela 9**. Zaradi majhnega števila prikazujemo le absolutna števila.

Klinike in bolnišnice prve prijave rakave bolezni so navedene v **tabeli 10**.

Poenostavljeni opredelitev stadijev ob ugotovitvi bolezni prikazuje **tabela 11**. Opredelitev stadijev solidnih tumorjev sicer praviloma sledi *klasifikaciji TNM*. Poenostavljena opredelitev stadijev upošteva vse preiskovalne metode, vključno operacijo; če bolnik ni bil predhodno zdravljen, pa tudi obdukcijo. V uporabi je zato, ker so podatki o stadiju bolezni po klasifikaciji TNM pogosto pomanjkljivi. Maligni limfomi so opredeljeni po klasifikaciji *Ann Arbor*. Podobno kot za histološke vrste je možen tudi izpis podatkov po klasifikaciji TNM, v kolikor so bili podatki ustrezno šifrirani na prijavnica oziroma že v popisih bolezni.

Uradni podatki o umrljivosti za rakom so v **tabeli 12**. Tabelo je pripravila dr. Jožica Šelb-Šemrl z Inštituta za varovanje zdravja RS. Podatki o prevalenci vseh in najpogostejših rakov so prikazani v **tabeli 13**. Dodali smo jo na željo številnih uporabnikov.

ZAHVALA

Zahvaljujemo se vsem zdravnikom, medicinskim sestram in administrativnemu osebju, ki so nam vestno in redno pošiljali podatke o novozbolelih rakavih bolnikih in njihovi nadaljnji usodi, ter Inštitutu za varovanje zdravja RS in Centralnemu Registru prebivalstva RS za dolgoletno sodelovanje. Prav posebej se zahvaljujemo sodelavkam Bolnišničnega registra Onkološkega inštituta v Ljubljani: Ani Dotzauer, Maruški Ferjančič in Nadi Jamšek, ki so z vodenjem evidence in s skrbnim izpisovanjem in šifriranjem podatkov iz popisov bolezni prispevale vsaj polovico v tem poročilu obdelanih podatkov, ter gospe Olgi Shresta za angleški prevod.

Uredniški odbor

Ljubljana, 24. 12. 1997

INTRODUCTION

The Cancer Registry of Slovenia (Registry) was founded in 1950 at the Institute of Oncology in Ljubljana, on the initiative and under the leadership of Prof. Božena Ravnihar, MD, as a special service for collecting and processing data on cancer incidence and cancer patients' survival. Since then notification of cancer has been compulsory in Slovenia (*Official Gazette of SRS*, No. 10/50, No. 29/50, No. 14/65, No. 1/80, No. 45/82, No. 42/85, and *Official Gazette of RS*, No. 9/92). Detailed definition on this is given in the Regulations on notification and follow-up of cancer patients and other technical aspects of anticancer activities (*Official Gazette of SRS*, No. 4/66).

Cancer incidence in the world varies greatly. The Republic of Slovenia also shows its specific cancer incidence pattern. The collected data serve as a basis for the assessment of cancer burden, for programming and evaluation of primary prevention, detection, diagnosis, treatments, rehabilitation, for planning facilities and funding needed for cancer control, hospital capacities and equipment, as well as for clinical and epidemiological research in Slovenia and in different multicentric international projects.

The existence of a population-based cancer registry is justified only by regular processing and publication of the collected data. The Registry's Annual Reports represent a permanent feed-back information. Because of a variety of data sources and contributors, almost all cancer registries practise at least a two year period delay before publishing.

