# ŠOLA TUMORJEV PREBAVIL

***NOVOSTI V ZDRAVLJENJU***

LJUBLJANA  
22. november 2019

**Strokovni odbor:**

izr. prof. dr. Janja Ocvirk, dr.med.  
doc. dr. Martina Reberšek, dr.med.  
mag. Zvezdana Hlebanja, dr.med.  
dr. Neva Volk, dr.med.  
dr. Tanja Mesti, dr.med.  
Marko Boc, dr.med.

**Organizacijski odbor:**

izr. prof. dr. Janja Ocvirk, dr.med.  
doc. dr. Martina Reberšek, dr.med.  
mag. Zvezdana Hlebanja, dr.med.  
dr. Neva Volk, dr.med.  
dr. Tanja Mesti, dr.med.  
Marko Boc, dr.med.  
Lidija Kristan

**Uredniki zbornika:**

Marko Boc, dr.med.  
izr. prof. dr. Janja Ocvirk, dr.med.  
doc. dr. Martina Reberšek, dr.med.

**Organizator in izdajatelj (založnik):**

Ljubljana, november 2019

## KAZALO

### NOVOSTI V ZDRAVLJENJU RAKA DEBELEGA ČREVESA IN DANKE

#### Hlebanja Z.:

Napredovali RDČD – klinična dobrobit v zdravljenju v tretji in kasnejših linijah.....7

#### Volk N.:

Individualen pristop k odmerjanju zdravil v poznih linijah zdravljenja napredovalega RDČD .....23

#### Reberšek M.:

Novosti na področju biomarkerjev in personalizacije zdravljenja RDČD .....37

#### Iganjatović M.:

Adjuvantno sistemsko zdravljenje raka debelega črevesa .....59

#### Velenik V.:

Kompletno neoadjuvantno zdravljenje raka danke .....76

#### Breclj E.:

Rehabilitacija kirurških bolnikov z RDČD .....97

### MULTIDISCIPLINARNI PRISTOP K ZDRAVLJENJU BOLNIKA Z JETRNIMI ZASEVKI RAKA DEBELEGA ČREVESA IN DANKE

#### Ocvirk J.:

Pomen sistemskega zdravljenja pri jetrnih zasevkih RDČD .....107

#### Trotovšek B., Oblak I., Nina B.:

Kirurgija in drugi načini zdravljenja jetrnih zasevkov RDČD

Trotovšek B.: Kirurško zdravljenje jetrnih zasevkov RDČD.....115

Oblak I.: SBRT jetrnih zasevkov.....140

Nina B.: Nekirurško lokalno zdravljenje jetrnih zasevkov.....147

### MULTIDISCIPLINARNI PRISTOP K ZDRAVLJENJU BOLNIKA S KARCINOMOM TREBUŠNE SLINAVKE

#### Ocvirk J.:

Vloga neoadjuvantnega sistemskega zdravljenja .....163

#### Potrč S.:

Vloga kirurškega zdravljenja .....173

#### Oblak I.:

Vloga radioterapije.....196

#### Hlebanja Z.:

Vloga sistemsko terapije pri napredovalem karcinomu trebušne slinavke.....211

#### Šečerov-Ermenc A.:

Primer bolnika s karcinomom trebušne slinavke – SBRT .....225

### MULTIDISCIPLINARNI PRISTOP K ZDRAVLJENJU BOLNIKA Z KARCINOMOM ŽELODCA

#### Marko B.:

Vloga perioperativnega in adjuvantnega sistemskega zdravljenja.....237

#### Omejc M.:

Vloga kirurgije .....255

#### Oblak I.:

Vloga radioterapije.....268

#### Volk N.:

Zdravljenje metastatskega karcinoma želodca .....287

#### Hribenik N.:

Novosti v sistemskem zdravljenju raka želodca in GEP – prikaz primera bolnika .....306

## MULTIDISCIPLINARNI PRISTOP K ZDRAVLJENJU BOLNIKA S HCC

Mesti T.:

Vloga sistemskega zdravljenja ..... 314

Trotovšek B.:

Vloga kirurgije ..... 340

Popović P.:

Vloga interventne radiologije ..... 362

## MULTIDISCIPLINARNI PRISTOP K ZDRAVLJENJU BOLNIKOV Z RAKI PREBAVIL – PRIKAZI PRIMEROV

Kikec Z.: Bolnik z karcinomom trebušne slinavke ..... 379

Dobnikar N., Oblak I.: Zdravljenje bolnika z HCC s SBRT ..... 388

## PROGRAM SREČANJA: PETEK, 22.11.2019

07.00-08.00	<b>REGISTRACIJA</b>
08.00-10.50	<p><i>Moderatorja: izr. prof. Janja Ocvirk, dr.med., asist. dr. Martina Reberšek, dr.med.</i></p> <p><b><u>NOVOSTI V ZDRAVLJENJU RAKA DEBELEGA ČREVESA IN DANKE</u></b></p> <p><i>Hlebanja Z.: Napredovali rak debelega črevesa in danke – klinična dobrobit v zdravljenju v tretji in kasnejših linijah</i></p> <p><i>Volk N.: Individualen pristop k odmerjanju zdravil v poznih linijah zdravljenja napredovalega raka debelega črevesa in danke</i></p> <p><i>Reberšek M.: Novosti na področju biomarkerjev in personalizacije zdravljenja raka debelega črevesa in danke</i></p> <p><i>Ignjatović M.: Adjuvantno sistemsko zdravljenje raka debelega črevesa</i></p> <p><i>Velenik V.: Kompletno neoadjuvantno zdravljenje raka danke</i></p> <p><i>Brecelj E.: Rehabilitacija kirurških bolnikov z rakom debelega črevesa in danke</i></p> <p><u>Razprava</u></p>
10.50-11.00	<u>Odmor</u>
11.00-12.45	<p><b><u>MULTIDISCIPLINARNI PRISTOP K ZDRAVLJENJU BOLNIKA Z JETRNIMI ZASEVKI RAKA DEBELEGA ČREVESA IN DANKE</u></b></p> <p><i>Ocvirk J.: Pomen sistemskega zdravljenja pri jetrnih zasevkih</i></p> <p><i>Trotovšek B., Oblak I., Nina B.: Kirurgija in drugi načini zdravljenja jetrnih zasevkov raka debelega črevesa in danke</i></p>
12.45-13.00	<b>SATELITNO PREDAVANJE 1</b>
13.00-13.45	<u>Odmor za kosilo</u>
13.45-14.00	<b>SATELITNO PREDAVANJE 2</b>
14.00-15.45	<p><i>Moderatorji: prof. dr. Stojan Potrč, dr.med., asist. mag. Zvezdana Hlebanja, dr.med., izr. prof. dr. Irena Oblak, dr.med.</i></p> <p><b><u>MULTIDISCIPLINARNI PRISTOP K ZDRAVLJENJU BOLNIKA S KARCINOMOM TREBUŠNE SLINAVKE</u></b></p> <p><i>Ocvirk J.: Vloga neoadjuvantnega sistemskega zdravljenja</i></p> <p><i>Potrč S.: Vloga kirurškega zdravljenja</i></p> <p><i>Oblak I.: Vloga radioterapije</i></p> <p><i>Hlebanja Z.: Vloga sistemske terapije pri napredovalem karcinomu trebušne slinavke</i></p> <p><i>Šečerov-Ermenc A.: Primer bolnika s karcinomom trebušne linavke – SBRT</i></p>
15.45-16.00	<u>Odmor</u>
16.00-17.30	<p><i>Moderatorji: prof. dr. Mirko Omejc, dr.med., dr. Neva Volk, dr.med., izr. prof. dr. 17.30-17.40	<u>Odmor</u>
	<i>Moderatorji: doc. dr. Blaž Trolovšek, dr.med., asist. dr. Tanja Mesti, dr.med., doc. dr. Peter Popović, dr.med.</i>
17.40-18.50	<b><u>MULTIDISCIPLINARNI PRISTOP K ZDRAVLJENJU BOLNIKA S HCC</u></b>
	<i>Mesti T.: Vloga sistemskega zdravljenja</i>
	<i>Trolovšek B.: Vloga kirurgije</i>
	<i>Popović P.: Vloga interventne radiologije</i>
18.50-20.20	<b><u>MULTIDISCIPLINARNI PRISTOP K ZDRAVLJENJU BOLNIKOV Z RAKI PREBAVIL – PRIKAZI PRIMEROV</u></b>
20.20-20.50	<b><u>SKLEPI IN ZAKLJUČEK SREČANJA</u></b>

# NAPREDOVALI RAK DEBELEGA ČREVEŠA IN DANKE - KLINIČNA DOBROBIT ZDRAVLJENJA V III. IN KASNEJŠIH LINIJAH

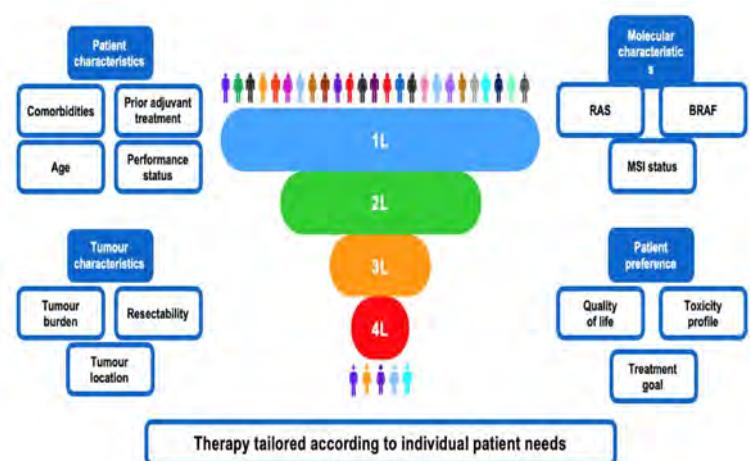

asist. mag. Zvezdana Hlebanja, dr.med.  
Zdravnica specialistka internistične  
onkologije

## NAČIN ZDRAVLJENJA MCRC

### ❖ Določajo 4 glavne kategorije:

- značilnosti bolnika,
- značilnosti tumorja,
- molekularne značilnosti tumorja,
- bolnikove preference

### ❖ Terapija mora biti individualno prilagojena

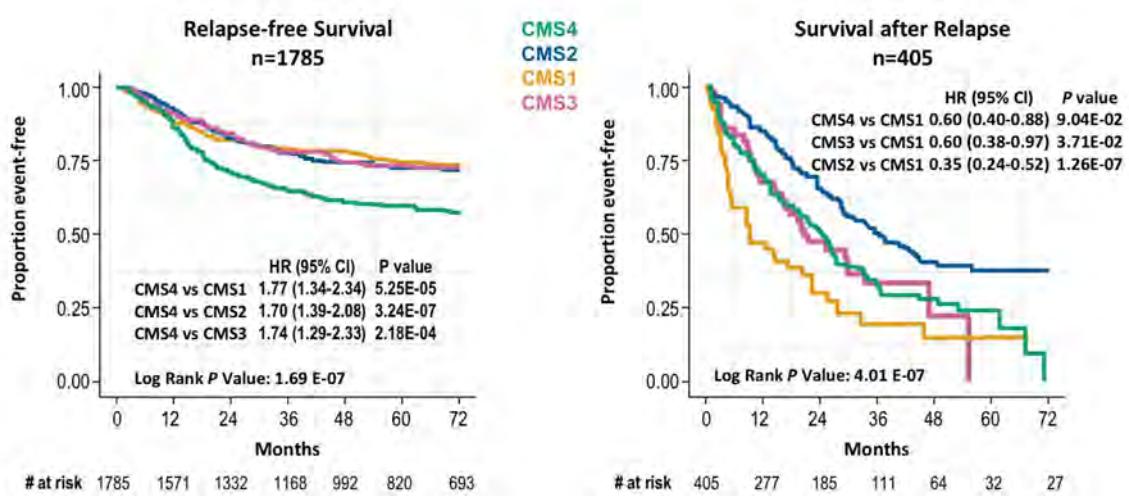

## KOLOREKTALNI RAK JE VEČ KOT ENA BOLEZEN: BOLNIKE Z METASTATSKIM KOLOREKTALNIM RAKOM DELIMO V 4 MOLEKULARNE PODTIPE, KI IMAJO RAZLIČNE POTEKE:

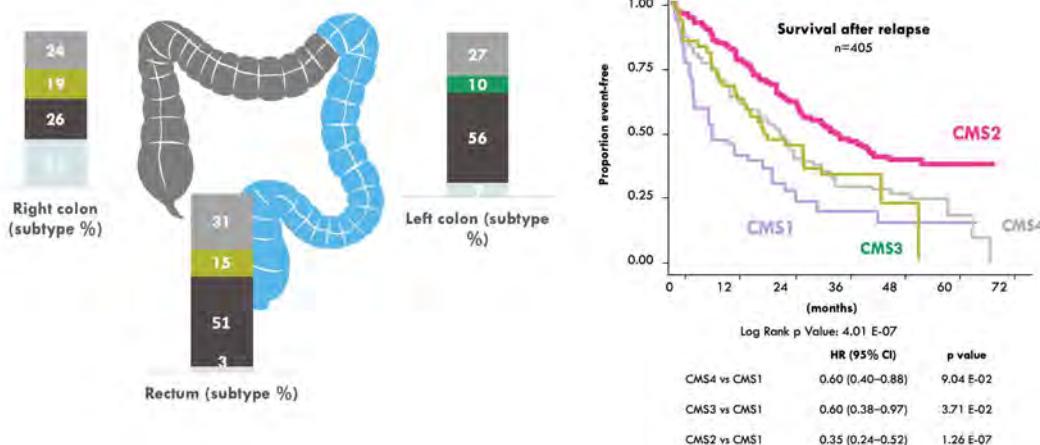

### Key Features of the Consensus Molecular Subtypes (CMS)

CMS1 MSI Immune	CMS2 Canonical	CMS3 Metabolic	CMS4 Mesenchymal
14%	37%	13%	23%
MSI, CIMP high Hypermutation	SCNA high	Mixed MSI status SCNA low, CIMP low	SCN high
<i>BRAF</i> mutations		<i>KRAS</i> mutations	
Immune infiltration and activation	WNT and MYC activation	Metabolic deregulation	Stromal infiltration TGF beta activation Angiogenesis
Worse survival after relapse	Better survival after relapse		Worse relapse-free and overall survival

## MOLEKULARNI PODTIPI MCRC NAPOVEDUJEJO DOLŽINO PREŽIVETJA IN ODGOVOR NA ZDRAVLJENJE

## NAJBOLJŠO PROGNOZO IMAJO LEVO LEŽEČI TUMORJI ČREVESA S CMS2 MOLEKULARNO ZASNOVO!

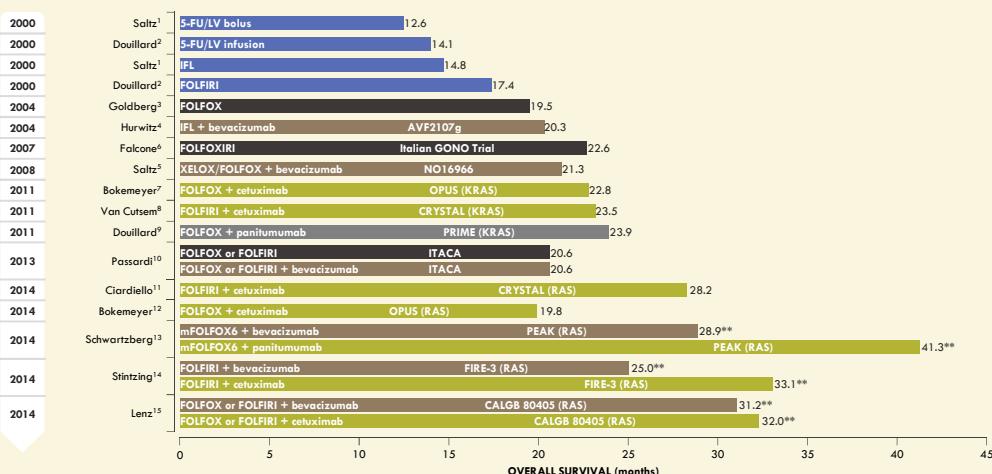

## IZBIRA PRVOLINIJSKEGA ZDRAVLJENJA ODLOČILNO VPLIVA NA DOLŽINO CELOKUPNEGA PREŽIVETJA

Parameter*	1st line <sup>1-4</sup>	2nd line <sup>5-7</sup>	Later lines <sup>8,9</sup>
Response rate	<b>35–69%</b>	16–41%	1–22%
PFS	<b>8–14 months</b>	4–9 months	2–4 months
OS	<b>19–42 months</b>	11–21 months	6–10 months

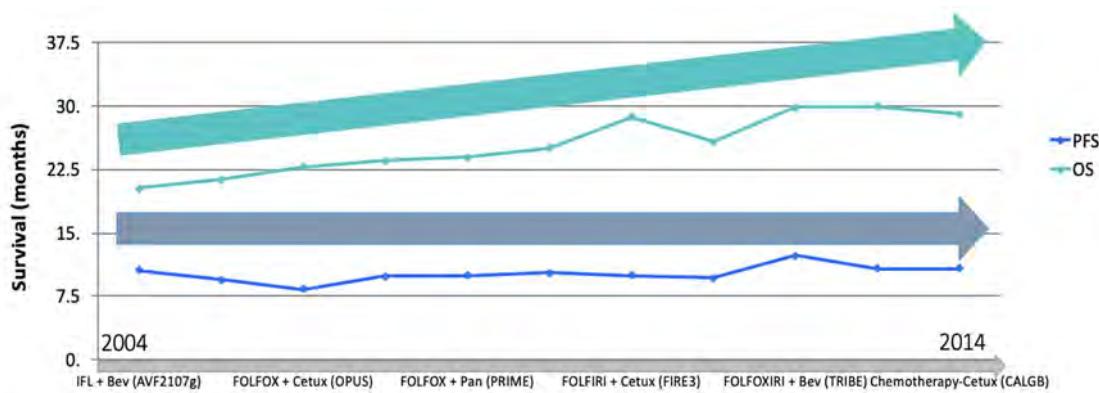

\*Range of results for targeted treatment arms of key Phase II and III trials.

1st line therapy is a critical determinant of OS<sup>1-9</sup>

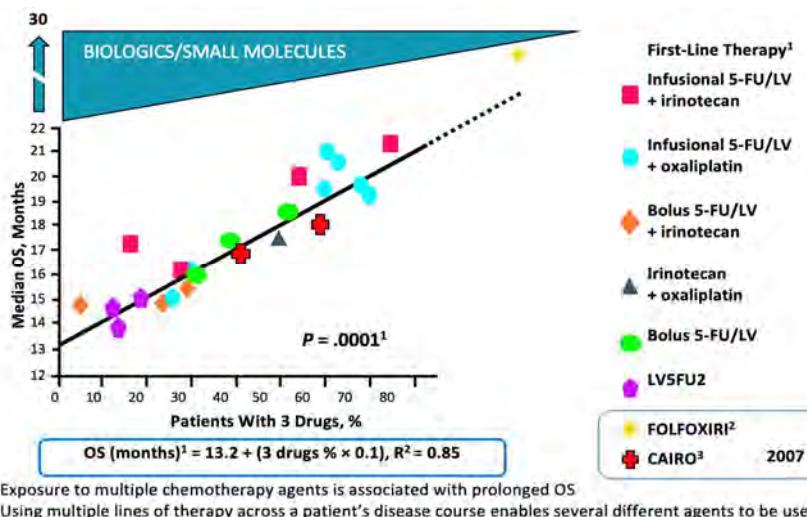

## IZBOLJŠAVE V NAČINIH PRVOLINIJSKEGA ZDRAVLJENJA KAŽEJO IZBOLJŠAVO MOS

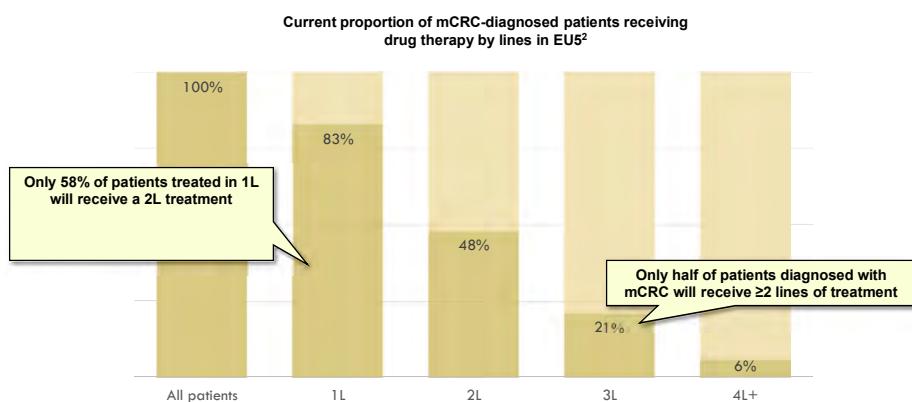

...VENDAR SE CELOKUPNO PREŽIVETJE MCRC PODALJŠUJE ZLASTI ZARADI UČINKOVITIH TERAPIJ V KASNEJŠIH LINIJAH ZDRAVLJENJA

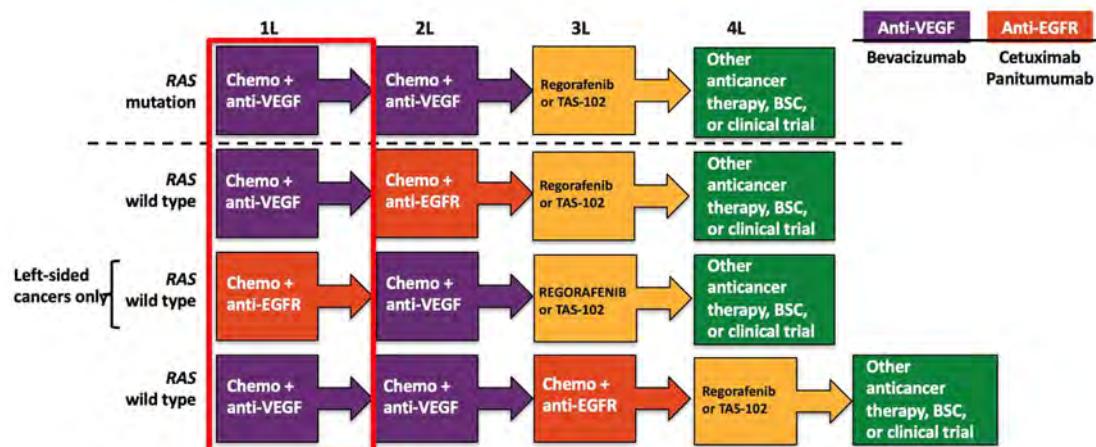

## KOMBINIRANJE ZDRAVILNIH UČINKOVIN PODALJŠUJE CELOKUPNO PREŽIVETJE

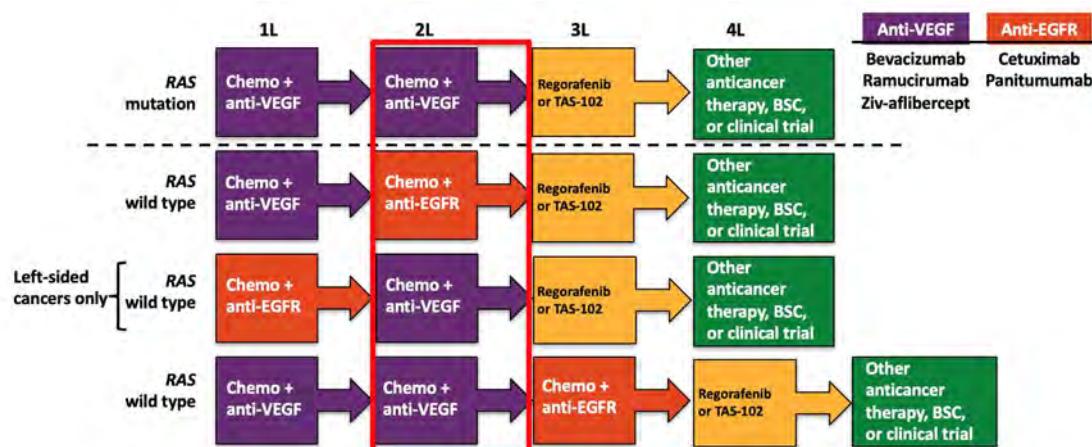

## ZA VSAKO NADALJNO LINIJO ZDRAVLJENJA JE PRIMERNIH MANJ KANDIDATOV

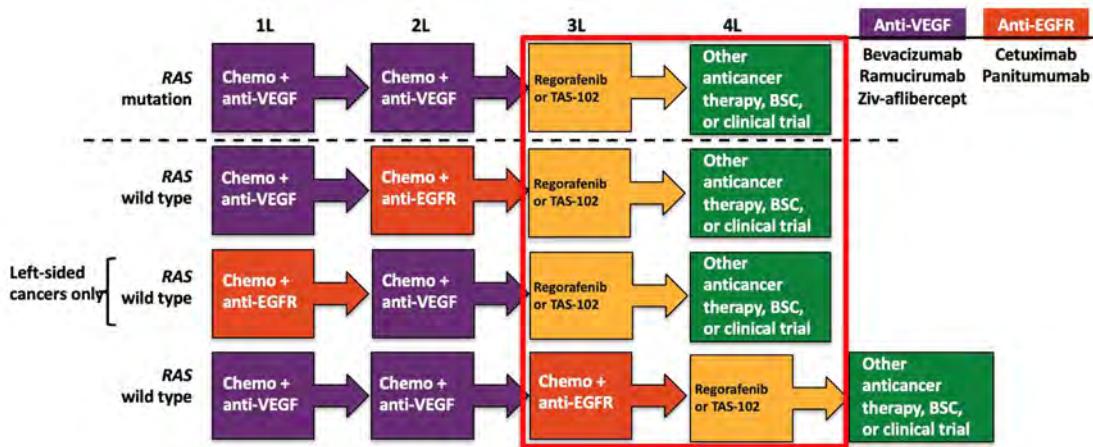

## PRIPOROČILA ZA ODLOČITEV O ZDRAVLJENJU MCRC - I. LINIJA

## PRIPOROČILA ZA ODLOČITEV O ZDRAVLJENJU MCRC - II. LINIJA

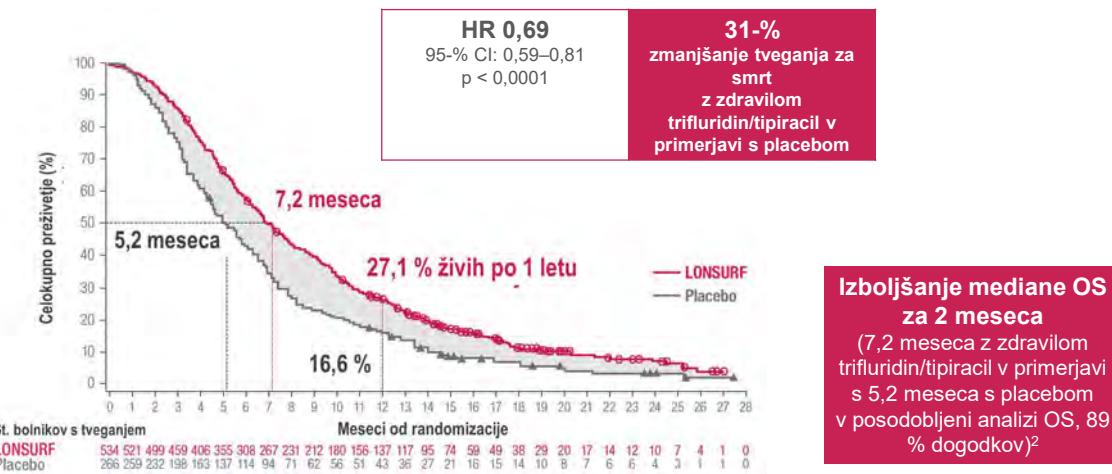

# PRIPOROČILA ZA ODLOČITEV O ZDRAVLJENJU MCRC - III. IN NADALJNE LINIJE

## ODLOČITEV O ZDRAVLJENJU V III. IN KASNEJŠIH LINIJAH

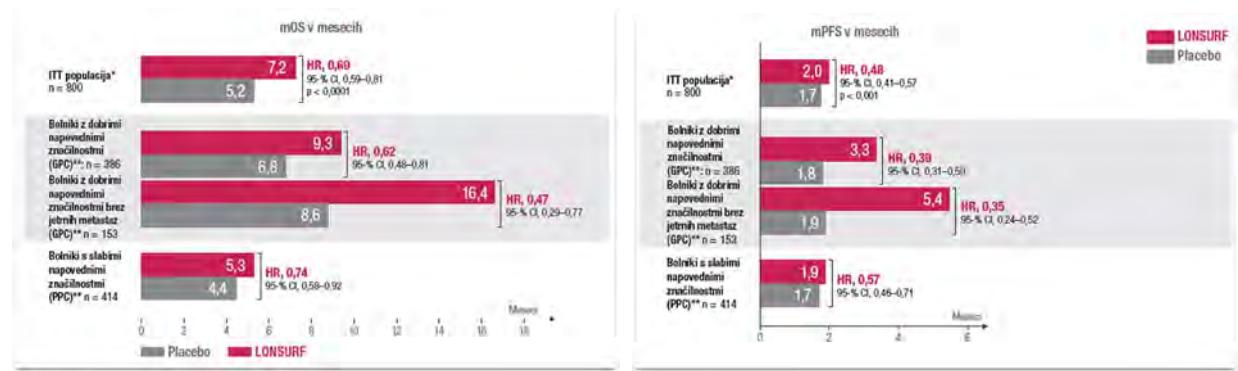

- ❖ Odločitev o vrstah zdravljenja metastatskega kolorektalnega raka v III. liniji je odvisno od kondicije bolnika, molekularnih značilnosti tumorja in od vrste predhodnih zdravljenj.
- ❖ Glede na priporočila prihajajo v poštev v III. liniji zdravljenja:
  - TAS-102 (Lonsurf),
  - Regorafenib (Stivarga),
  - Za RAS nemutirane bolnike v izrazito dobri kondiciji pa tudi reindukcijsko zdravljenje z antiEGFR zdravili
- ❖ TAS-102 (Lonsurf):
  - Zdravilni učinkovini: trifluridin/tipiracil
  - Je oralni citostatik iz skupine antimetabolitov
  - Primeren za zdravljenje bolnikov v III. liniji, ki niso sposobni za intenzivno citostatsko zdravljenje
  - Primeren tudi za srčne bolnike, saj ne povzroča koronarnih vazospazmov

## TRIFLURIDIN/TIPIRACIL – POMEMBNO IZBOLJŠANJE MEDIANE OS PRI BOLNIKIH Z MKRR V III. LINIJI

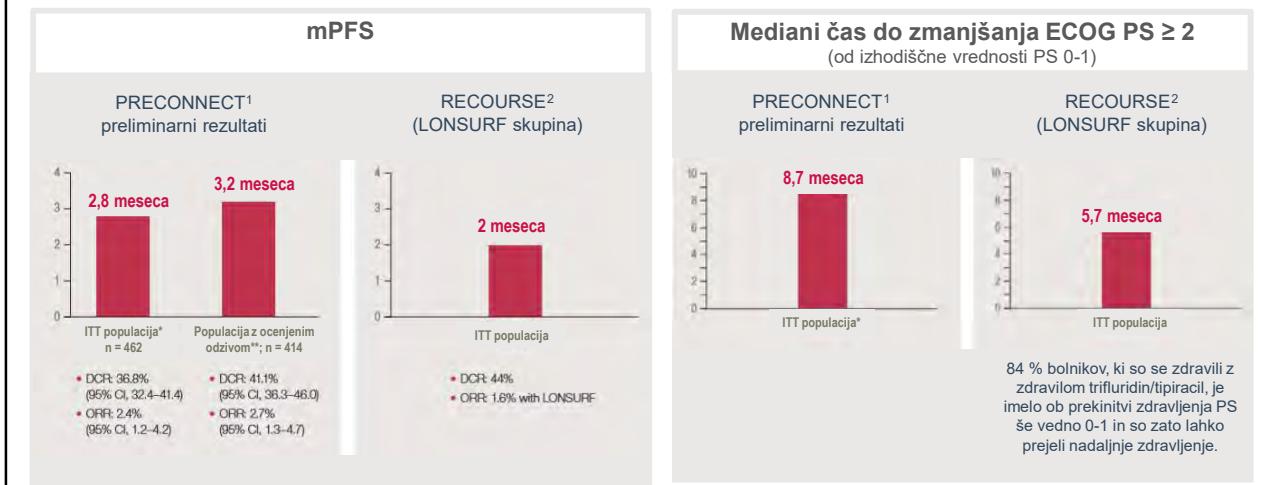

## TRIFLURIDIN/TIPIRACIL – POMEMBNO PODALJŠA OS IN PFS PRI BOLNIKIH Z METASTATSKIM KLOREKTALNIM RAKOM

❖ Učinkovitost zdravila trifluridin/tipiracil je bila dokazana pri vseh podskupinah bolnikov z mKRR

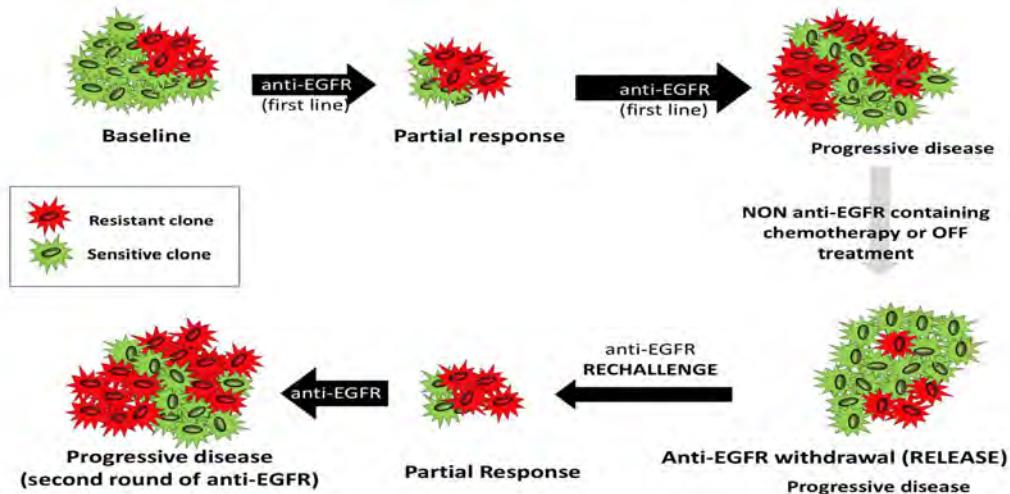

# RAZISKAVA PRECONNECT - DODATNI DOKAZI O UČINKOVITOSTI ZDRAVILA TRIFLURIDIN/TIPIRACIL

## REINDUKCIJSKO ZDRAVLJENJE Z ANTI-EGFR ZDRAVILI

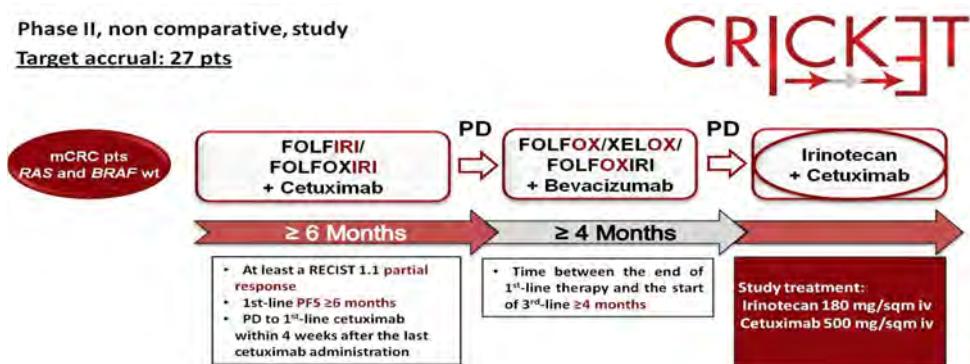

- ❖ Za RAS nemutirane bolnike v izrazito dobri kondiciji, brez hujših pridruženih bolezni, prihaja v III. liniji zdravljenja v poštev reindukcijsko zdravljenje z antiEGFR zdravili
- ❖ Tovrstno zdravljenje je smiselno pri bolnikih, ki so izrazito dobro odgovorili na prvolinijsko zdravljenje z antiEGFR zdravili, in so v II. liniji prejeli zdravljenje z drugačnim citostatikom +- drugačnim biološkim zdravilom
- ❖ Njihov RAS status mora ostati nemutiran