The first analysis of data for 1950 was published in *Zdravstveni vestnik* in 1951, whereas the first annual reports of the Registry for the period 1951-55 were issued during the years 1953-57. The data for the period 1957-71 appeared in periodicals edited by World Health Organization - *Epidemiological and Vital Statistics Report*, Vol. 14, No. 11, 1961; Vol. 16, No. 12, 1963; Vol. 17, No. 12, 1964; Vol. 19, No. 12, 1966; Vol. 20, No. 12, 1967), as well as in *World Health Statistics Report* (Vol. 23, No. 3, 1970; Vol. 24, No. 2, 1971; Vol. 25, Nos. 4, 5, 1972; Vol. 26, No. 8, 1973; Vol. 27, Nos. 6, 7, 1974). The data from 1965 on have again appeared regularly in special annual reports, first entitled *Cancer in Slovenia* (1965-77), and afterwards *Cancer Incidence in Slovenia* (1978-94); the publication appears in Slovene and English. Our constant endeavours are directed into further improvement of these publications, taking into account the requests and comments of the users. In this, the support of our editorial board consisting of experts - oncologists of different specialities (i.e. clinicians, epidemiologists and a pathologist) proves to be very helpful.

Our Registry is one of the oldest services of this type in Europe. Before 1950, population-based cancer registries existed only in Hamburg (Germany), Denmark, Great Britain, Belgium and in the former Soviet Union. Therefore, our data on cancer incidence are interesting for a wide circle of professionals abroad. In 1957, the first comprehensive report in English for the period 1950-55 entitled *Cancer in Slovenia* was issued (B. Ravnihar, A. Valentin, T. Božič, J. Doič, D. Pečirer). The data for periods 1956-60, 1961-65, 1968-72, 1973-76, 1978-81, 1982-87 and 1988-92 were reported in all seven volumes of the publication *Cancer Incidence in Five Continents* issued by UICC, Geneva (Vol. 1, 1966, eds. Doll R., Payne P., Waterhouse J.; Vol. 2, 1970, eds. Doll R., Muir C., Waterhouse J.), and IARC, Lyon (Vol. 3, 1976, eds. Waterhouse J., Muir C., Correa C., Powell J.; Vol. 4, 1982, eds. Waterhouse J., Muir C., Shanmugaratnam K., Powell J.; Vol. 5, 1987, eds. Muir C., Waterhouse J., Mack T., Powell J., Whelan S.; Vol. 6, 1992, eds. Parkin D.M., Muir C., Whelan S., Gao Y., Ferlay J., Powell J.; Vol. 7-97, eds. Parkin D.M., Whelan S., Ferlay J., Raymond L., Young J.). The data on cancer incidence and mortality for the years 1983-94 are also included in EUROCIM, the data base of the Network of European cancer registries, maintained by the European Commission of Europe Against Cancer program, and LARC (International Agency for Research on Cancer).

In 1993 we started to perform computer data analyses with the *Oracle* relational data base support on our own *Unix - Silicon Graphics IRIS4D/310S* server. This facilitates detailed analyses of the collected data, in accordance with the current problems in Slovenia, as well as with respect to our research program and individual needs of our users. These data are published in the national and foreign medical literature and in the daily print, when necessary. In 1992, a special publication covering a ten-year period, *Atlas of Cancer Incidence in Slovenia, 1978-1987* was published. In 1995, a book entitled *Cancer patients survival in Slovenia, 1963-1990* with Slovene-English text was published. The color pictures and tables presenting the data on expected, observed and

relative survival of cancer patients in 6 time periods are explained by clinicians-oncologists' comments. The results of the study **Prediction of Cancer Incidence in Slovenia till 2000 and 2010** are being prepared for publication.

MATERIAL AND COMMENTS

The main sources of data are notifications gathered from all hospitals and diagnostic centers in Slovenia. This information is completed by death certificates and autopsy protocols stating cancer diagnosis, and by notifications from regional health centres. Data collecting was completed on 24 December 1997. The reliability of information can be assessed by two parameters: 1) the percentage of cancer cases registered solely on the basis of death certificates (Table 3), and 2) by the percentage of microscopically (histologically or cytologically) confirmed cases (Table 7).

Incidence represents the number of newly diagnosed cancer cases reported to the Registry in a given calendar year. New primary cancers of the same histology in paired organs were not comprised in the incidence figures, neither were any new cancers of the same histology appearing in the same organ, e.g. multiple lesions of the colon. In tables, data on population and on cancer incidence in Slovenia in 1995 by sex, age, site, histologic type, stage at diagnosis, as well as by health regions and health centre districts are presented along with data on the number of new cancer cases diagnosed in the same year in individual hospitals. Only the data on patients with permanent residence in Slovenia, regardless of the place of treatment, have been included.

Figures 1-3 present the data our readers are most frequently interested in: the most frequent cancer sites by sex, and the incidence trends for all and selected sites by sex.

Figures 4-9 call attention to the increasingly pressing problem of cutaneous malignant melanoma in Slovenia, where the incidence started to show an increasing trend only in the second half of the 80's. Based on that rapid growth, as many as 200 new cases can be expected in the present 5-year period, and 250 new cases in the following 5-year period. In comparison with other European countries, in Slovenia the rates of cases with advanced disease (Clark IV-V) in the period 1991-95 were high, and so were also the rates with an undefined depth of invasion by Clark. Our relatively worse five-year survival figures, as compared to other European countries, should be attributed to the high rates of cases with advanced disease. Thus in the period 1988-92 the relevant 5-year survival rates were 49% for males and 67% for females. Nevertheless, in comparison the the period 1973-77, the survival has increased by 10%.

In 1993, compulsory registration of all cervical intraepithelial displasias classified as CIN III was introduced. Thus, in the present report for the third time the number of all CIN III cases reported is given in Tables 3-7. CIN III include also the types classified as intraepithelial cancers, previously listed in these tables under the code 2340. The number of all CIN III cases is twofold that of the cases reported as intraepithelial carcinomas. Therefore, any comparison with the data for the period 1961-92 is not possible. On clinicians' request, the number of all reported intraepithelial carcinomas of the bladder and all malignant melanomas Clark I were added this year.

The reliability of the data for 1995 is reflected in 3% of cases registered only on the basis of death certificates (Table 3), which represent the actual rate of cancer patients in Slovenia who failed to be diagnosed or treated at hospital due to their old age and/or advanced disease.

In Table 4 cancer sites were coded according to the 8th (Table 4a) and the 10th (Table 4b) revision of the *International Classification of Disease (ICD)* in order to point out differences between the two revisions. Due to the differences also the totals in Tables 4a and 4b are not equal. Namely, according to the 10th revision of ICD, polycytemia rubra vera and myelofibrosis are not classified among cancer diseases. The number of childhood cancers has been within the limits of values expected.

In all other tables cancer sites were coded according to the 8th revision in order to render the comparison with reports from incl. 1970 on feasible.

Crude and age-specific incidence per 100 000 population is presented in Table 5 together with cumulative rate per 100. The number of all new cancer cases registered in 1995 has been calculated per Slovenian population census on 30 June, 1995 (Table 1). Crude incidence rate represents the number of new cases per 100.000 population, while age standardized rate expresses this relative number in an individual 5-year age group. Thus cumulative rate (0 to 74 years) expresses a newborn's risk of developing cancer by his completed 74th year of

age. It is important in comparing populations with different age structure. Day defines it as direct incidence, standardized to the actual population of an individual five-year group (*Cancer Incidence in Five Continents*, Vol. 5, 1987: 787-789). Cumulative incidence represents five times the sum of the age-specific incidence rates in 5-year age groups. Thus, the cumulative incidence of 5.6 / 100 for breast cancer in females means that e.g. 5.6 % of female newborns are expected to develop breast cancer till their 75th year of age. The cumulative incidence figures per 100 inhabitants differ from those of crude incidence per 100 000 population. The comparison of the curves on **Figure 2** indicates that the increasing cancer incidence rate in females can be attributed to the aging of population, whereas in males obviously additional risk factors should be considered as well.