## HIPOTEZA KLONALNE DINAMIKE MED ZDRAVLJENJEM Z ANTI-EGFR ZDRAVILI

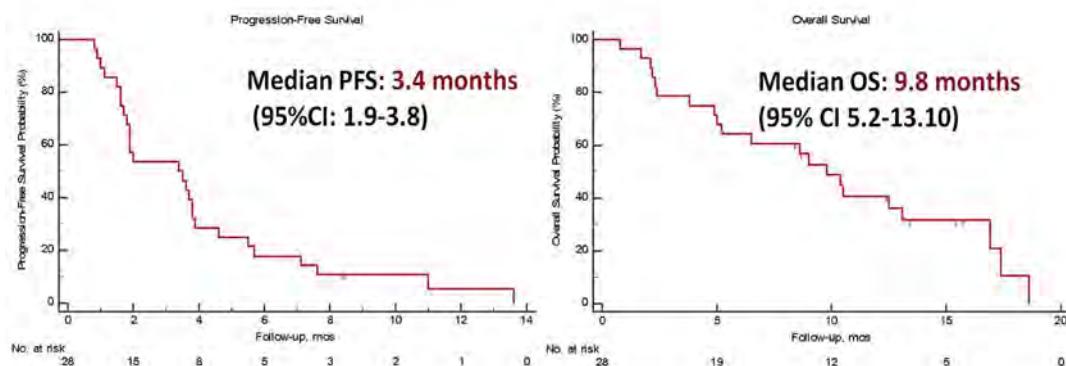

## CRICKET ŠTUDIJA - DOKAZI O UČINKOVITOSTI REINDUKCIJE Z ANTI-EGFR ZDRAVILI

Phase II, non comparative, study  
Target accrual: 27 pts

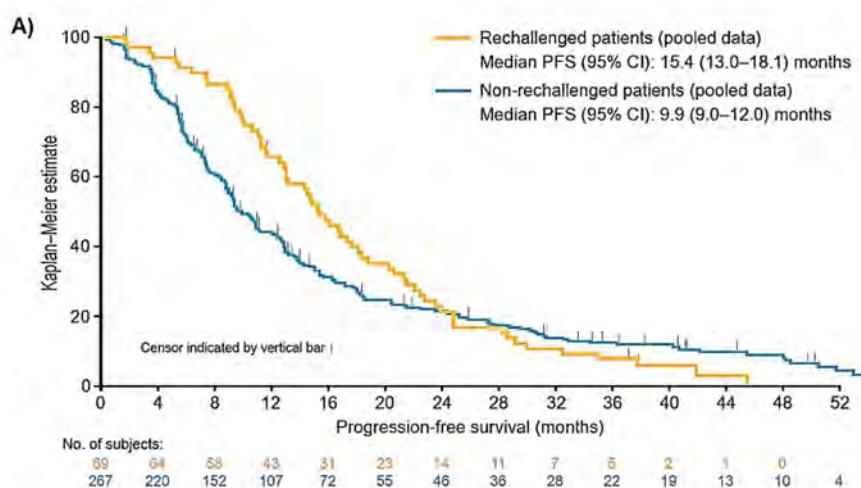

Presented By Daniele Rossini at 2018 ASCO Annual Meeting

## CRICKET ŠTUDIJA - DOKAZI O UČINKOVITOSTI REINDUKCIJE Z ANTI-EGFR ZDRAVILI

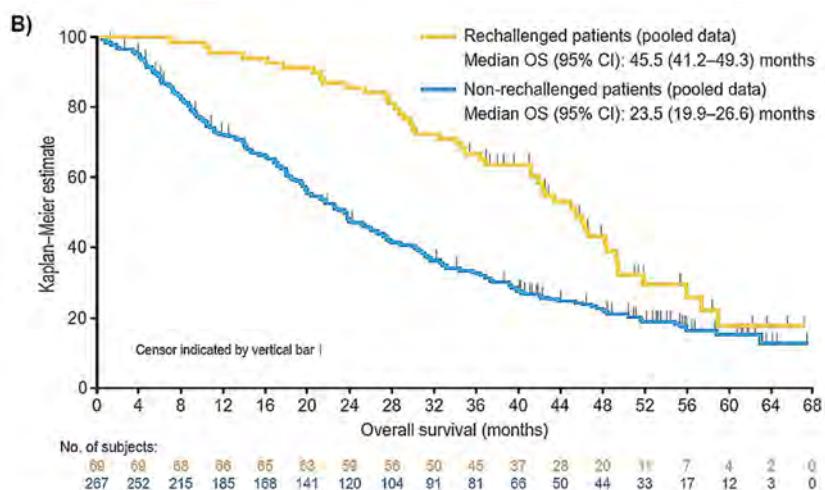

Presented By Daniele Rossini at 2018 ASCO Annual Meeting

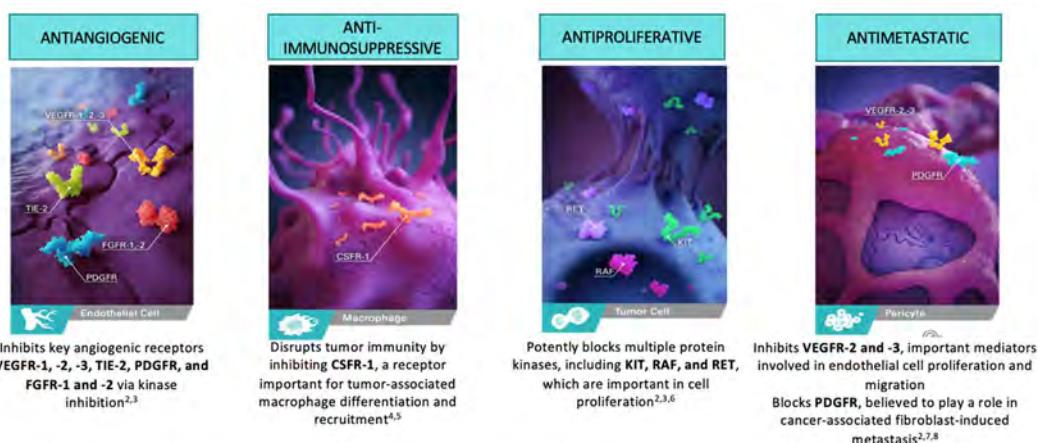

## PFS BOLNIKOV REINDUKCIJSKO ZDRAVLJENIH Z ANTI-EGFR (PRIME, PEAK - RETROSPEKTIVNA ANALIZA)

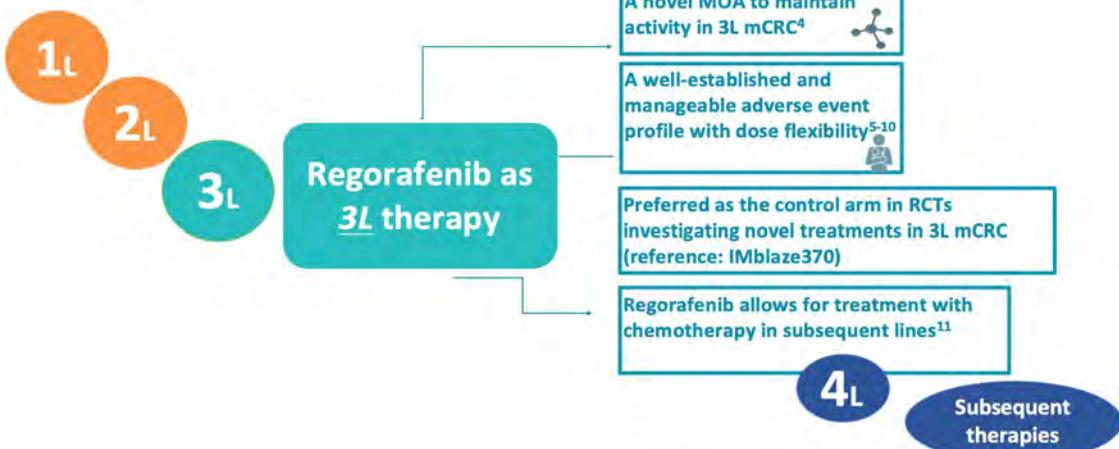

## OS BOLNIKOV REINDUKCIJSKO ZDRAVLJENIH Z ANTI-EGFR (PRIME, PEAK - RETROSPEKTIVNA ANALIZA)

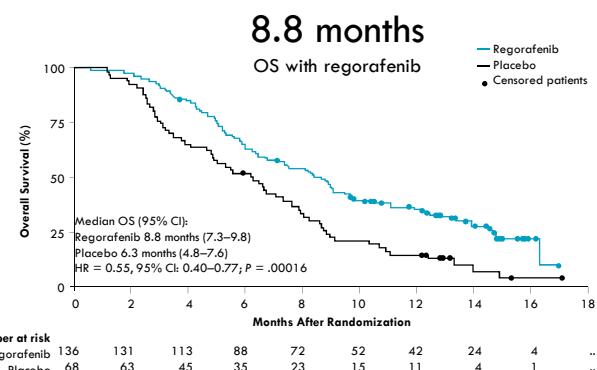

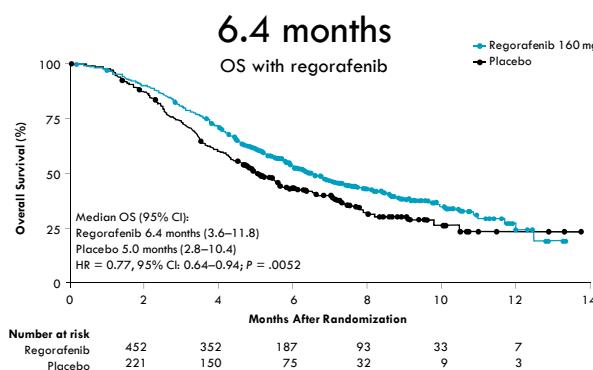

## MULTITARČNI TIROZIN KINAZNI INHIBITOR REGORAFENIB IMA ŠTEVILNE PROTITUMORSKE ZNAČILNOSTI

## PRIPOROČILA SVETUJEJO REGORAFENIB V III. LINIJI ZDRAVLJENJA, ZA DOVOLJ FIT BOLNIKE, NE GLEDE NA RAS STATUS

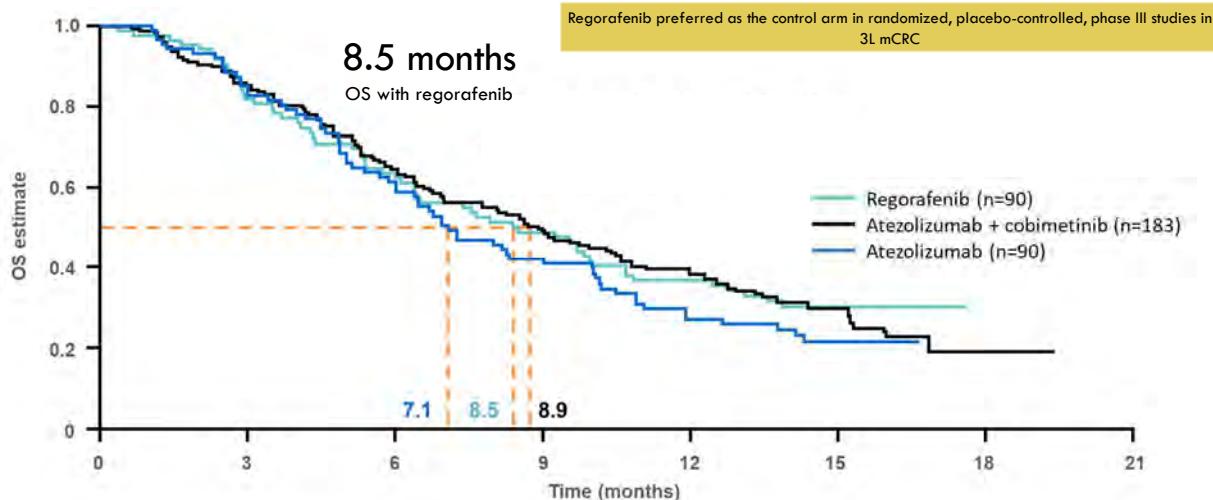

## REGISTRACIJSKI ŠTUDIJI ZA REGORAFENIB: CORRECT IN CONCUR

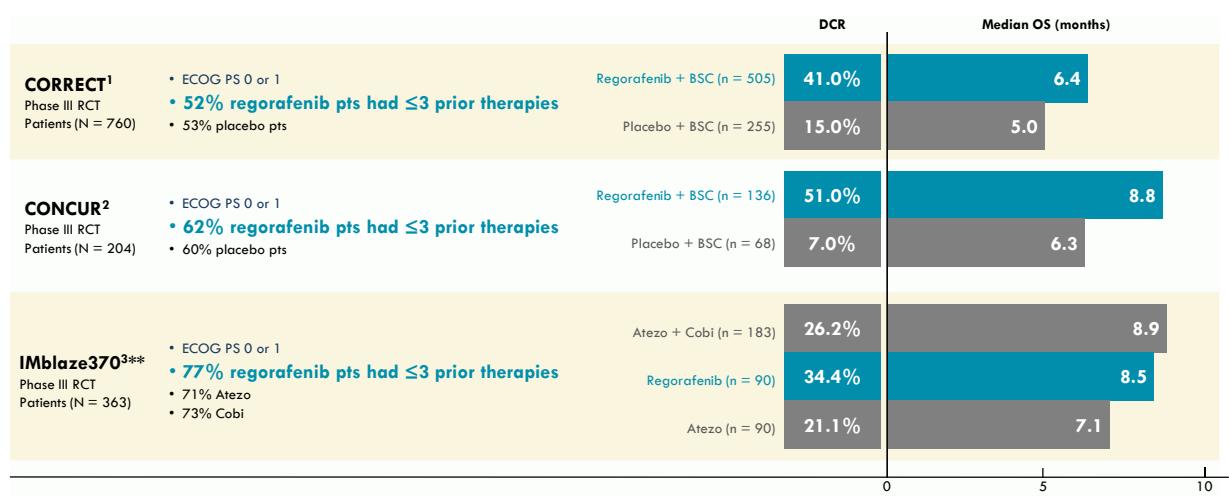

**CORRECT<sup>1</sup>:** 23% reduction in  
the risk of death (primary endpoint)

**CONCUR<sup>2</sup>:** 45% reduction in  
the risk of death (primary endpoint)

## REZULTATI NOVEJŠE RAZISKAVE FAZE III BOLNIKOV ZDRAVLJENIH Z REGORAFENIBOM: IMBLAZE370

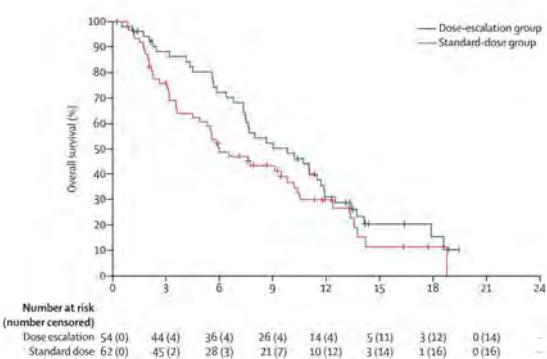

## DOBROBIT ZDRAVLJENJA Z REGORAFENIBOM JE VEČJA PRI BOLNIKIH Z MANJ PREDHODNIMI LINIJAMI ZDRAVLJENJA

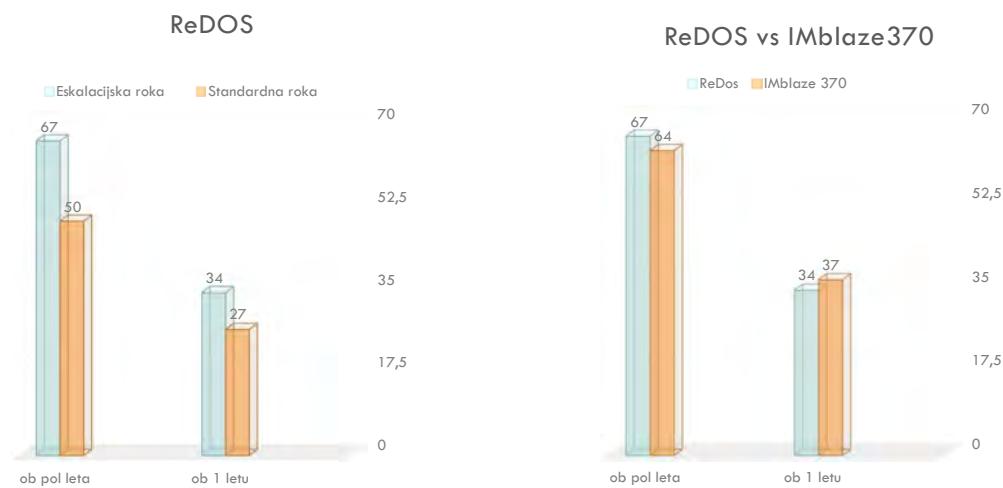

# NAJNOVEJŠA KLINIČNA RAZISKAVA BOLNIKOV ZDRAVLJENIH Z REGORAFENIBOM - REDOS

- ❖ Študija ReDOS je ob skrbnem uvajanjу odmerkov regorafeniba dokazala še daljša preživetja.
- ❖ Dokazali so, da je smiselno zdravljenje z regorafenibom začeti s polovičnim odmerkom (80mg), ter le tega postopno zviševati, v kolikor so bolniki to prenesli.
- ❖ V primerjavi z bolniki, ki so začeli zdravljenje s polnim odmerkom (160mg), so imeli bolniki v eskalacijski roki daljše mOS.
- ❖ mOS za eskalacijsko roko je 9.8 meseca, za standardno roko pa 6 mesecev

## PREŽIVETJE PRI POL LETA IN ENEM LETU!

## ZAKLJUČEK

- ❖ Napredovali kolorektalni rak ni ena bolezen
- ❖ Molekularni podtipi napovedujejo potek bolezni, kot tudi odgovor na zdravljenje, tako s citostatiki kot z biološkimi zdravili
- ❖ Boljša preživetja teh bolnikov so posledica novih načinov zdravljenja, predvsem pa posledica več linijskega zdravljenja
- ❖ Število bolnikov primernih za sistemsko zdravljenje se z vsako nadaljnjo lino zdravljenja zmanjšuje
- ❖ Prvolinijsko zdravljenje prinese največ k celokupnemu preživetju (običajno dvojček ali trojček citostatikov + biološko zdravilo)
- ❖ Drugolinijsko zdravljenje (običajno zamenjamo tako citostatik v dvojčku kot biološko zdravilo)

## ZAKLJUČEK

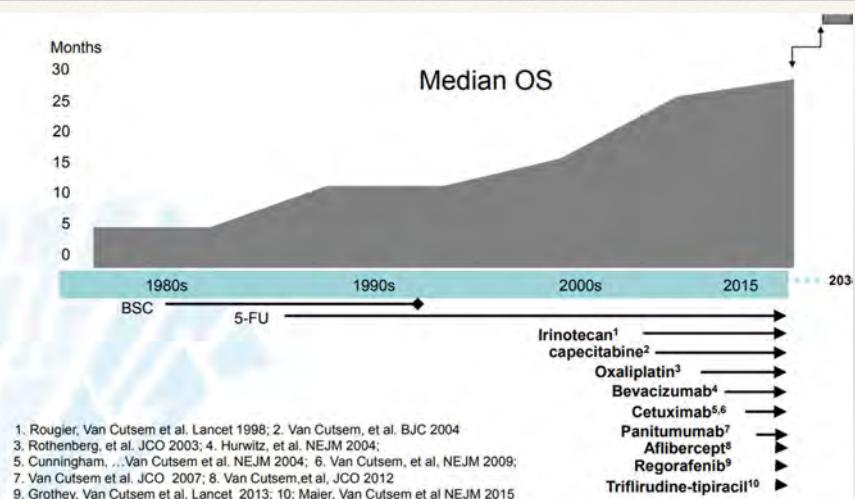

- ❖ V III. liniji zdravljenja bolnikov z metastatskim kolorektalnim rakom je le to odvisno od PS bolnika, pridruženih bolezni, ciljev zdravljenja, preferenc bolnika in narave tumorja
- ❖ Na voljo je reindukcijsko zdravljenje z antiEGFR zdravili za bolnike v odlični kondiciji, z RAS nemutiranimi tumorji
- ❖ Dva nova agensa: TAS-102 in regorafenib, sta primerna v III. liniji zdravljenja predvsem za bolnike z refraktarnimi tumorji in običajno vodita v stabilizacijo bolezni
- ❖ TAS-102 / Lonsurf je citostatik (kombinacija trifluridin/tipiracila), je peroralno zdravilo, primereno za bolnike, ki niso sposobni za intenzivno citostatsko zdravljenje in tiste s pridruženo srčno boleznjijo
- ❖ Regorafenib / Stivarga je multitarčni tirozin kinazni inhibitor, peroralno zdravilo, primeren za bolnike v dobri kondiciji ( $PS > 2$ ), ne glede na RAS status
- ❖ Preživetja bolnikov zdravljenih z regorafenibom se glede na zadnje študije podaljšujejo, ker bolnikom prilagajamo uvajalno dozo, ker zdravilo dobijo bolniki v dobri kondiciji, v zgodnejših linijah zdravljenja, ter zaradi boljšega obvladovanja toksičnih sopojavov

# Individualen pristop k odmerjanju zdravil v poznih linijah zdravljenja napredovalega raka debelega črevesa in danke

Dr. Neva Volk, dr. med.  
Onkološki inštitut Ljubljana  
Sektor za internistično onkologijo

9. šola tumorjev prebavil, 22.11.2019

## Sistemsko zdravljenje mRDČD skozi čas

## Tretja linija zdravljenja metastatskega raka debelega črevesa in danke

- Po progresu na KT z fluoropirimidini, oksaliplatinom in irinotekanom, v kombinaciji z tarčnimi zdravili (anti VEGF, anti EGFR) v EU dodatne možnosti zdravljenja:

regorafenib (EMA 2013)

trifluridin tipiracil hidroklorid (EMA 2016)

pa tudi „rechallenge“ koncept: sekvenca?

Category	R0 patients <sup>a</sup>	Disease control (control of progression)				
Treatment goal	Cytoreduction (tumor shrinkage)	RAF wt	BRAF wt	RAF wt	BRAF wt	
Molecular profile	RAF wt	RAF wt	BRAF wt	RAF wt	BRAF wt	
Third line						
Preferred choice (x)	CT doublet + EGFR antibody <sup>c,d</sup> or Rituximab + cetuximab <sup>e</sup>	Regorafenib or trifluridine/ tipiracil	Regorafenib or trifluridine/ tipiracil	CT doublet + EGFR antibody <sup>f</sup> or irinotecan + cetuximab	Regorafenib or trifluridine/tipiracil	Regorafenib or trifluridine/tipiracil
Second choice	EGFR antibody monotherapy <sup>f</sup>			EGFR antibody monotherapy <sup>f</sup>		
Third choice	Regorafenib or trifluridine/ tipiracil			Regorafenib or trifluridine/ tipiracil		

Van Cutsem E, Cervantes A, Arnold D et al, ESMO Consensus 2016  
Ann Oncol, July 2016

## Cilji zdravljenja se spreminja glede na linijo zdravljenja

### Linija sistemskega zdravljenja

#### „Realističen“ cilj zdravljenja

##### Adjuvantno

„ozdravitev“; zmanjšanje tveganja za ponovitev

##### I. linija

trajen odgovor; dolgorajno stanje z nič/malo tumorskega bremena

##### II. linija

odgovor na zdravljenje; dolgorajna kontrola bolezni

##### III. linija

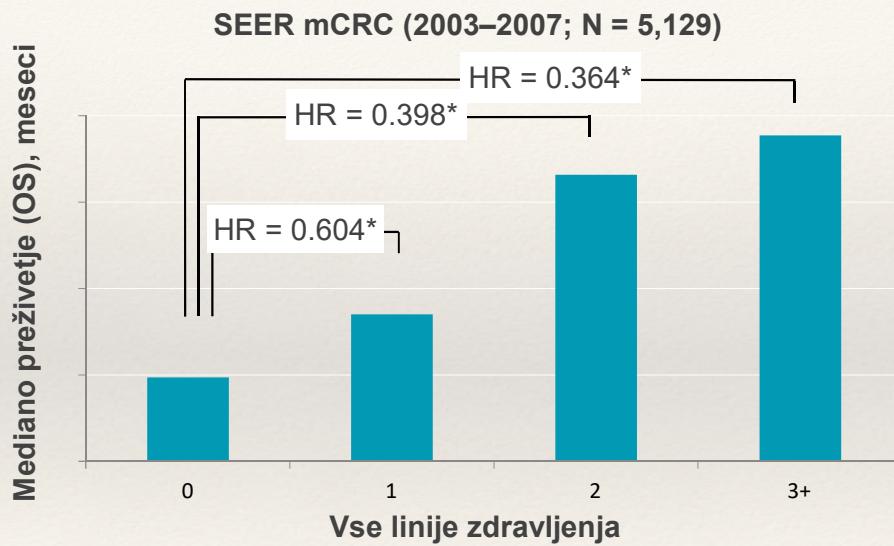

dolgorajna kontrola bolezni; vzdrževanje QOL, stanja zmogljivosti

##### Kasnejše linije

kontrola bolezni, vzdrževanje QOL; paliacija

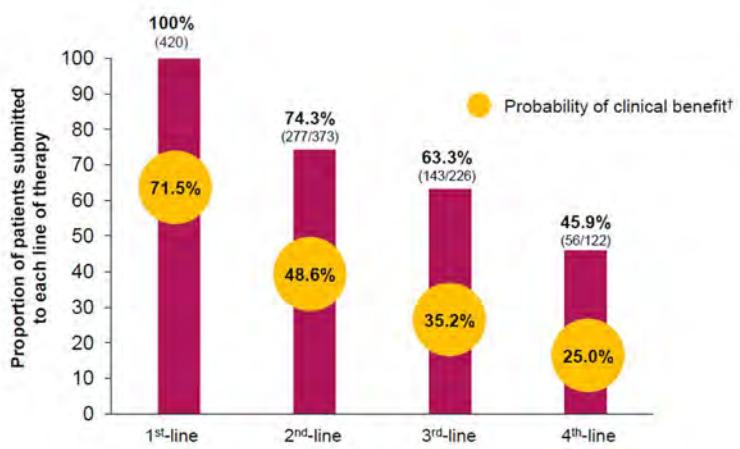

## Več linij zdravljenja – daljše preživetje

HR, hazard ratio; SEER, Surveillance, Epidemiology, and End Results.  
Hanna N, et al. *J Clin Oncol*. 2014;32(suppl 3):abstract 559.

## Deleži bolnikov z mCRC po linijah zdravljenja in verjetnost klinične dobrobiti

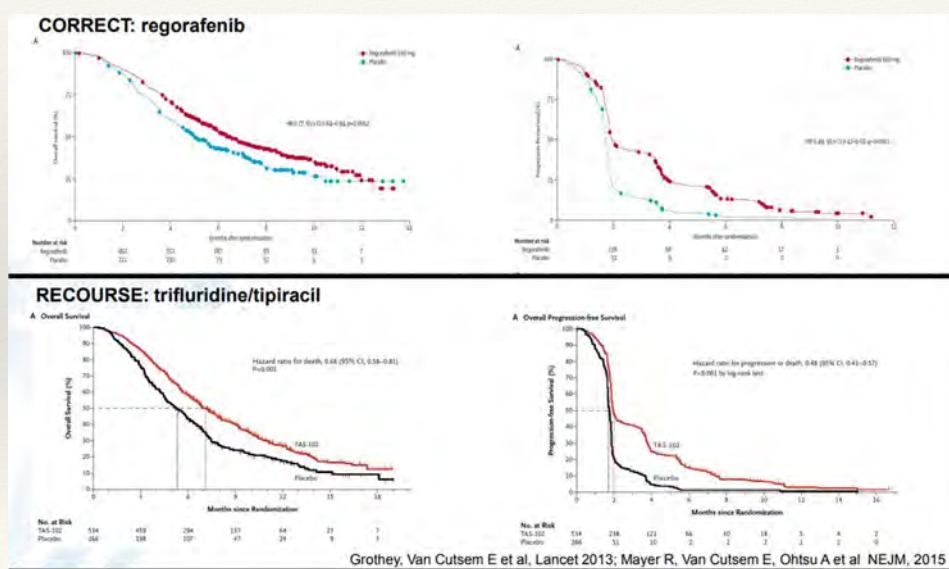

Tampellini M et al. *Clin colorectal Cancer* 2017; 16: 372-6

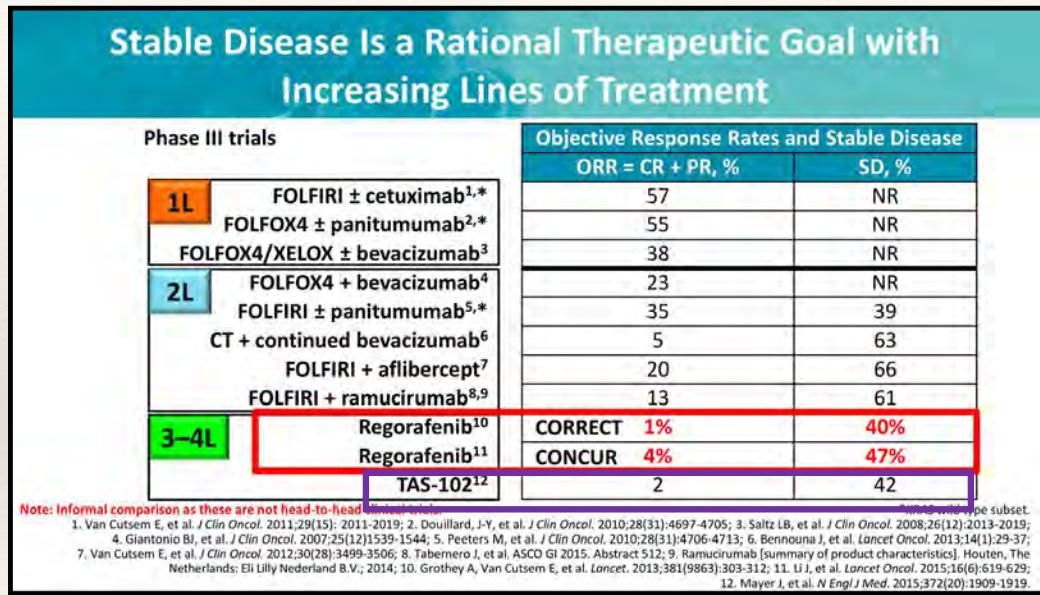

## Izbor bolnikov za 3. linijo

- ❖ Ni posebnih kriterijev za izbor bolnikov – (PS, starost, komorbidnost; cilji zdravljenja in preference bolnika, predhodne linije in posledice....); dejavniki, pomembni za izbor 1. linije >> pomembnejši za izbor 3. in kasnejših linij
- ❖ Ni pomemben RAS status, lokacija primarnega tumorja