When using and interpreting the data in **Table 6**, different age structure in regional health centre districts should be taken into account. It is intended to present the number of newly diagnosed cancers, as needed for planning of facilities and funding of health care in the regions and health centre districts. Therefore, in this table the data on all new CIN III cases by health centres are presented. When used for other purposes, particularly for the search of possible risk factors of different cancers, the data require previous age standardization. The influence of different age structures on the incidence rates is evident also from maps drawn in the mentioned *Atlas of Cancer Incidence in Slovenia, 1978-1987*, presenting crude as well as cumulative incidence rates for all and most frequent cancers by communes.

All microscopically, i.e. cytologically and histologically confirmed new cancer cases are presented in **Tables 7 and 8**. In Table 8 histologically verified cases are presented separate from those confirmed cytologically (the latter are given in brackets). The total amounts to the number of all microscopically confirmed cases given in Table 7. Histological types in Table 8 are coded according to the 2nd revision of ICD-O (WHO, 1991). For the purpose of this report, they have been joined to form sensible groups. This, however, does not exclude individual processing by any ICD-O code, e.g. outprint of rare histologic types such as Burkitt lymphomas. The table also provides information on primary sites of extranodal malignant lymphomas and their number, as the extranodal malignant lymphomas are strictly categorized among primary sites by corresponding codes in the 8th revision of ICD.

Age distribution of extranodal and nodal sites of non-Hodgkin malignant lymphomas is presented in **Table 9**. Owing to a small number of extranodal sites only the absolute numbers are given.

In **Table 10** university and general hospitals of first admission of cancer patients are cited.

A simplified definition of stages at diagnosis is presented in **Table 11**. Otherwise, solid tumor stage is classified according to *TNM Classification System*. In the simplified stage determination all investigation methods, incl. surgery, are considered. In the case that the patient has not been treated previously, autopsy report is considered as well. Malignant lymphomas are classified according to *Ann-Arbor System*. Similarly as for the histologic type, outprint of data by TNM classification is possible as well, provided that the data were coded correctly in patient records as well as on notification forms.

Official data on cancer mortality are given in **Table 12**. The table has been prepared by Dr. Jožica Šelb-Šemrl from the Institute of Public Health of the Republic of Slovenia. Data on prevalence of all and most frequent cancers are presented in **Table 13**. Both tables have been added on request of numerous users.

ACKNOWLEDGMENT

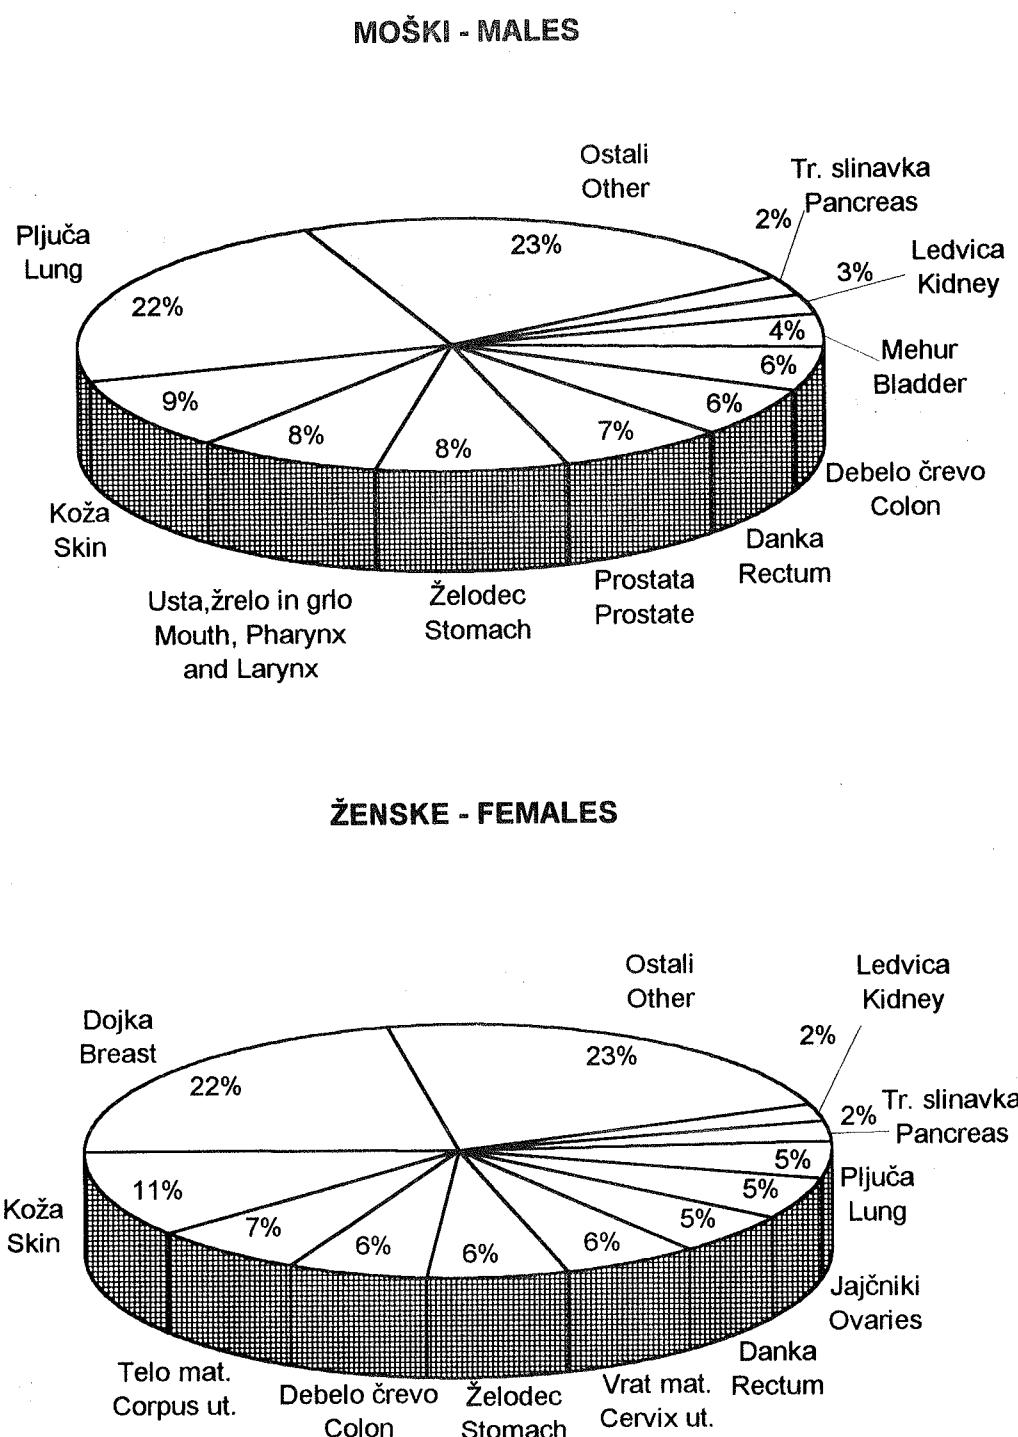

We thank the physicians, nurses and administrative staff who have provided the data on new cancer patients and their further history as well as the Institute of Public Health of the Republic of Slovenia and the Population Registry of the Republic of Slovenia for their longstanding collaboration. We owe special thanks to the co-workers at the Hospital Registry of the Institute of Oncology: Mrs. Ana Dotzauer, Maruška Ferjančič, and Nada Jamšek, whose accurate evidence keeping, registration and coding of data from patients records have contributed at least a half of the information presented in this report. We also thank Mrs. Olga Shrestha for translation and language proof-reading.