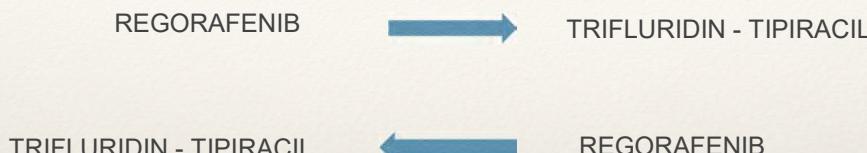

Bekaii-Saab T et al. Clin Colorectal Cancer, Volume 18, Issue 1, e117 - e129

## Regorafenib in trifluridin/tipiracil v zdravljenju mRDČD

## Optimalna sekvenca?

**Varnostni profil različen, ni pa drugih napovednih dejavnikov za izbor, tudi ni posebnih skupin bolnikov, bolj primernih za določeno zdravljenje**

## Regorafenib

- ❖ Dozirna shema 160 mg/dan 3 tedne, nato en teden pavze.
- ❖ Toda: samo 20% bolnikov tolerira 160 mg permanentno, potrebne prilagoditve uvajalnega odmereka zaradi NU, zlasti SRN in utrudljivosti<sup>1,2,3</sup>
- ❖ **76% bolnikov v študiji CORRECT mora modificirati odmerek<sup>1</sup>**
- ❖ **70% bolnikov vsaj enkrat prekine jemanje regorafeniba**

1. Grothey A, Van Cutsem E, Sobrero A, et al. Lancet. 2013; 381: 303-312  
2. Li J, Qin S, Xu R et al. Lancet Oncol. 2015 Jun;16(6):619-29  
3. Eng C et al. Lancet Oncol. 2019 Jun;20(6):849-861

## Odmerek regorafeniba

- ❖ Priporočeni uvodni odmerek regorafeniba – v raziskavah ni primeren za vse bolnike, zato zasnovanih več raziskav o primernejšem režimu uvajanja zdravila
- ❖ Izboljšanje prenosljivosti, hkrati obdržati učinkovitost zdravila (prof. Grothey, Mayo) → raziskava ReDOS: začetni odmerek 80mg Stivarge® = 50% odmerek

Bekaii-Saab TS et al. Lancet Oncol. 2019 Aug;20(8):1070-1082

## Raziskava ReDOS

- ❖ Randomizirana, odprta faza II
  - R.1 eskalacijski z začetnim polovičnim odmerkom, ki se tedensko zvišuje. **80mg → 120mg → 160mg**
  - R.2 standardni način z začetnim priporočenim odmerkom **160 mg**
- ❖ Trajanje: 3 tedne, nato teden pavze
- ❖ V obeh rokah se 2. cikel začne z odmerkom, ki se v 1. ciklu pokaže kot maksimalno tolerabilen
- ❖ Pri obeh rokah se odmerek modificira glede na pojav NU

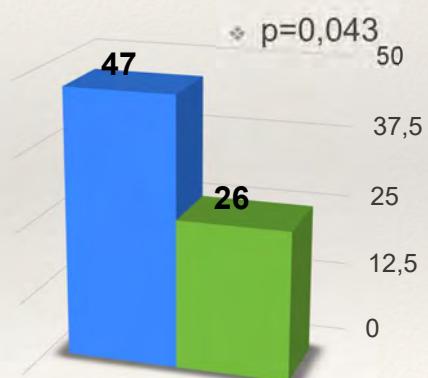

Bekaii-Saab TS et al. Lancet Oncol. 2019 Aug;20(8):1070-1082

## ReDOS

Primarni cilj: delež bolnikov, ki je zaključil 2 ciklusa zdravljenja v 8 tednih in vstopil v 3. cikel

- ❖ 116 bolnikov, od tega v 3. cikel vstopi:
- ❖ v eskalacijski roki: 23 bolnikov od 54 - **47%**
- ❖ v standardni roki: 16 bolnikov od 62 - **26%**
- ❖ **Delež bolnikov, ki je začel 3. ciklus zdravljenja značilno višji v eskalacijski roki**

■ Eskalacijski % ■ Standardni %

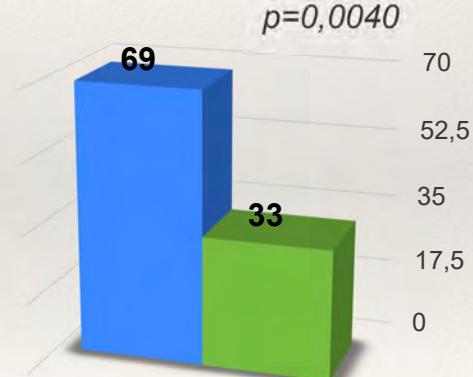

Bekaii-Saab TS et al. Lancet Oncol. 2019 Aug;20(8):1070-1082

## ReDOS

### Bolniki, ki niso vstopili v 3. cikel zdravljenja s Stivargo, a do dobili naslednjo terapijo

- ❖ V eskalacijski roki:  
**18 bolnikov od 26 - 69%**
- ❖ V standardni roki:  
**14 bolnikov od 42 - 33%**

■ Eskalacijski % ■ Standardni %

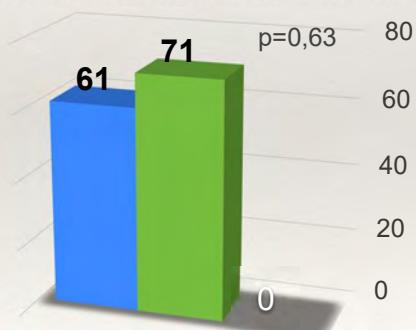

Bekaii-Saab TS et al. Lancet Oncol. 2019 Aug;20(8):1070-1082

## ReDOS

### Bolniki, ki so vstopili v 3. cikel s Stivargo in so dobili nadaljnjo terapijo

- ❖ V eskalacijski roki:  
**11 od 18 bolnikov (61%)**
- ❖ V standardni roki:  
**5 od 7 bolnikov (71%)**

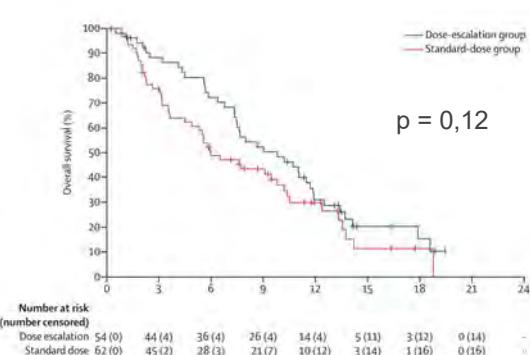

■ Eskalacijski % ■ Standardni %

Bekaii-Saab TS et al. Lancet Oncol. 2019 Aug;20(8):1070-1082

## ReDOS - sekundarni cilj: mOS

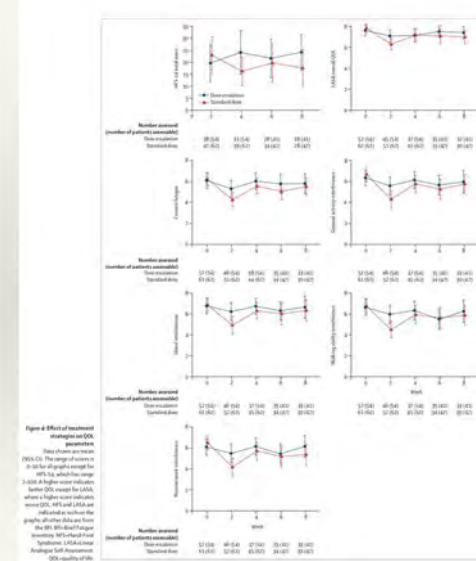

- ❖ Preživetje v okviru pričakovanega (CORRECT)
- ❖ Eskalacijska roka: mOS 9,8 mes.
- ❖ Standardna roka: mOS 6,0 mes.

Bekaii-Saab TS et al. Lancet Oncol. 2019 Aug;20(8):1070-1082

## ReDOS: kvaliteta življenja

- ❖ Celokupno imajo bolniki v eskalacijski roki **boljšo kvaliteto življenja**, čeprav neznačilno.
- ❖ **Zlasti drugi teden** je v eskalacijski roki kvaliteta življenja boljša (manjša kumulacija metabolitov)

Bekaii-Saab TS et al. Lancet Oncol. 2019 Aug;20(8):1070-1082

## ReDOS: varnost

- ❖ Varnost v obeh rokah je primerljiva
- ❖ V eskalacijski roki je manj utrudljivosti, SRN in hipertenzije gr. 3
- ❖ V eskalacijski roki je več abdominalne bolečine gr. 3.
- ❖ **Prva 2 ciklusa v eskalacijski roki je manj hipertenzije, utrudljivosti, SRN in driske.**

	Dose escalation group (n=54)				Standard-dose group (n=62)			
	Grade 3-2	Grade 3	Grade 4	Grade 5	Grade 3-2	Grade 3	Grade 4	Grade 5

(Table 2 continues on next page)

Bekaii-Saab TS et al. Lancet Oncol. 2019 Aug;20(8):1070-1082

## 1. alternativni način odmerjanja regorafeniba

- ❖ 80 mg odmerek varen in učinkovit alternativni način za uvedbo; večje število bolnikov na ta način dobi 3. cikel zdravljenja, ki ga bolje tolerirajo. V eskalacijski roki dobi več bolnikov nadaljnjo terapijo kot v standarni - više mOS v eskalacijski skupini

Bekaii-Saab T et al. Clin Colorectal Cancer, Volume 18, Issue 1, e117 - e129

## Konsenz ekpertov 2019

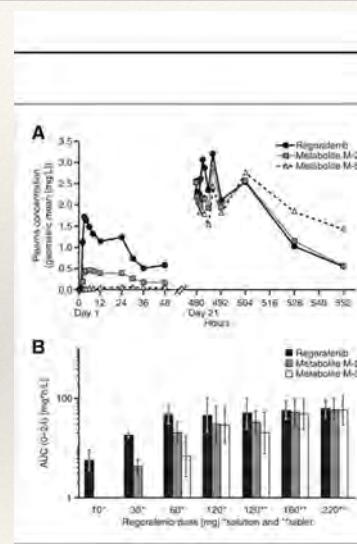

- ❖ Alternativne sheme odmerjanja niso odobrene<sup>1</sup>
- ❖ Prekiniti zdravljenje pri resnih ali življenje ogrožajočih NU gr  $\geq 3$ , simptomatski hipertenziji gr  $\geq 2$ , ali SRN gr 2, ki ne izzveni v 1 tednu po redukciji odmerka. Ponovna uvedba regorafeniba: odmerek zmanjšati za 40 mg<sup>2</sup>
- ❖ Prekiniti zdravljenje, če bolnik odmerka 80 mg ne tolerira ali v primeru življenje ogrožajoče hepatotoksičnosti<sup>2</sup>
- ❖ Kontrole: 1. in 2. ciklus – kontrola na 1 ali 2 tedna, nato na 4 tedne<sup>1</sup>

1. Bekaii-Saab T et al. Clin Colorectal Cancer, Volume 18, Issue 1, e117 - e129  
2. Stivarga® SmPC

## 2. alternativni način odmerjanja regorafeniba pri starejših

Petrioli in sod:

- ❖ bolniki  $75 >$  let (n= 23)
- ❖ Shema: **2 tedna na terapiji, 1t premora**
- ❖ Zmanjšana izpostavljenost regorafenibu in metabolitom
- ❖ Začetna doza: fit bolniki 160 mg, 120 mg krhki bolniki z eno spremljajočo bolezniijo in 80 mg bolniki z 2 spremljajočima boleznima in PS 2

## Učinkovitost in varnost

- ❖ DCR po 2 mesecih 52.2 % (31.6-72.6)
- ❖ PFS 4.8 meseca (3.8-6.3)
- ❖ OS 8.9 meseca (6.9-10.6)
- ❖ NU: večinoma gr ≤2, med gr. 3 najpogostejsa SRN (9%) in utrujenost (9%)

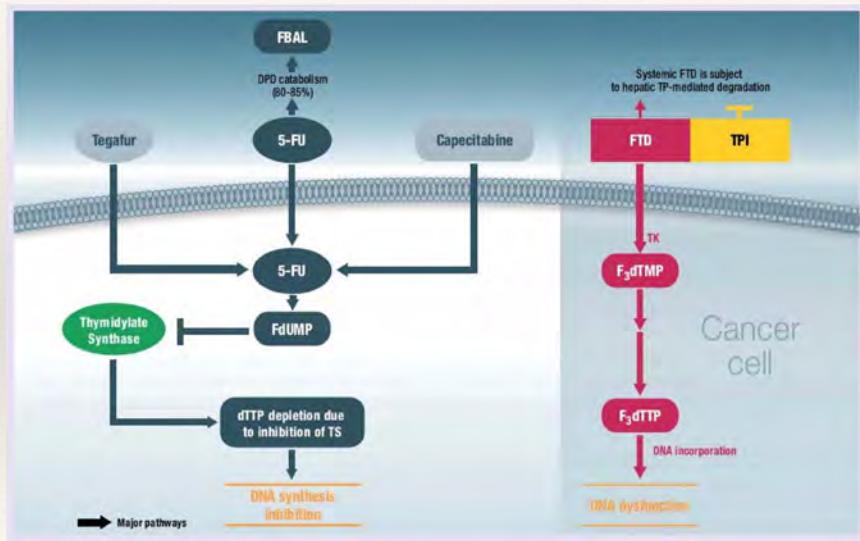

Petrioli et al. Clinical Colorectal Cancer, Vol. 17, No. 4, 307-12, 2018

## Metaanaliza NU zdravljenja CRC, GIST z regorafenibom

- ❖ NU pogostejši pri starejših > 65 let
- ❖ >> pri odmerku 160 mg ( $p = 0,001$ ), ni pa značilne korelacije pri 120 in 80 mg

Xie G. et al. Adv Ther (2019) 36: 1986-98

# Trifluridin/tipiracil ≠ 5-FU

## Trifluridin tipiracil

- ❖ Prednost: presnova ne gre prek DPD
- ❖ Manj kardiotoksičnosti (0,5%; vs 1,2-18% 5-FU)<sup>1</sup>
- ❖ Kriteriji za odmerjanje in prilagajanje<sup>2</sup>
- ❖ NUZ: ugodejši profil - razen hematološki NU (nevtropenija  $\geq$  gr. 3 - 38 %, febrilna nevtropenija 4%), driska (32%, gr.  $\geq$  3: 3%), navzea (48%; gr.  $\geq$  3: 2%), slabši apetit (39%; gr.  $\geq$  3: 4%), utrujenost (35% gr.  $\geq$  3: 4%)<sup>3</sup> ...

2. Lonsurf SPC

3. Lee JJ, Chu E. Clin Colorectal Cancer. 2017 Jun; 16(2): 85–92

## Konsenz ekpertov

- ❖ Kontrola hemograma 1. in 15. dan
- ❖ Kontrola med 1 in 2 ciklom na 1 ali 2 tedna, nato na 4 tedne
- ❖ Po nevtropeniji - rastni faktorji za granulocite

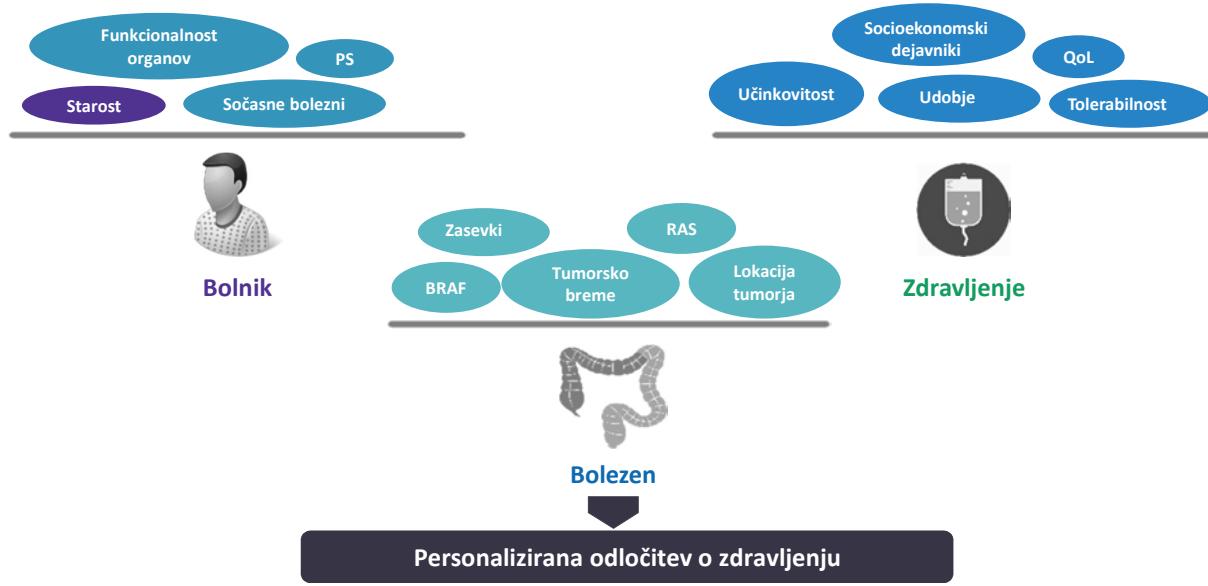

Bekaii-Saab T et al. Clin Colorectal Cancer, Volume 18, Issue 1, e117 - e129

## HER 2+ status (1)

- trastuzumab+lapatinib

Patients given trastuzumab and lapatinib (n=27)	
Age (years)	62 (50–68)
Sex	
Men	23 (85%)
Women	4 (15%)
ECOG performance status 0–1	27 (100%)
HER2 expression by immunohistochemistry score	
3+	20 (74%)
2+	7 (26%)
Site of primary tumour	
Rectum	7 (26%)
Colon	20 (74%)
Primary*	1 (0%)
Total†	16 (60%)
Metastatic disease in multiple sites	26 (96%)
Number of previous lines of therapy	5 (4–6)
Patients with ≥4 previous lines of therapy	20 (74%)
Previous anti-angiogenesis treatment	20 (74%)
Previous therapy with panitumumab or cetuximab	27 (100%)
Patients eligible to be assessed for sensitivity to panitumumab or cetuximab‡	15 (56%)
Previous exposure to panitumumab or cetuximab	0
Time on previous treatment (total; months)§	20 (16–24)
By primary site	
Proximal	15 (13–19)
Distal	19 (15–24)
Rectum	23 (20–25)

Data are n (%) or median (IQR). ECOG=Eastern Cooperative Oncology Group.  
\*Located in cecum, ascending colon, liver flexure, and transverse colon. †Located in splenic flexure, descending colon, and sigmoid colon. ‡Definition of eligibility reported in the appendix (p 16). Information available for 135 of 136 total previous regimens (treatment holiday excluded).

Table 1: Baseline characteristics

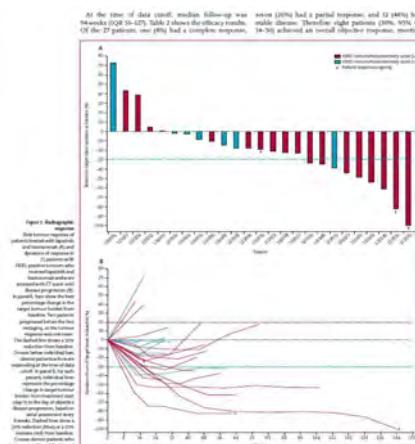

Figure 1: Radiologic response and time to response. Data are best response according to RECIST 1.1. RECIST=Response Criteria Evaluation in Solid Tumors.

Patients given trastuzumab and lapatinib (n=27)	
Complete response	1 (4%; 3 to 11)
Partial response	7 (26%; 9 to 43)
Stable disease ≥ 16 weeks*	8 (30%; 13 to 47)
Stable disease < 16 weeks	4 (15%; 1 to 27)
Objective response	8 (30%; 14 to 50)
Disease control†	16 (59%; 39 to 78)
Duration of response (weeks)	38 (24 to 94+)
Time to response (weeks)	8 (3 to 16)

Data are n (%), 95% CI or median (range). Response data are best response according to RECIST 1.1. RECIST=Response Criteria Evaluation in Solid Tumors.

\*Including one unconfirmed partial response according to RECIST 1.1. †Defined as complete plus partial responses plus stable disease >16 weeks.

Table 2: Responses to treatment

Sartore-Bianchi A, et al. Dual-targeted therapy with trastuzumab and lapatinib in treatment-refractory, KRAS codon 12/13 wild-type, HER2-positive metastatic colorectal cancer (HERACLES): a proof-of-concept, multicentre, open-label, phase 2 trial. Lancet Oncol 2016; 17: 738–46

## HER 2+ status (2)

- trastuzumab+pertuzumab

Table 2. Tumor Types and Molecular Alterations					
Primary Site	HER2	BRAF	Hedgehog Pathway	EGFR	Total
Lung, non-small-cell	30	21	3	0	54
Colorectal	40	2	0	0	42
Biliary	11	3	0	1	15
Ovary	8	4	2	0	14
Bladder	13	0	0	0	13
Pancreas	9	4	0	0	13
Uterus	7	0	0	0	7
Breast	21	0	2	2	6
Salivary gland	5	0	1	0	6
Small intestine	4	0	1	1	6
Prostate	1	3	1	0	5
Unknown primary	1	3	1	0	5
Other (21 tumor types)	20	9	10	5	44
Total	151 (66%)	49 (21%)	21 (9%)	9 (4%)	230

NOTE. N = 230.

Abbreviations: BRAF, murine sarcoma viral (v-raf) oncogene homolog B1; EGFR, epidermal growth factor receptor; HER2, human epidermal growth factor receptor-2.

\*One patient had a tumor with an RBMS-NRG1 fusion.

†Both had HER2 mutations without amplification or overexpression.

Table 3. Efficacy of Treatment With Trastuzumab Plus Pertuzumab in Patients With HER2 Amplification/OVERexpression

Primary Site	No. of Patients	Response, No. (%)			ORR, % (95% CI)
		CR	PR	SD > 120 Days	
Colorectal	37	0	14 (38)	4 (11)	38 (23 to 55)
Lung, non-small-cell	10	0	2 (20)	2 (20)	13 (2 to 36)
Bladder	9	1 (11)	2 (22)	2 (22)	33 (8 to 70)
Pancreas	9	0	2 (22)	1 (11)	22 (3 to 60)
Biliary	7	0	2 (29)	3 (38)	29 (4 to 71)
Ovary	8	0	1 (13)	0	13 (0 to 53)
Uterus	7	0	0	0	0
Salivary gland	5	0	4 (80)	0	80 (28 to > 99)
Other (11 sites)*	16	1 (6)	1 (6)	3 (19)	13 (2 to 38)
Total	114	2 (2)	28 (25)	16 (14)	26 (19 to 35)

NOTE. N = 114. Includes 12 patients with amplification/overexpression plus mutation.

Abbreviations: CR, complete response; ORR, objective response rate; PR, partial response; SD, stable disease.

\*Responses occurred in patients with adenocarcinomas of the prostate (one) and skin (apocrine; one).

# TRK genske fuzije -larotretinib- ORR+ PFS

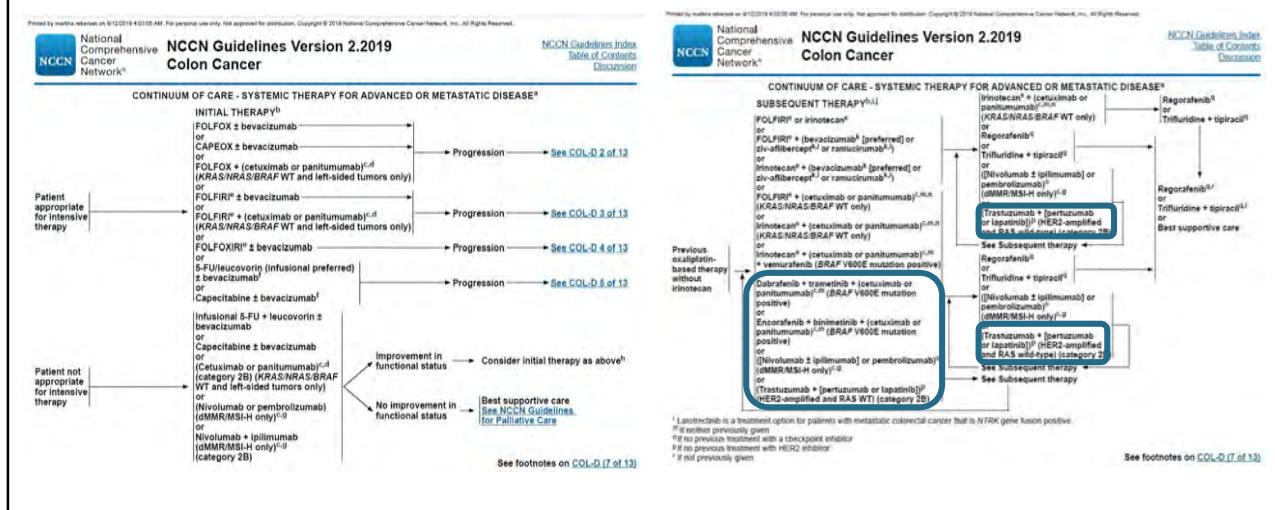

**Figure 1. Efficacy**  
Panel A is a scatterplot of the maximum change in tumor size, according to tumor type. One patient (appendix) had a trypsinogen receptor kinase (TRK) solvent front resistance mutation (TRK1 G240P) at baseline owing to previous therapy. One patient (bladder) had a pathologic complete response. Data for 1 patient are not shown; the patient had a primary tumor in the rectum and had undergone a total proctectomy and abdominoperitoneal resection for an intestinal stromal tumor, and 1's uterine fibromyoma. Panel B shows a survival plot of outcome in all 55 patients. One patient (bladder again) had a second imaging scan after the confirmed response was established, and progression-free survival was censored at 17 months.

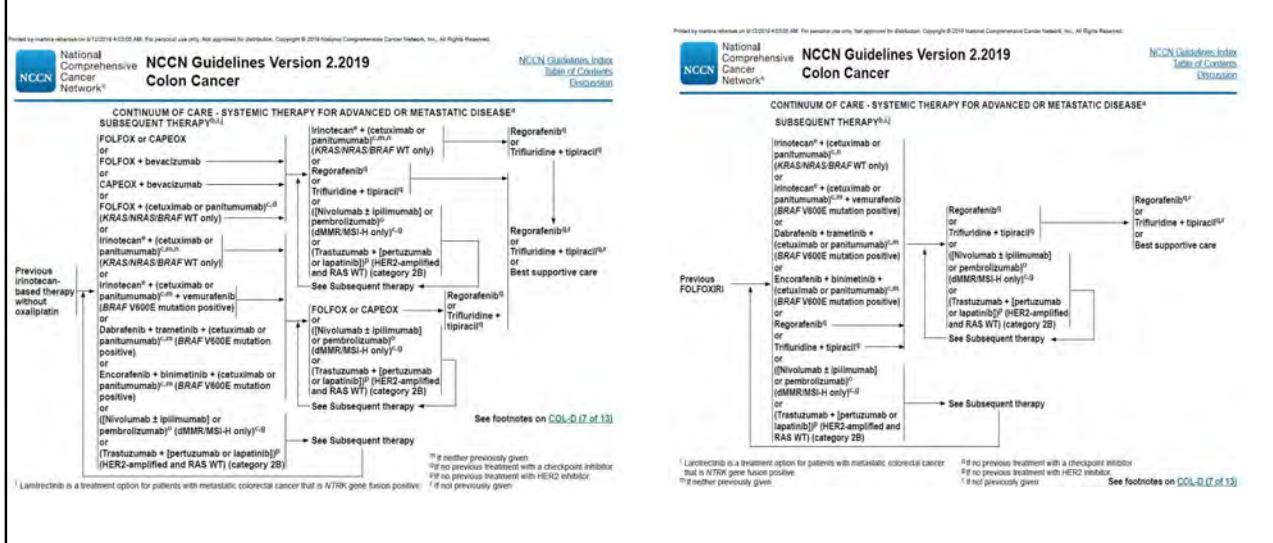

Drilon A, et al Efficacy of Larotrectinib in TRK Fusion- Positive Cancers in Adults and Children. N Engl J Med 2018;378:731-9.

Description**

**SYSTEMIC THERAPY FOR ADVANCED OR METASTATIC DISEASE - CHEMOTHERAPY REGIMENS**

Cetacitinib<sup>8</sup>  
Cetacitinib 850–1250 mg/m<sup>2</sup> PO twice daily; days 1–14  
Repeat every 3 weeks

Cetacitinib + bevacizumab<sup>25</sup>  
Bevacizumab 7.5 mg/kg IV, day 1  
Repeat every 3 weeks

Irinotecan  
Irinotecan 125 mg/m<sup>2</sup> IV over 30–90 minutes, days 1 and 8  
or Irinotecan 180 mg/m<sup>2</sup> IV over 30–90 minutes, day 1  
Repeat every 3 weeks  
or Irinotecan 300–350 mg/m<sup>2</sup> IV over 30–90 minutes, day 1  
Repeat every 3 weeks

Irinotecan + cetuximab (KRAS/NRAS/BRAF WT only)  
Cetuximab 400 mg/m<sup>2</sup> first infusion, then 250 mg/m<sup>2</sup> IV weekly<sup>25</sup>  
or Cetuximab 600 mg/m<sup>2</sup> IV over 2 hours, day 1, every 2 weeks<sup>13</sup>

Irinotecan + panitumumab<sup>14</sup> (KRAS/NRAS/BRAF WT only)  
Panitumumab 6 mg/kg IV over 60 minutes every 2 weeks

Irinotecan + ramucirumab<sup>16</sup>  
Ramucirumab 8 mg/kg IV over 60 minutes every 2 weeks

Cetuximab (KRAS/NRAS/BRAF WT only)  
Cetuximab 400 mg/m<sup>2</sup> first infusion, then 250 mg/m<sup>2</sup> IV weekly<sup>25</sup>  
or Cetuximab 500 mg/m<sup>2</sup> IV over 2 hours, day 1, every 2 weeks<sup>13</sup>

Panitumumab<sup>20</sup> (KRAS/NRAS/BRAF WT only)  
Panitumumab 6 mg/kg IV over 60 minutes every 2 weeks

Pembrolizumab<sup>30</sup> (dMMR/MSI-H only)  
Pembrolizumab 2 mg/kg every 3 weeks.  
or Pembrolizumab 200 mg every 3 weeks

Nivolumab<sup>31</sup> (dMMR/MSI-H only)  
Nivolumab 3 mg/kg every 2 weeks  
or Nivolumab 240 mg IV every 2 weeks  
or Nivolumab 480 mg IV every 4 weeks

Nivolumab + ipilimumab<sup>32</sup> (dMMR/MSI-H only)  
Nivolumab 3 mg/kg (30-minute IV infusion) and ipilimumab 1 mg/kg (30-minute IV infusion) once every 3 weeks for four doses, then  
Nivolumab 3 mg/kg or nivolumab 240 mg IV every 2 weeks

Description**

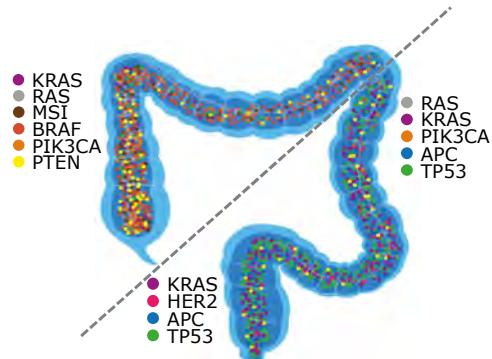

## LOKACIJA TUMORJA<sup>1-4</sup>

### Tumor location – a master prognostic factor

#### Right-sided (proximal) colon cancer<sup>1</sup>

- More common in women
- Microsatellite instability
- Derived from mid-gut

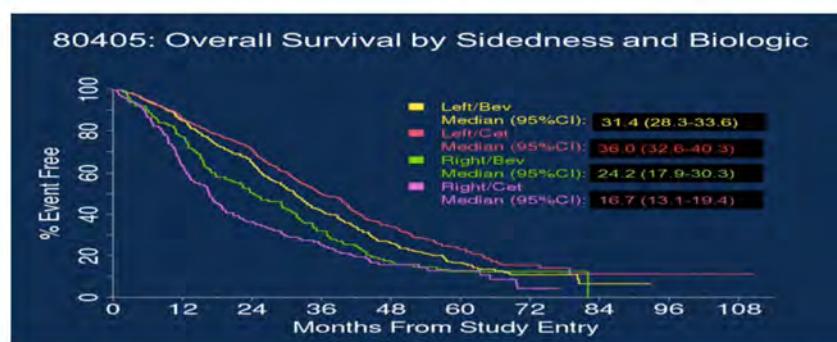

#### Left-sided (distal) colon cancer<sup>1</sup>

- More common in men
- Chromosomal instability
- Derived from hind-gut

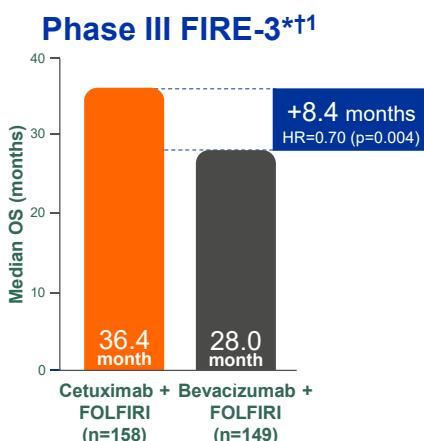

Figure from Salem ME, et al. Oncotarget 2017;8:86356–86368.<sup>5</sup> mCRC, metastatic colorectal cancer.  
1. Kim SE, et al. World J Gastroenterol 2015;21:5167–5175; 2. Venook A, et al. ESMO 2016 (Oral Presentation); 3. Dan Aderka. ESMO 2017 (Merck Satellite Symposium); 4. Venook A, et al. JAMA 2017;317:2392–2401; 5. Salem ME, et al. Oncotarget 2017;8:86356–86368.

### Why right versus left?

Venook A et al, ASCO 2016

TWO LARGE PHASE III 1<sup>ST</sup>-LINE TRIALS DEMONSTRATE UNPRECEDENTED OS BENEFIT OF CETUXIMAB + CT VS BEVACIZUMAB + CT IN LEFT-SIDED RAS WT MCRC\*†‡§||–4

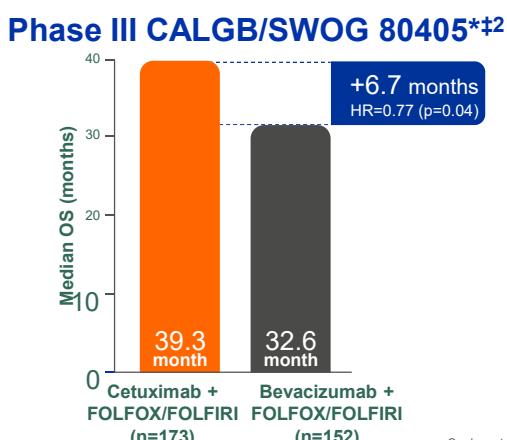

Graph created using data from Stintzing S, et al. ASCO 2018 (Abstract No. 3508).

\*Retrospective analysis of patients with left-sided RAS wt mCRC. FIRE-3 did not meet its primary endpoint of significantly improving overall response rate (ORR) based on investigators' read in patients with KRAS (exon 2) wt mCRC. †The CALGB/SWOG 80405 study did not meet its primary endpoint of significantly improving overall survival in the cetuximab + CT arm vs bevacizumab + CT arm in patients with KRAS (exon 2) wt mCRC.<sup>4</sup>  
CT, chemotherapy; HR, hazard ratio; OS, overall survival.

Aderka D, et al. Explaining the unexplainable: discrepancies in results from the CALGB/SWOG 80405 and FIRE-3 studies. *Lancet Oncol* 2019; 20: e274–83.

CALGB/SWOG 80405		FIRE-3		Most effective first-line combinations		Least effective first-line combinations	
Oxaliplatin (75% of patients)		Irinotecan (100% of patients)					
Median (95% CI) overall survival (months)		Median (95% CI) overall survival (months)					
Cetuximab	Bevacizumab	Cetuximab	Bevacizumab				
CMS1	11.7 (10.9–18.0)	22.5 (15.9–32.6)	17.9 (7.1–28.7)	13.1 (8.5–17.6)	Oxaliplatin-bevacizumab	Oxaliplatin-cetuximab	
CMS2	42.0 (39.3–54.4)	36.0 (33.5–43.3)	38.3 (33.9–42.8)	29.1 (25.0–33.3)	Irinotecan/oxaliplatin-cetuximab	Irinotecan-bevacizumab	
CMS3	26.8 (20.9–36.0)	15.1 (10.8–30.1)	16.6 (0.0–42.3)	18.6 (13.0–24.3)	Oxaliplatin-cetuximab	Oxaliplatin-bevacizumab	
CMS4	30.8 (24.4–43.5)	32.7 (26.3–37.5)	40.1 (20.3–59.9)	21.1 (14.8–27.3)	Irinotecan-cetuximab	Irinotecan-bevacizumab	

**Figure 4:** Overall survival by first-line biological therapy and chemotherapy combinations and CMS classification  
Most effective combinations for each CMS subtype are highlighted in red. Least effective combinations for each CMS subtype are highlighted in blue. 80% of the left-sided tumours (CMS2 and CMS4) could benefit from irinotecan with cetuximab. Cetuximab is part of the most effective combination for 86% of tumours (CMS2, CMS3, and CMS4). Data are reproduced from the FIRE-3 study<sup>2</sup> and the CALGB study.<sup>3</sup> CMS=Consensus Molecular Subtypes.

1

The CMS classification seems to be predictive of the most effective **1<sup>st</sup>-line** chemotherapy + biological combination that achieves the longest survival for each CMS tumor subtype<sup>1</sup>

2

Each CMS tumor has a **different** 'best 1<sup>st</sup>-line combination' further demonstrating that the era of 'one treatment fits all' – is over!

3

Choosing the best 1<sup>st</sup>-line combination for a CMS tumor subtype can **double the survival** of the patient or **increase the median survival by almost a year**<sup>1</sup>

4

It seems that the CMS classification is a unique and most comprehensive '**personalized approach**' which may guide the CRC treatment<sup>1</sup>

5

The dramatic life prolongation is obtained not by a 'new drug' but by simple **optimization** of the combinations of established drugs to obtain benefit according to the CMS prediction<sup>1</sup>

6

**FINAL CONCLUSION:** cetuximab is part of the 1<sup>st</sup>-line 'best' combination in 86% of the CRC tumors while bevacizumab is in 14%<sup>1</sup>

Most effective  
1<sup>st</sup>-line combination<sup>1</sup>

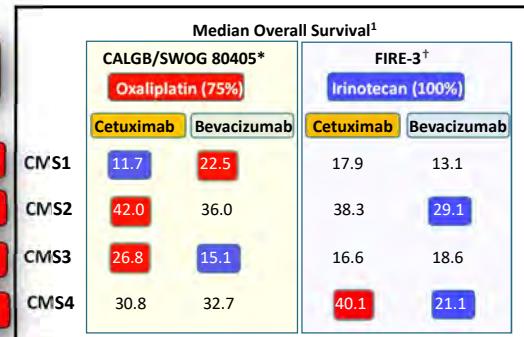

FOLFOX + Bevacizumab

FOLFIRI/FOLFOX + Cetuximab

FOLFOX + Cetuximab

FOLFIRI + Cetuximab

86%

1. Aderka D, et al. Lancet Oncol 2019;20:e274–283; 2. Venook AP, et al. JAMA 2017;317:2392–2401;  
3. Heinemann V, et al. Lancet Oncol 2014;15:1065–1075.

## Zaključki (1)....2019

- wtRAS → anti-EGFR
- mtBRAF → BRAF+ MEK+ anti- EGFR, BRAF + KT(irinotekan) + anti- EGFR
- MSI- H → anti- PD-1 mono, anti- PD- 1 + anti- CTLA-4
- HER- 2 → anti- HER 2 kombinacija
- TRK genske fuzija → NTRK inhibitorji

## Zaključki (2)....2019.....

- Lokacija primarnega tumorja- sistemska terapija:
  - wtRAS/wtBRAF levi kolon: KT+anti-EGFR
  - wtRAS/wtBRAF desni kolon: ?
- CMS podtipi  sistemska terapija?

“CMS klasifikacija trenutno predstavlja najboljši opis tumorske heterogenosti raka debelega črevesa in danke na ravni izražanja genov in predstavlja napredok v personalizirani medicini.”

## ADJUVANTNO SISTEMSKO ZDRAVLJENJE RAKA DEBELEGA ČREVESA IN DANKE

9. Šola tumorjev prebavil  
22. 11. 2019, Ljubljana, Slovenija

Marija Ignjatović, dr. med

### AGENDA

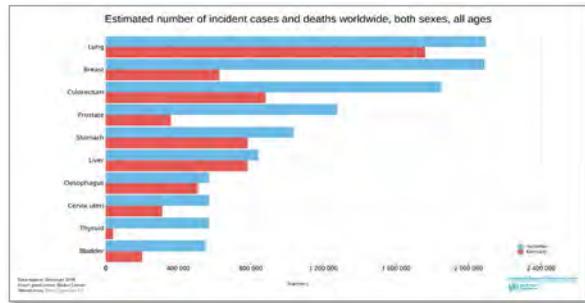

#### ✓ Splošne informacije

- Stadij II
- Stadij III
- Pravi čas za adjuvantno kemoterapijo (adj. KT)
- Kaj ne smemo narediti?

# RAK DEBELGA ČREVEŠA IN DANKE (RDČD)

- **Incidenca:** **3.** najpogostejši malignom
- **Mortaliteta:** **2.** najpogostejši malignom zaradi katerega umrejo bolniki
  - upada v bolj razvitedih državah! (presejalni program, boljše zdravljenje raka debelega črevesa in danke)
- **Presejalni program**

Bray F, Ferlay J, Soerjomataram I et al. CA Cancer J Clin. 2018 Nov;68(6):394-424; Arnold M, Sierra MS, Laversanne M, et al. Gut. 2017;66:683-691

NIZZ

**2016** Z letom 2016 se zaključuje že četrti presejalni krog Programa Svit

V dvoletnem presejalnem krogu je v program vabiljenih okrog 600,000 prebivalcev Slovenije.

50 → 74 let z urejenim zdravstvenim zavarovanjem

Odkritih je bilo več kot 2.000 rakov.  
70% od teh v zgodnji fazi

Pri več kot 17.000 osebah smo odstranili predrakave spremembe in tako preprečili nastanek raka.

349 manj novih primerov raka na debelem črevesu in danki od leta 2010 do 2013. Trend upadanja števila novih primerov se kaže še naprej.

[www.program-svit.si](http://www.program-svit.si)

# BOLNIKI Z ZGODNJIM RDČ

## SKUPINA 1

- Ni mikrometastatske bolezni v času operativnega zdravljenja
- **RDČ se ne bo ponovil, ne glede na zdravljenje z adj. KT**

## SKUPINA 2

- Mikrometastatska bolezen je prisotna v času operativnega zdravljenja
- **Adj. KT bo uničila mikrometastaze**

## SKUPINA 3

- Mikrometastatska bolezen je prisotna v času operativnega zdravljenja
- **Adj. KT ne bo uničila mikrometastaz**

STADIJ I

STADIJ III

STADIJ II

ADJ. KT SAMO ZA  
IZBRANE BOLNIKE

VISOKO RIZIČNI, pMMR

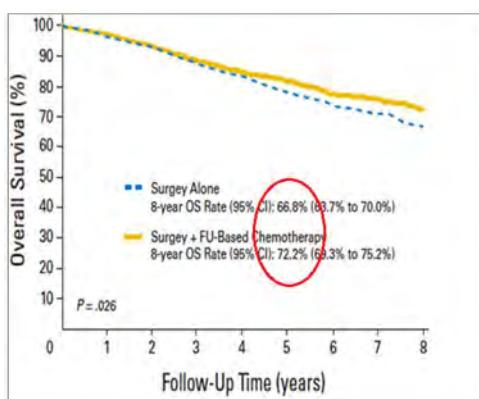

ADJ. KT

“the role of adjuvant therapy in stage II CRC remains an area of great controversy despite multiple clinical trials and meta-analyses. Questions remain not only about which patients will benefit from treatment but also **what chemotherapy to use** if adjuvant chemotherapy is recommended”.

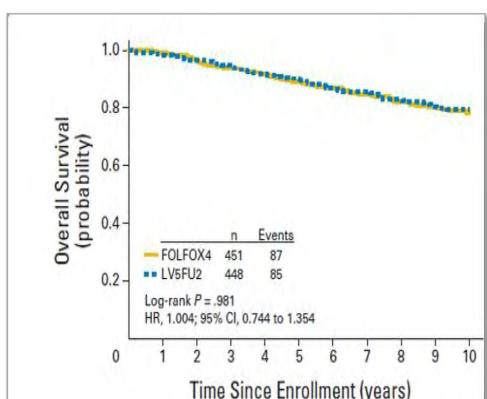

Oj

Varghese A. Clin Colon Rectal Surgery 2015;28:256-261

## *Lahko zdravljenje z ADJ. KT (FP + oksaliplatin) traja manj kot 6 mesecev???*

O

### ***IDEA: International Durations Evaluation of Adjuvant Cht. In stage III CRC***

**Figure 1. Disease-free Survival with 3 Months versus 6 Months of Adjuvant Therapy.**  
Panel A shows the distribution of disease-free survival in the overall modified intention-to-treat population. At a median follow-up of 41.8 months, noninferiority of 3 months of treatment versus 6 months was not confirmed (hazard ratio, 1.18; 95% confidence interval [CI], 1.06–1.28; P = .06). Panel B shows 3-year disease-free survival in the 3-month therapy group, as compared with 75.5% (95% CI, 74.4 to 76.7) in the 6-month therapy group. Panel C shows the 3-year rate of disease-free survival according to subgroup, including treatment, tumor and nodal status, and risk.

# AGENDA

- Splošne informacije
- Stadij II
- Stadij III – ni tako komplikiran
- Pravi čas za adjuvantno kemoterapijo (adj. KT)**
- Kaj ne smemo narediti?

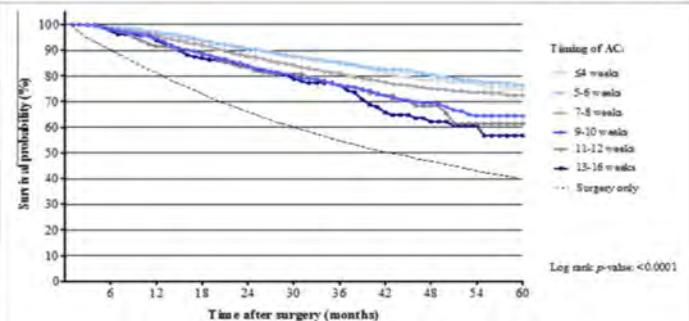

Oj

## KDAJ JE NAJBOLJŠE ZAČETI Z ADJ. KT?

Adjuvant chemotherapy should be started as early as possible starting from the fourth week up to a maximum of 8–12 weeks after surgery [IV, B] (refer to colon cancer chapter 7.3.2.5). Adjuvant treatment should not be started in the presence of inadequate postoperative recovery or pelvic septic complications.

ing of chemotherapy after surgery. In this report, our systematic review and meta-analysis indicates that relative OS decreases by 14% for every 4-week delay to initiation of AC. Our results are also consistent across DFS and cancer-specific survival analyses.

Biagi JJ et al. JAMA 2011; Acrk et al, Eur J Cancer 2015

## KDAJ JE NAJBOLJŠE ZAČETI Z ADJ. KT?

- **4 do 8 tednov po operativnem zdravljenju!**
- Daljši čas do začetka adj. KT, slabše preživetje

- **Bolnik: pooperativni zapleti, pridružene bolezni**
- Problem zdravstvenega sistema: čakalne dobe,...

## AGENDA

- Splošne informacije
- Stadij II
- Stadij III – ni tako komplikiran
- Pravi čas za adjuvantno kemoterapijo (adj. KT)
- Kaj ne smemo narediti?**

O

# NE ZDRAVITE VAŠE BOLNIKE

- *Z adj. KT, ki je na osnovi irinotekana*
- *Adj. KT + zaviralec angiogeneze/EGFR inhibitor*

Oj

## ADJ. KT pri RDČD

- Začeti 4 do 8 tednov po operaciji
- **Stadij II**
  - ADJ. KT NI standard zdravljenja za vse bolnike
  - Visoko rizični, pMMR: kapecitabin ali 5FU, 6 mesecev
  - Visoko rizični, dMMR: samo za izbrane bolnike, XELOX 3 mesece ali FOLFOX 6 mesecev
- **Stadij III**
  - Je standard zdravljenja za vse bolnike
  - Nizko rizični, XELOX 3 mesece
  - Visoko rizični, XELOX ali FOLFOX 6 mesecev
  - Kapecitabin 6 mesecev (če niso primerni za zdravljenje v kombinaciji z oksaliplatinom)

# Totalno neoadjuvantno zdravljenje raka danke

Vaneja Velenik

## Standardna KRT

- Standardna KRT

- 45-54 Gy
- 5-FU/kapecitabin
- Interval do operacije

Izid zdravljenja zelo različen

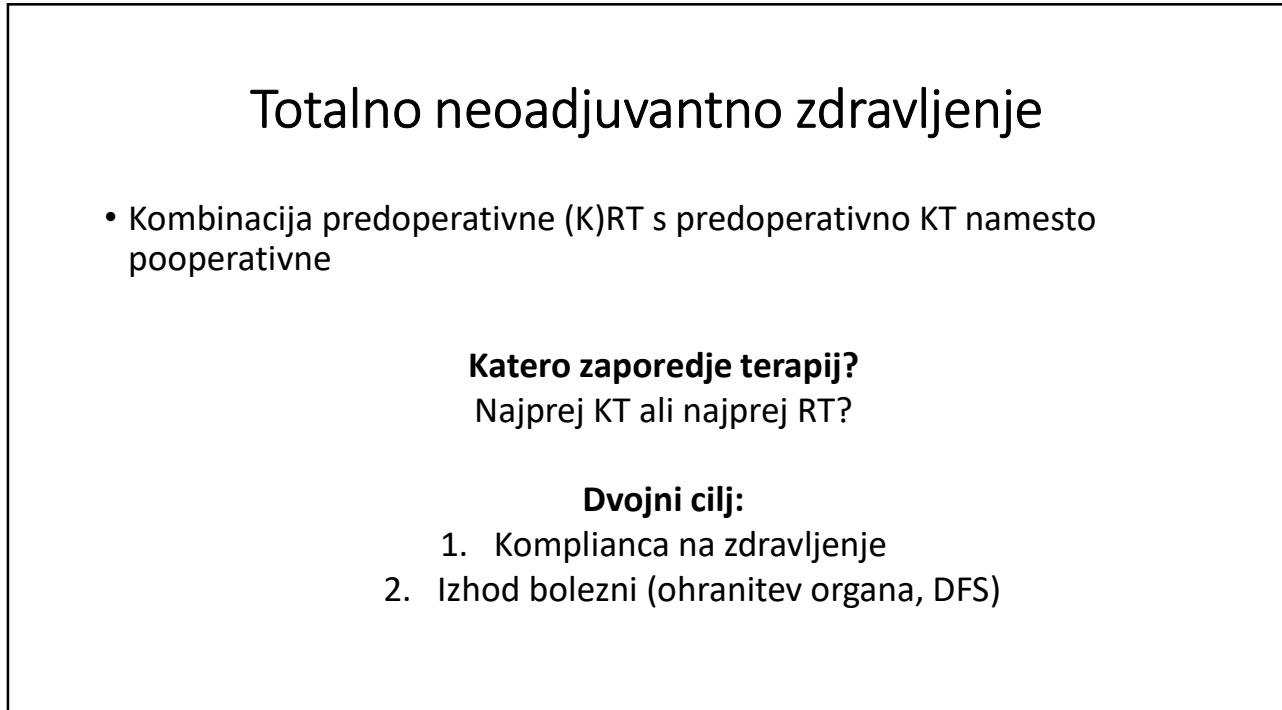

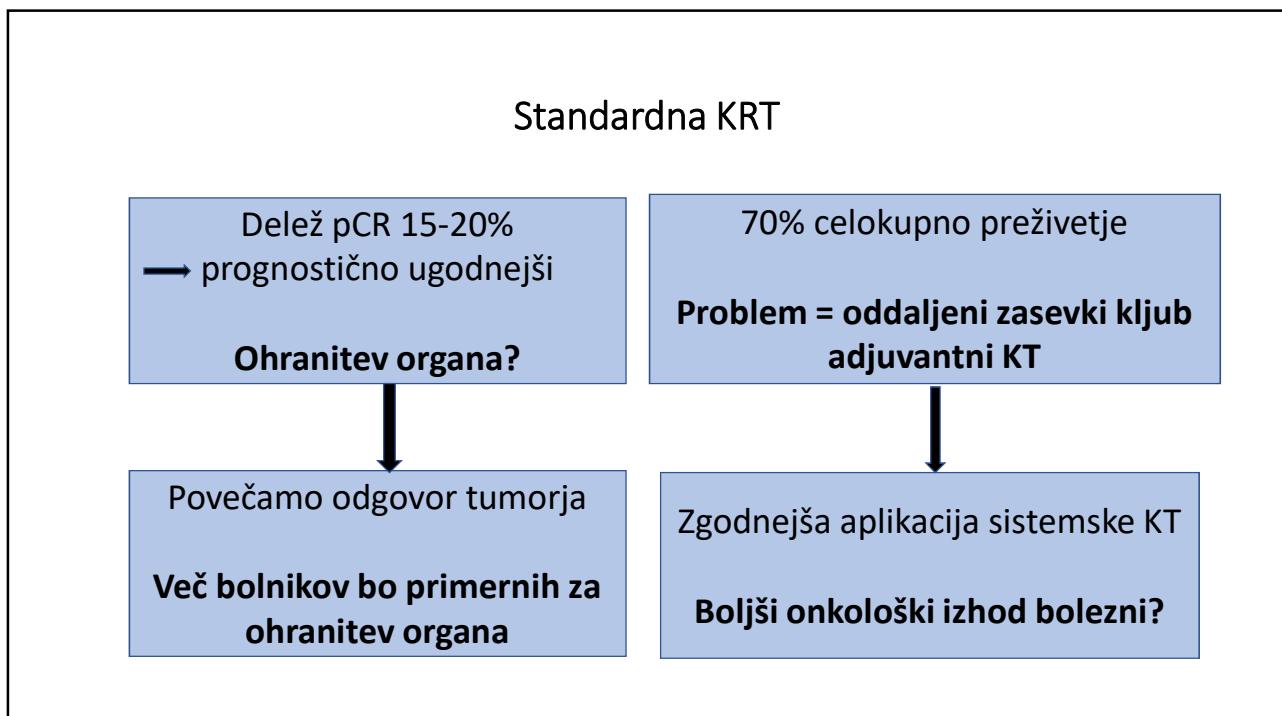

Delež pCR 15-20%

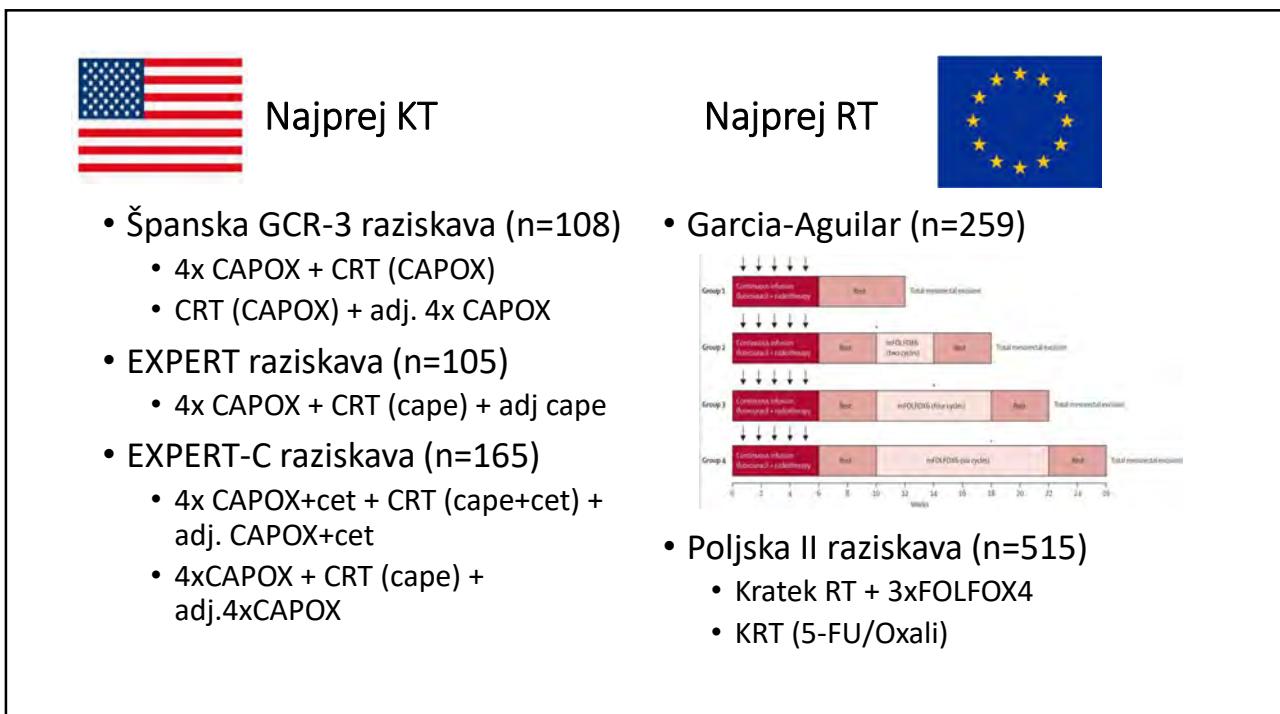

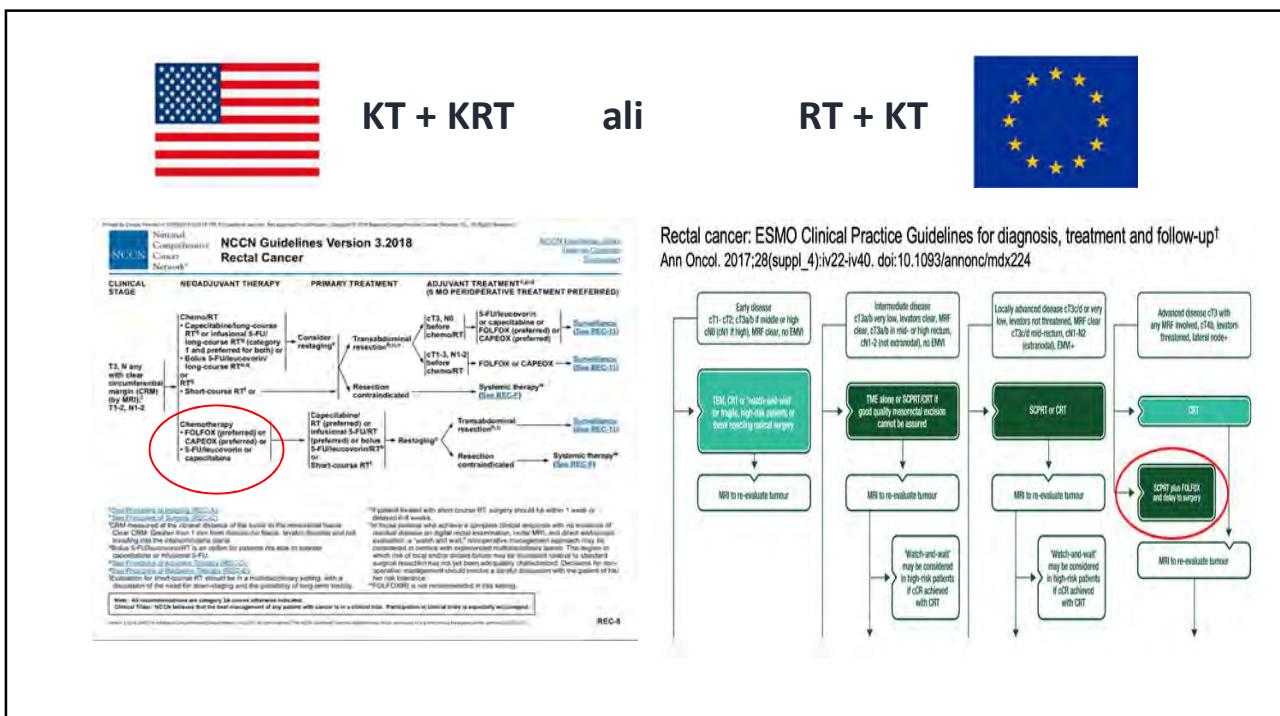

→ prognostično ugodnejši

Ohranitev organa

70% celokupno preživetje

**Problem = oddaljeni zasevki kljub  
adjuvantni KT**

## Najprej KT

### ZA

- Zgodnje zdravljenje mikrometastaz
- Večja komplianca na zdravljenje s KT
  - <sup>1</sup>Španska GCR-3: 94%
  - <sup>2</sup>EXPERT: 87%
  - <sup>3</sup>EXPERT-C: 94%

### PROTI

- Možnost slabše compliance na kasnejšo KRT
- Možna indukcija pospešene repopulacije in zato slabša učinkovitost KRT<sup>4</sup>

<sup>1</sup>Fernandez-Martos et al. Ann Oncol 2015

<sup>2</sup>Chua et al. Lancet Oncol 2010

<sup>3</sup>Dewdney et al. JCO 2012

### Randomized Phase II Trial of Chemoradiotherapy Plus Induction or Consolidation Chemotherapy as Total Neoadjuvant Therapy for Locally Advanced Rectal Cancer: CAO/ARO/AIO-12

Emmanouil Fokas, MD, DPhil<sup>1,2,3,4</sup>; Michael Allgäuer, MD<sup>5</sup>; Bülent Polat, MD<sup>6</sup>; Gunther Klautke, MD<sup>7</sup>; Gerhard G. Grabenbauer, MD<sup>8</sup>; Rainer Fietkau, MD<sup>9</sup>; Thomas Kuhnt, MD<sup>10</sup>; Ludger Staib, MD<sup>11</sup>; Thomas Brunner, MD<sup>12,13</sup>; Anca-Ligia Grossu, MD<sup>12</sup>; Wolff Schmiegel, PhD, MD<sup>14</sup>; Lutz Jacobasch, MD<sup>15</sup>; Jürgen Weitz, MD<sup>2,16,17</sup>; Gunnar Folprecht, MD<sup>2,18,19</sup>; Anke Schlienska-Lange, MD<sup>2</sup>; Michael Lentje, MD<sup>20</sup>; Christoph-Thomas Germer, PhD<sup>21</sup>; Robert Gürtzmann, MD<sup>22</sup>; Matthias Schwarzbach, MD<sup>23</sup>; Vittorio Paolucci, MD<sup>19</sup>; Wolf O. Bechstein, MD<sup>1</sup>; Tim Friede, PhD<sup>20</sup>; Michael Ghadimi, MD<sup>20</sup>; Ralf-Dieter Hoffmeinz, MD<sup>21</sup>; and Claus Rödel, MD<sup>1,2,3,4</sup>  
on behalf of the German Rectal Cancer Study Group

Fokas et al. JCO 2019 (ahead of print)

Najprej KT (N=156)	Najprej RT (N=150)
S KRT povezana G3 in 4 toksičnost 37%	S KRT povezana G3 in 4 toksičnost 27%
• Komplianca	• Komplianca
Polna doza RT: 91%	Polna doza RT: 97%
Konkomitantni 5-FU: 78%	Konkomitantni 5-FU: 87%
Konkomitantni oxali: 76%	Konkomitantni oxali: 93%
Indukcijska KT: 92%	Konsolidacijska KT: 85%
• Delež pCR 17% ( $p = 0.210$ )	• Delež pCR 25% ( $p < 0.001$ )

## Glavne ugotovitve:

- **Nižja toksičnost in višja komplianca, če je najprej RT**
  - Sočasen 5-FU/oxali lahko prispeva k večji toksičnosti KRT in nižji komplianci (posebno po indukcijski KT)
- **Večja komplianca na indukcijsko KT, če je najprej KT v primerjavi s konsolidacijsko KT, če je najprej RT**
- **Višji delež pCR, če je najprej RT**
  - Vendar: interval, če je najprej RT = 90 dni vs 45 dni, če je najprej KT
  - Pretvorba višjega pCR v boljši onkološki izid?
    - Ni še podatkov
    - Slabša komplianca na konsolidacijo lahko vpliva na DFS

Imamo zmagovalca!

.....?????

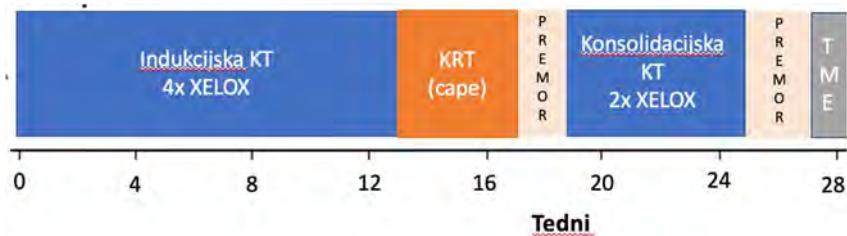

- Različni TNT pristopi za različne cilje zdravljenja ali skupine bolnikov?
  - Najprej RT, če želimo zmanjšanje tumorja
  - Najprej KT, če obstaja visoko tveganje za mikrometastatsko bolezen
- Potrebujemo dolgoročne rezultate!

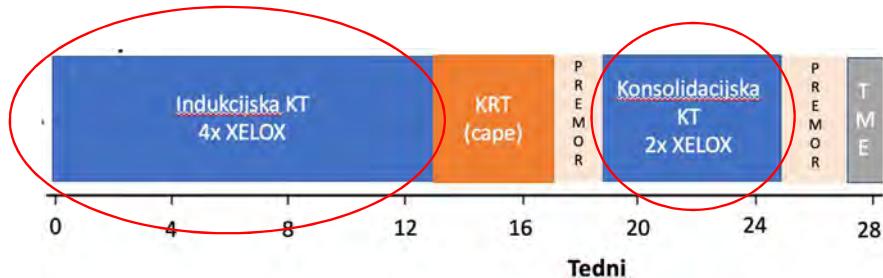

- 10 raziskav z indukcijsko KT, 612 bolnikov
- Vsaj 50% raziskav je vključevalo KRT z oxaliplatinom
- pCR 21.8% (10-40%), R0 94.9%
- lokalna ponovitev: 3.5%  
sistemska ponovitev: 20.6%
- 5L OS 74.4%
- 5L DFS 65.4%

- 28 raziskav z indukcijsko ali konsolid. KT, 3579 bolnikov
- pCR 22.4.8% (10-40%), R0 95%
- lokalna ponovitev: 6%  
sistemska ponovitev: 21.5%
- 5L OS 74 %
- 5L DFS 65%

- Srednji čas do zapore stome 18 tednov (7-61 tednov)

Pred zdravljenjem

Dejavniki visokega tveganja za ponovitev bolezni	cT4	30	36,6%
	cN2	52	63,4%
	EMVI+	52	63,4%
	ekstramezor. Ig	6	7,3%
	MRF+	48	58,5%

## Kompletni odgovor

- cCR 6%
  - pCR 22.7%
- = 28.7%

Tehnika RT	N (%)	pCR	P
3D konformno	34 (45.3)	4 (11.8)	
IMRT /VMAT SIB	41 (54.6)	13 (31.7)	P= 0.04

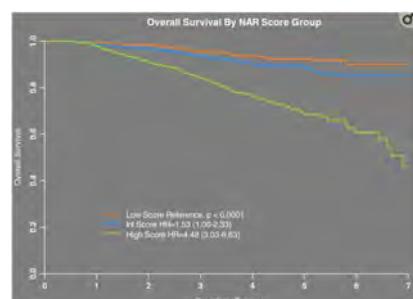

- skoraj pCR 8.5%

58.5% MRF+ → 5.3% R1

## Kaj to pomeni za preživetje?

- Neoadjuvant rectal (NAR) score
  - Na osnovi pN in downstaging T (cT v pT)
  - Regres bolezni je boljši napovednik OS kot pCR

$$NAR = \frac{[5 pN - 3(cT - pT) + 12]^2}{9.61}$$

NAR	N (%)
<8	31 (37.8)
8-16	30 (36.6)
>16	14 (17.1)

Srednja vrednost: 8.4

George TJ et al. Curr Colorectal Cancer Report 2015

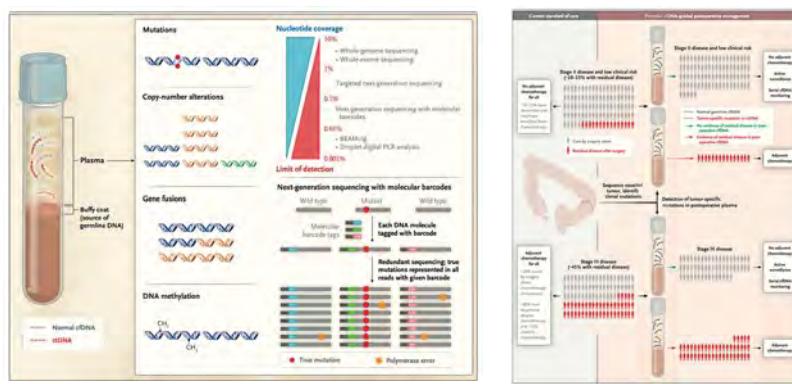

**Ali bi izhodiščno klinično prognostično ugodnejše skupine imele dobrobit od TNT?**

**Katero bi bilo pravo zaporedje modalitet?**

### Tekočinska biopsija

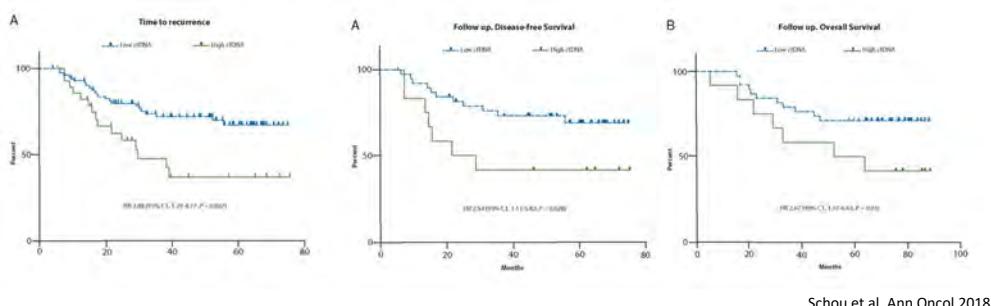

- cirkulirajoča tumorska DNA lahko usmerja sistemsko zdravljenje

Corcoran et al. NEJM 2018

## Kandidati za uvodno KT?

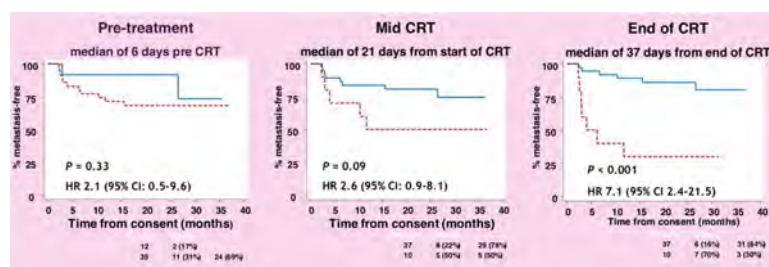

- Visok nivo ctDNA v plazmi pred pričetkom zdravljenja (nad 75-im percentilom) pomeni višje tveganje za lokalno ali sistemsko ponovitev, krajsi čas do ponovitve in slabše preživetje

Schou et al. Ann Oncol 2018

## Kandidati za konsolidacijsko KT?

- ctDNA med neoadjuvantno KRT lahko potencialno identificira bolnike, pri katerih bo verjetno prišlo do razsoja
- Pri precejšnjem deležu teh bolnikov pride do razsoja kmalu po zaključeni KRT

Khakoo et al. Predstavitev na EACR-ESMO Joint Conference on Liquid biopsies 2019

## PREHABILITACIJA

### ZAKLJUČKI

#### PREHABILITACIJA

- zmanjša postoperativne zaplete in smrtnost
- omogoča odlog in pripravo bolnikov na operacijo
- zmanjša potrebo po urgentnih operacijah
- najpomembnejša je prehranka priprava
- natančen protokol prehabilitacije ni izdelan

# Kemoterapija pri jetrnih zasevkih raka debelega črevesa in danke

Janja Ocvirk

Ljubljana, 22.11.19

## Role of neoadjuvant therapy in clearly R0 resectable CRLM

- However, the majority of retrospective studies failed to demonstrate any overall survival (OS) benefits from neoadjuvant therapy – five-year OS rates ranged from 38.9% to 74% in patients who had pre-operative chemotherapy before liver resection, compared with 20.7 to 56% in patients who underwent upfront surgery

Nigri G, Petrucciani N, Ferla F, La Torre M, Aurelio P, Ramacciato G. Neoadjuvant chemotherapy for resectable colorectal liver metastases: what is the evidence? Results of a systematic review of comparative studies. *Surgeon*. 2015;13:83–90. [

## EORTC intergroup trial 40983

- perioperative FOLFOX (folinic acid, fluorouracil, and oxaliplatin; 6 cycles before and 6 cycles after surgery) improved 3-year progression-free survival (PFS) modestly – 42.4% compared with 33.2% in surgery-only patients, an absolute 9.2% increase – at the cost of higher peri-operative morbidity (25% vs 16%). This did not translate into any overall survival benefit at a median follow-up of 8.5 years

Nordlinger B, Sorbye H, Glimelius B, Poston GJ, Schleg PM, Rouger P, Bechstein WO, Primrose JN, Walpole ET, Finch-Jones M, Jack D, Mirza D, Parks RW, Collette L, Prates M, Berthe U, Van Cutsem E, Scheithauer W, Gruenberger T. EORTC Gastro-Intestinal Tract Cancer Group; Cancer Research UK; Arbeitsgruppe Lebermetastasen und-Tumoren in der Chirurgischen Arbeitsgemeinschaft Onkologie (ALM-CAO); Australasian Gastro-Intestinal Trials Group (AGITG); Fédération Francophone de Cancérologie Digestive (FFCD) Perioperative chemotherapy with FOLFOX4 and surgery versus surgery alone for resectable liver metastases from colorectal cancer (EORTC Intergroup trial 40983): a randomised controlled trial. Lancet. 2008;371:1007–1016. [PMC free article] [PubMed] [Google Scholar]  
Nordlinger B, Sorbye H, Glimelius B, Poston GJ, Schleg PM, Rouger P, Bechstein WO, Primrose JN, Walpole ET, Finch-Jones M, Jack D, Mirza D, Parks RW, Mauer M, Tanis E, Van Cutsem E, Scheithauer W, Gruenberger T. EORTC Gastro-Intestinal Tract Cancer Group; Cancer Research UK; Arbeitsgruppe Lebermetastasen und-Tumoren in der Chirurgischen Arbeitsgemeinschaft Onkologie (ALM-CAO); Australasian Gastro-Intestinal Trials Group (AGITG); Fédération Francophone de Cancérologie Digestive (FFCD) Perioperative FOLFOX4 chemotherapy and surgery versus surgery alone for resectable liver metastases from colorectal cancer (EORTC 40983): long-term results of a randomised, controlled, phase 3 trial. Lancet Oncol. 2013;14:1208–1215. [PubMed] [Google Scholar]

- A meta-analysis including 18 studies concurred neoadjuvant treatment, in general, did not offer PFS or OS advantage; however, it could improve survival in patients considered high risk of recurrence (pooled hazard ratio for 5-year OS = 0.69)

Liu W, Zhou JG, Sun Y, Zhang L, Xing BC. The role of neoadjuvant chemotherapy for resectable colorectal liver metastases: a systematic review and meta-analysis. Oncotarget. 2016;7:37277–37287. [PMC free article] [PubMed] [Google Scholar]

## CONVERSION CHEMOTHERAPY

- A subset of patients with initially unresectable CRLM (around 15%-30% depending on the definition of unresectability) may be rendered resectable after conversion chemo-therapy. In a systematic review of 10 studies using different downsizing regimens, an objective radiological response was achieved in 64% (range 43%-79%) patients; 22.6% underwent macroscopically curative liver resection (most studies reported a range of 12.5%-45%) and R0 resection rate was 87%. The median OS and DFS after liver metastasectomy were 45 and 14 months respectively

Lam VW, Spiro C, Laurence JM, Johnston E, Hollands MJ, Pleass HC, Richardson AJ. A systematic review of clinical response and survival outcomes of downsizing systemic chemotherapy and rescue liver surgery in patients with initially unresectable colorectal liver metastases. *Ann Surg Oncol.* 2012;19:1292–1301. [PubMed] [Google Scholar]

- The optimal regimen for conversion to operable disease remains unclear.
- Standard doublet chemotherapy FOLFOX or FOLFIRI had conversion rates between 9% to 33%
- FOLFOXIRI improved the secondary R0 resection rate from 12% to 36%, median PFS from 6.9 to 9.8 mo, and median OS from 16.7 to 22.6 mo; albeit at the cost of greater but manageable toxicity e.g., peripheral neuropathy and neutropenia

Kanaz O. Current treatment options for patients with initially unresectable isolated colorectal liver metastases. *World J Clin Oncol.* 2016;7:9–14. [PMC free article] [PubMed] [Google Scholar]  
Falcone A, Ricci S, Brunetti I, Pflümer E, Alliegnini G, Barbara C, Crinò L, Benedetti G, Evangelista VV, Fanchini L, Cortesi E, Picone V, Vitello S, Chiara S, Granetto C, Porcile G, Fioretto L, Orlandini C, Andreuccetti M, Masi G. Gruppo Oncologico Nord Ovest. Phase III trial of infusional fluorouracil, leucovorin, oxaliplatin, and irinotecan (FOLFOXIRI) compared with infusional fluorouracil, leucovorin, and irinotecan (FOLFIRI) as first-line treatment for metastatic colorectal cancer: the Gruppo Oncologico Nord Ovest. *J Clin Oncol.* 2007;25:1670–1676. [PubMed] [Google Scholar]

## Targeted therapy + ChT

- Addition of targeted agents is recommended by guidelines, but there is no concrete supporting evidence.
- In a large RCT, giving bevacizumab together with XELOX/ FOLFOX only moderately improved resectability (from 6.1% to 8.4%) and PFS (from 8 to 9.4 mo), but did not prolong OS.
- According to a recent meta-analysis, the combination of bevacizumab and FOLFOXIRI offers more promising results – the R0 surgery conversion rate was 28.1%, and the median OS and PFS were 30.2 and 12.4 mo respectively

Salz L, Clarke S, Diaz-Rubio E, Scheithauer W, Figer A, Wong R, Koski S, Lichteniser M, Yang TS, Rivera F, Couture F, Sirzén F, Cassidy J. Bevacizumab in combination with oxaliplatin-based chemotherapy as first-line therapy in metastatic colorectal cancer: a randomized phase III study. *J Clin Oncol*. 2008;26:2013–2019. [PubMed] [Google Scholar]  
Tomasello G, Petrelli F, Ghidini M, Russo A, Passalacqua R, Barni S. FOLFOXIRI Plus Bevacizumab as Conversion Therapy for Patients With Initially Unresectable Metastatic Colorectal Cancer: A Systematic Review and Pooled Analysis. *JAMA Oncol*. 2017;3:e170278. [PMC free article] [PubMed] [Google Scholar]

## Targeted therapy + ChT

- Multiple randomized trials have shown the addition of cetuximab to chemotherapy in RAS wild-type (WT) unresectable disease improved the R0 resection rate by 2-3 folds.
- An increase in complete resection rate from 11 to 18%, however, did not translate into survival benefit in a meta-analysis.

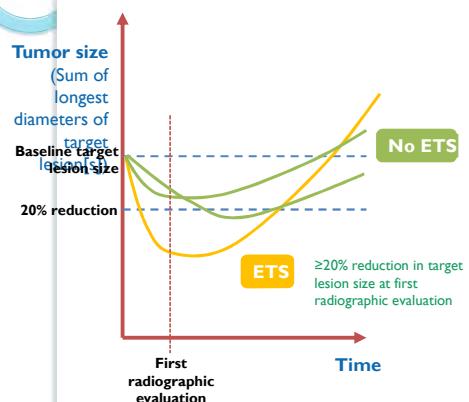

Kanaz O. Current treatment options for patients with initially unresectable isolated colorectal liver metastases. *World J Clin Oncol*. 2016;7:9–14. [PMC free article] [PubMed] [Google Scholar]  
Ye LC, Liu TS, Ren L, Wei Y, Zhu DX, Zai SY, Ye QH, Han Y, Xu B, Qin XY, Xu J. Randomized controlled trial of cetuximab plus chemotherapy for patients with KRAS wild-type unresectable colorectal liver-limited metastases. *J Clin Oncol*. 2012;30:1931–1938. [PubMed] [Google Scholar]

## Targeted therapy + ChT

- Panitumumab, another anti-EGFR agent, has also been linked with greater likelihood of curative resection when added to FOLFOX (29% vs 17%) in KRAS-WT unresectable CRLM.

Peeters M, Tabernero J, Douillard JY, Siena S, Davison C, Braun S, Sidhu R, Ohrling K. Resection rates and survival in patients with wild-type KRAS/NRAS metastatic colorectal cancer and liver metastases: data from the PRIME study. In: Eggermont AMM, editors. Abstract book for Markers in cancer: a joint meeting by ASCO, EORTC and NCI; 2013 Nov 7-9, Brussels, Belgium. Eur J Cancer. 2013;49 suppl 4:S17–18. [Google Scholar]

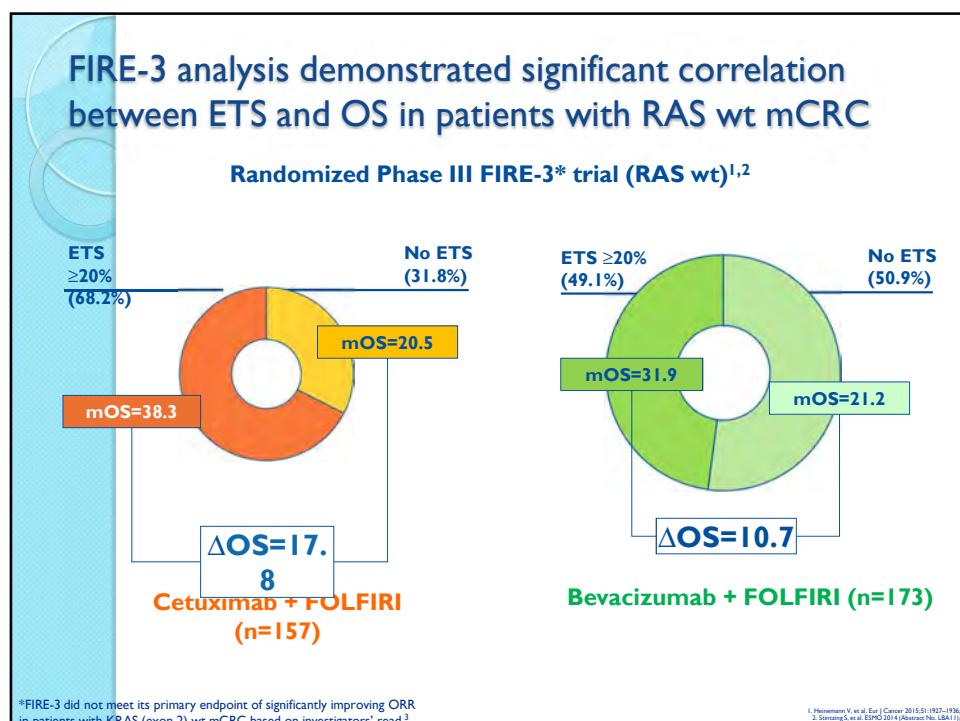

## What is early tumor shrinkage?

**ET S**  
Early Tumour Shrinkage

- On-treatment marker of response to treatment<sup>1</sup>
- First suggested in 2009, on basis of rapid tumor shrinkage with cetuximab in a subset of patients in the BOND study<sup>1</sup>
- Hallmark of tumor EGFR dependency and cetuximab sensitivity

1. Piessevaux H, et al. Ann Oncol. 2009;20:1375-82.

**Correlation between ETS and increased OS has been consistently observed in 1st line Phase III clinical trials**

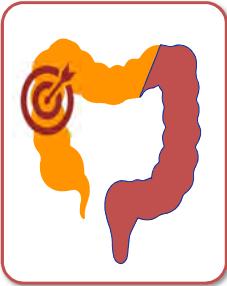

Trial	Biomarker status	Treatment regimen (n)	OS, months		$\Delta OS$ , months
			ETS <20%	ETS ≥20%	
<b>CRYSTAL<sup>1</sup></b>	KRAS exon 2 wt*	FOLFIRI + cetuximab (n=299)	18.6	30.0	<b>11.4</b>
		FOLFIRI (n=332)	18.6	24.1	5.5
<b>FIRE-3**2</b>	RAS wt	FOLFIRI + cetuximab (n=157)	20.5	38.3	<b>17.8</b>
		FOLFIRI + bevacizumab (n=173)	21.2	31.9	10.7
<b>PRIME<sup>3</sup></b>	RAS wt	FOLFOX4 + panitumumab (n=219)	12.6	32.5	<b>19.9</b>
		FOLFOX4 (n=221)	15.2	26.0	10.8
<b>TRIBE<sup>4</sup></b>	Unselected	FOLFOXIRI + bevacizumab/ FOLFIRI + bevacizumab (n=407)	21.9†	31.9†	<b>10.0</b>

\*KRAS exon 2 wt population; Cetuximab is approved in patients with RAS wt mCRC.<sup>6</sup> Cetuximab is not indicated for the treatment of patients with mCRC whose tumors have RAS mutations or for whom RAS tumor status is unknown.<sup>3</sup> Douillard JY, et al. Eur J Cancer 2015;51:1231-1242;  
\*\*FIRE-3 did not meet its primary endpoint of significantly improving ORR in patients with KRAS (exon 2) wt mCRC – 4. Cremolini C, et al. Ann Oncol 2015;26:1188-1194;  
based on investigators' read.<sup>6</sup>  
†Not including the first four months after randomization.

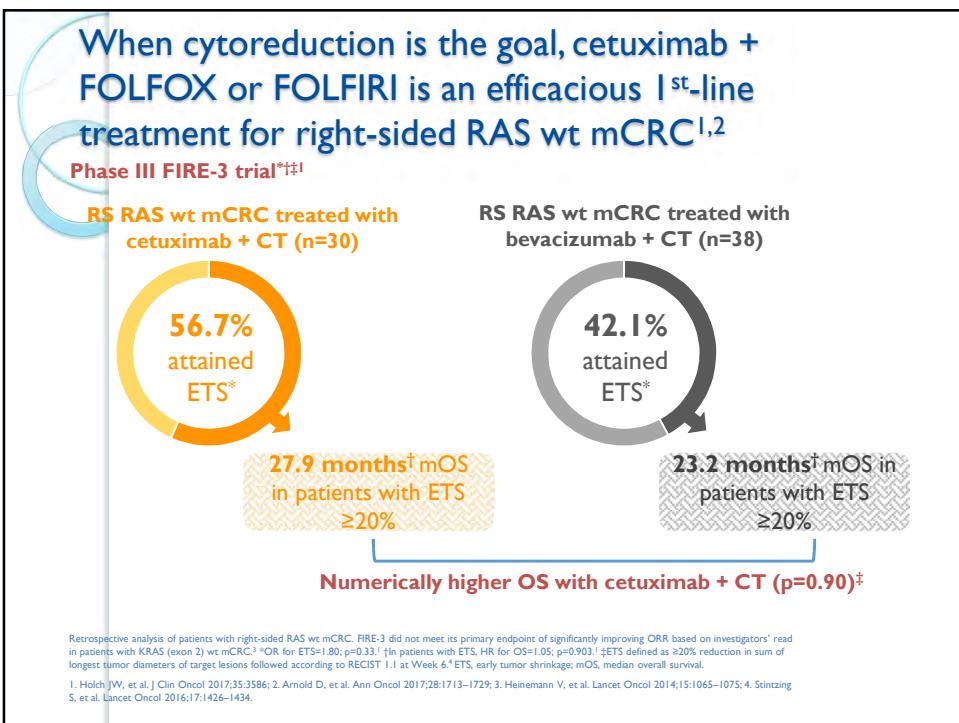

**Cytoreduction is a primary goal for patients with RS mCRC<sup>1,2</sup>**

 **ESMO guidelines recommend cytoreduction (tumor shrinkage) as the primary goal for patients in need of:<sup>2</sup>**

- Conversion to resectable disease
- Avoidance of impending clinical threat
- Prevention of impending organ dysfunction
- Alleviation of severe symptoms

1. Yoshino T, et al. Ann Oncol 2018;29:44–70; 2. Van Cutsem E, et al. Ann Oncol 2016;27:1386–1422.

- The role of neoadjuvant therapy in operable disease is still controversial, while the use of adjuvant chemotherapy has gained generalized acceptance.
- Chemotherapy doublets or triplets+ biological drugs are currently recommended as first-line treatment in unresectable CRLM.

- In the absence of standardized evidence-based protocols, the optimal management of CRLM should be determined by a multi-disciplinary team.

# Resekabilnost

**IC**

- PRETEKLOST
- Kaj odstranimo?
  - Število JZ
  - Velikost JZ
  - ZJZ

- DANES
- Kaj ostane?
  - R0 resekacija
  - FRV

22.11.2019, OI, 9. Šola tumorjev prebavil

## Neresektabilnost JZ

### ○ Sodobni kriteriji neresektibilnosti JZ so:

- R0 resekcija ni mogoča:
  - Histološko + rob (?),
  - Neodstranljivost katerekoli **zaznane** razširjenosti bolezni ,
  - Progres bolezni ob KT.

22.11.2019, OI, 9. Šola tumorjev prebavil

## Resektabilnost

### ○ JZ so resekabilni, ko lahko dosežemo R0 resekcijo, tako da:

- Ohranimo dva skupaj ležeča segmenta (od 8) z ohranjeno jetrno veno in portalno triado,
- Ohranimo funkcionalno zadosten del jeter.

22.11.2019, OI, 9. Šola tumorjev prebavil

## Delovanje ostanka

- Prostornina FRV napove delovanje ostanka jeter po resekciji in pooperativni potek.
- Pri bolnikih z resekcijo jeter
  - FRV = 20% zapleti v 50%,
  - FRV > 20% zapleti v 13%.
- $FRV_{min}$  je odvisen od:
  - Zaplenjenosti posega na jetrih,
  - Sočasnih posegov,
  - Komorbiditete,
  - Stanja jetrnega parenhima.

22.11.2019, OI, 9. Šola tumorjev prebavil

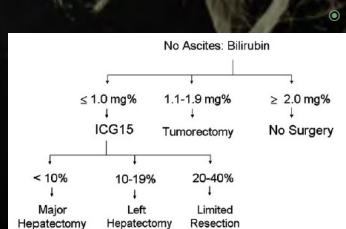

## Delovanje ostanka

- Pri bolnikih z resekcijo jeter

- Neprizadet jetrni parenhim
- KT, steatoza, hepatitis
- Ciroza

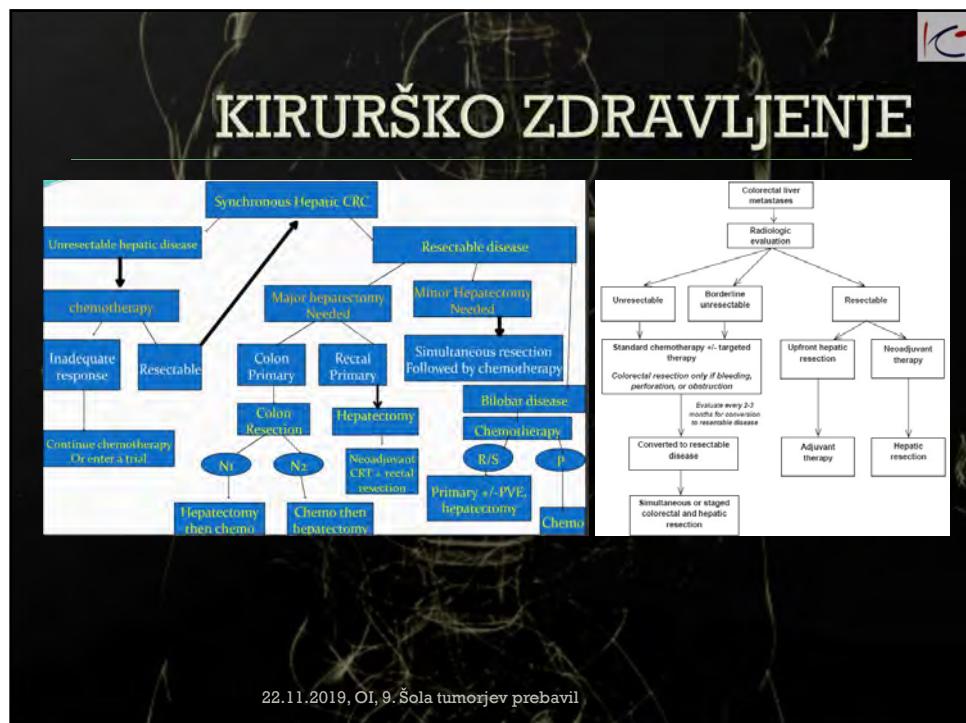

$FRV_{min} > 20\%$ ,  
 $FRV_{min} > 30\%$ ,  
 $FRV_{min} > 40\%$ .

22.11.2019, OI, 9. Šola tumorjev prebavil

- LIMON – očistek indocyanine zelene (ICG)
- Japonski algoritem – MR 0%

22.11.2019, OI, 9. Šola tumorjev prebavil

## Dvostopenjska hepatektomija

### Omogoči hipertrofijo ostanka jeter.

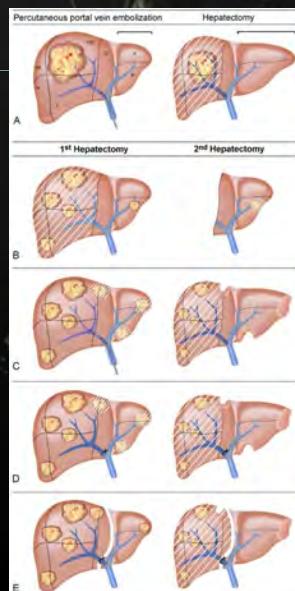

- Kadar ni možno odstraniti vseh zasevkov med enim posegom (bilobarni JZ),
- To uspešno kombiniramo z sinhrono resekcijo primarnega tumorja ob prvem posegu, ali z EPV.

### 5- letno preživetje 42% pri izbranih bolnikih.

22.11.2019, OI, 9. Šola tumorjev prebavil

## Dvostopenjska hepatektomija

### ALPPS

ALPPS in Right Trisectionectomy: a Safe Procedure to Avoid Postoperative Liver Failure?

Jun Li • Paolo Girotti • Ingmar Königrainer • Ruth Ladurner • Alfred Königrainer • Silvio Nadalin

22.11.2019, OI, 9. Šola tumorjev prebavil

## Sinhrona resekcija

- Izvedljiva pri  $\frac{1}{4}$  bolnikov z JZ.
- Omogoča hkratno odstranitev celotnega tumorskega bremena.
  - Skrajša hospitalizacijo
  - Zniža stroške ob sprejemljivi obolevnosti.
- Odločitev za tehniko temelji na:
  - Obsegu obeh posegov
  - Oceni sinergističnih učinkov na zaplete
  - Tveganje je nižje pri posegih < od 4 segmentov in pri posegih na desnem DČ

22.11.2019, OI, 9. Šola tumorjev prebavil

## Sinhrona resekcija

- Priporoča se pri:
  - 4 ali < segmentov pri posegih na desnem DČ.
  - 2 ali < oz. atypične resekcije pri posegih na levem DČ.

22.11.2019, OI, 9. Šola tumorjev prebavil

## Synchronous Colorectal Liver Metastases: Is It Time to Reconsider Traditional Paradigms of Management?

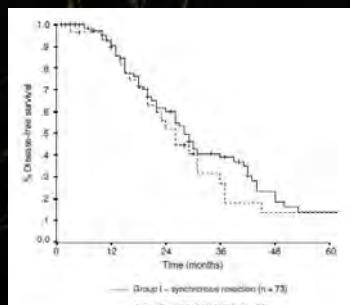

Srinevas K. Reddy, MD, Andrew S. Barbas, MD, and Bryan M. Clary, MD

Department of Surgery, Duke University Medical Center, Box 3247, Durham, NC

### PREŽIVETJE PO RESEKCIJI

recent studies have demonstrated long-term survival after resection of synchronous CLM. Bockhorn et al. show no difference in overall (5-year 47% vs. 39%;  $P = .78$ ) or disease-free (5-year 33% vs. 13%,  $P = .28$ ) survival between 63 patients with synchronous disease and 63 patients with metachronous disease who underwent margin-negative resection of CLM.<sup>60</sup> Similarly, Minagawa et al. show no difference in overall survival between 187 synchronous and 182 metachronous patients after hepatic extirpation (3-year, 5-year, 10-year 49%, 35%, 25% vs. 55%, 41%, 28%,

22.11.2019, OI, 9. Šola tumorjev prebavil

## Tradicionalni / sinhroni - zapleti

### Synchronous Resection of Colorectal Primary Cancer and Liver Metastases

World J Surg (2007) 31:1496–1501

Tristan D. Yan · Francis Chu · Deborah Black ·  
Denis W. King · David L. Morris

DOI 10.1007/s00268-007-9085-4

Perioperative adverse events-	Total (no.)	Group I (no.)	Group II (no.)	p
Total	103 (100%)	73 (100%)	30 (100)	—
Wound infection	21 (20%)	14 (19%)	7 (23%)	0.788
Perihepatic collection	13 (13%)	10 (14%)	3 (10%)	0.751
Bile leak	2 (2%)	1 (1%)	1 (3%)	0.500
Other intraabdominal collection	14 (14%)	9 (12%)	5 (17%)	0.543
Respiratory complication	8 (8%)	5 (7%)	3 (10%)	0.689
Cardiac complication	1 (1%)	1 (1%)	0	1.000
Septicemia	2 (2%)	1 (1%)	1 (3%)	0.500

22.11.2019, OI, 9. Šola tumorjev prebavil

## “Colon V Liver “ FIRST

### ○ ‘liver-first’

- Namen je preprečiti progres JZ med zdravljenjem TU DČ pri ASIMPTOMATSKIH bolnikih
  - Predvsem pri resekcijah DČ z visokim tveganjem.
  - Dehiscenca anastomoze pomembno podaljša čas do resekcije jeter ali KT.

### ○ ‘colon-first’

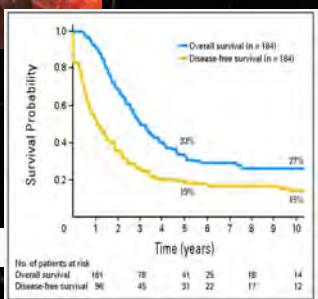

- Simptomatski tumorji
  - Stenoze, krvavitev...

22.11.2019, OI, 9. Šola tumorjev prebavil

## Metahroni JZ

- Boljša prognoza
- Resektabilni – OP
- Neresektabilni
  - Down-sizing s KT
  - Drugi postopki, ki spremene JZ v resekabilne.

Adam R et al. JCO 2009;27:1829-1835

22.11.2019, OI, 9. Šola tumorjev prebavil

## Ponovne resekije

- ⦿ Kadar je R0 resekcija možna, so rezultati 5-letnega preživetja podobni rezultatom primarnih resekcijs.

Reference/year	Number of patients	Overall Survival	Median Survival (in months)
Que,FG /1994 <sup>c</sup>	21	43%, 4 year	41

22.11.2019, OI, 9. Šola tumorjev prebavil

**Table 2.** Contraindications to hepatic resection in patients with CRC liver metastases (adapted from Adam et al. [148] with permission from AlphaMed Press)

Category	Contraindication
Technical (A)	
1. Absolute	Impossibility of R0 resection with $\geq 30\%$ liver remnant Presence of unresectable extrahepatic disease
2. Relative	R0 resection possible only with complex procedure (portal vein embolisation, two-stage hepatectomy, hepatectomy combined with ablation <sup>a</sup> ) R1 resection
Oncological (B)	
1.	Concomitant extrahepatic disease (unresectable)
2.	Number of lesions $\geq 5$
3.	Tumour progression

Patients should be categorised as A1 or A2/B1, B2 or B3.

<sup>a</sup>All methods, including radiofrequency ablation.

Vsek pacient bi moral  
biti opredeljen kot:

Npr. A1/B2

22.11.2019, OI, 9. Šola tumorjev prebavil

**Table 5.** Historical ESMO groups for treatment stratification of fit patients with metastatic CRC [5]

	Group 0 Resectable	Group 1 Potentially resectable	Group 2 Not resectable	Group 3 Not resectable
Clinical presentation	Clearly resectable R0 liver and/or lung disease	Unresectable liver/lung-limited disease which might become resectable after response to conversion therapy	Multiple metastases/sites Tumour-related symptoms Able to withstand intensive therapy	Asymptomatic Multiple metastases Never able to undergo resection Unsuitable for intensive therapy Frail with co-morbidities
Treatment goal	Cure (NED)	Maximum tumour shrinkage	Clinically relevant tumour shrinkage Disease control	Halt/slow tumour progression Tumour shrinkage less relevant Tolerability most relevant
Treatment intensity	Surgery Immediate surgery with no prior chemotherapy or moderate (FOLFOX) perioperative chemotherapy	<i>Intensive treatment approach</i>		<i>Less intensive treatment approach</i> Treatment selected according to patient preference Sequential approach (start with single agent or doublet with low toxicity) FOLFOX an exception

CRC, colorectal cancer; FOLFOX, infusional 5-fluorouracil, leucovorin, oxaliplatin; NED, no evidence of disease.

22.11.2019, OI, 9. Šola tumorjev prebavil

## Kirurga zanimajo:

- (A) Bolniki s takoj resekabilni zasevki
- (B) Bolniki, ki postanejo resekabilni s konverzijo

22.11.2019, OI, 9. Šola tumorjev prebavil

## Pravila

- Tehnična resekabilnost in prognostični dejavniki vplivajo na perioperativno KT
- Takojsnja resekcija le pri tistih kjer dosežemo z lahkoto R0 in ugodnimi prognostičnimi dejavniki – vsi drugi KT

22.11.2019, OI, 9. Šola tumorjev prebavil

# SBRT JETERNIH ZASEVKOV

Irena Oblak

- ▶ Moderna tehnika obsevanja;
- ▶ Omogoča ↑ D na TU (ablativno);
- ▶ 1 do nekaj frakcij ( $\downarrow$ OTT);
- ▶ Neinvazivna metoda (brez anestezije, bolečin...);
- ▶ Ambulantno zdravljenje;
- ▶ Odlična lokalna kontrola primarnega TU ali M+;
- ▶ Zadovoljiv toksični profil.

STEREOTAKTIČNA RADIOTERAPIJA

- ▶ Velikost:  $\leq$  6 cm;
- ▶ Št. lezij:  $\leq$  5;
- ▶ Brez aktivne ekstrahepatične bolezni;
- ▶  $> 700$  cc zdravih jeter;
- ▶ Fokalni TU;
- ▶  $> 5$  mm od lumna črevesja

## KRITERIJI ZA SBRT

- **Gibanje:**  
a). dihanje: jetra ob dihanju tudi 4 cm sup-inf (mediana 1.8 cm)  
{4-DCT, abdominalna kompresija ali ABC sistem};
- **Slaba vidljivost zasevkov na CT, ki se uporablja med RT za detekcijo tarče:**  
Vstavitev 3 zlatih zrn (3-D projekcija)

## TEHNIČNO ZAHTEVNA TEHNIKA

12.05.2017

- Zasevke, ki ležijo blizu večjih žil;
- Za bolnike, ki niso primerni za ostale ablativne metode;
- Za bolnike, ki niso operabilni zaradi komorbiditete, neresektabilnega zasevka ali OP odklonijo.

METODA JE ŠE POSEBEJ PRIMERNA ZA:

## IZSLEDKI RAZISKAV

Study	Year	% patients with grade 1–2 toxicity	% patients with grade 3–5 toxicity	1-year local control	2-year local control
Lee <i>et al.</i>	2009	Not reported	13%	71%	Not reported
Rusthoven <i>et al.</i>	2009	Not reported	3%	95%	92%
Vautravers-Dewas	2011	Not reported	2%	90%	86%
Rule <i>et al.</i>	2011	Not reported	0%	100% (50 Gy cohort)	89% (50 Gy cohort)
Scorsetti <i>et al.</i>	2014	78%	0%	95%	91%
Mendez Romero <i>et al.</i>	2016	96%	20%	100% (metastases only)	86% (metastases only)
Meyer <i>et al.</i>	2016	Not reported	0%	100%	100%
Goodman <i>et al.</i>	2016	54%	0%	77%	Not reported
Anstadt <i>et al.</i>	2018	26%	0%	86%	80%

- Lee, 2009: 68 bolnikov z neresektabilnimi zasevkami v jetrih CRC raka, raka dojke, žolčnika,...

**CRC in rak dojke ima daljše preživetje v primerjavi z ostalimi raki**

- Swaminath, 2011:

**nekateri bolniki z 1-5 zasevkov v jetrih po SBRT živijo 5-10 let brez bolezni**

- Scorsetti, 2013: 57 bolnikov z 77 zasevkami v jetrih CRC, raka dojke, 36% bolnikov stabilno extrahepatično bolezen

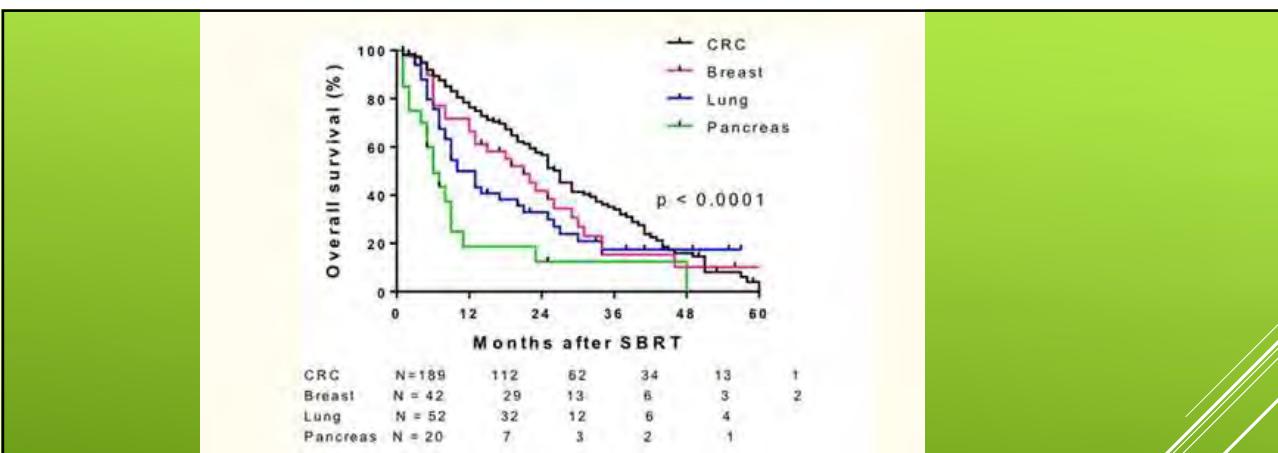

**LC 94%**

## UGOTOVITVE NEKATERIH RAZISKOVALCEV

- Omogoča 70-100% LC in 60-90% OS pri 2 letih.
- Boljša LC pri:
  - manjših zasevkih;
  - uporabi BED  $\geq 100\text{Gy}$ ;
  - uporabi sistemov za kontrolo dihanja;
  - zasevkih CRC ali raka dojke.

## IZID ZDRAVLJENJA GLEDE NA PATHOHISTOLOŠKI PODTIP

Mahadevan A, et all. Stereotactic Body Radiotherapy (SBRT) for liver metastases – clinical outcomes from the international multi-institutional RSSearch® Patient Registry. Radiat Oncol 2018;13-26.

## IZID ZDRAVLJENJA GLEDE NA BED IN VELIKOST

Mahadevan A, et all. Stereotactic Body Radiotherapy (SBRT) for liver metastases – clinical outcomes from the international multi-institutional RSSearch® Patient Registry. Radiat Oncol 2018;13-26.

APRIL 2018-SEPTEMBER 2019

Obsevanih 21 bolnikov:

- 14 jetra (pri 2 bolnikih 2 leziji, 1 bolnik z lezijo 2r:9cm)
- 7 pancreas

**SBRT JETER**

DG primarnega TU:

- 5 CRC
- 2 Ca dojke
- 1 Ca anusa
- 1 holangioCa
- 1 Ca pancreas
- 2 HCC
- 1 LeiomioSA
- 1 Origo (2x ca pljuč, hipernefrom, Ca mehur, Ščitnica?)

## AKUTNA TOKSIČNOST- BREZ G3-4

nauzea	bruhanje	utrujenost	bolečine	inapetenca
7 (33,3%)	1 (4,7%)	6 (28,6%)	3 (14,3%)	3 (14,3%)

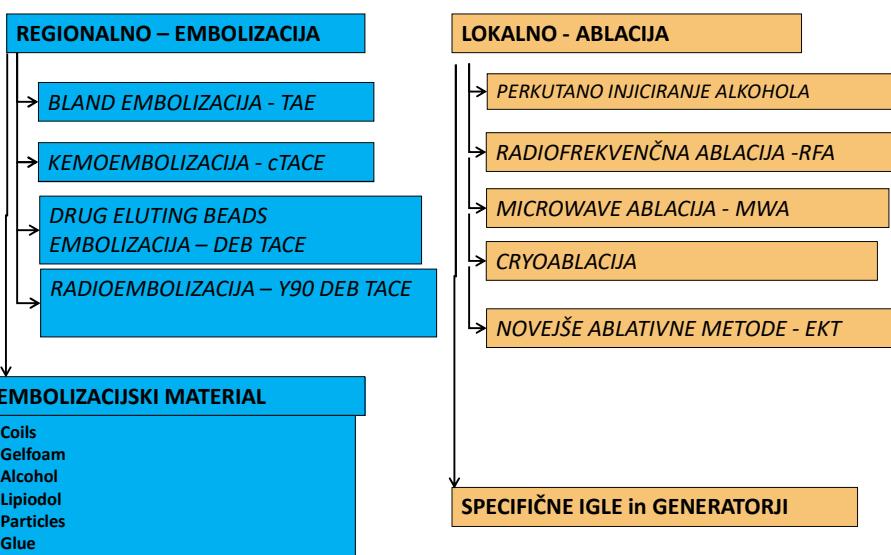

## ODGOVOR NA ZDRAVLJENJE

Kompletni	Parcialni	Stagnacija	Progres
7	3	1	0

# NEKIRURŠKO LOKALNO ZDRAVLJENJE JETRNIH ZASEVKOV

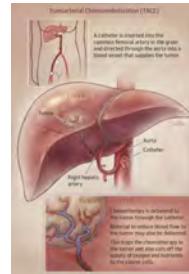

Nina Boc, dr. med.

## MINIMALNO INVAZIVNO ZDRAVLJENJE SPREMEMB

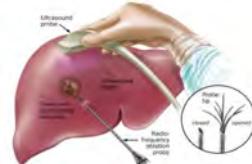

## MINIMALNO INVAZIVNO ZDRAVLJENJE sprememb - pristopi

- Perkutani žilni pristopi – REGIONALNA TERAPIJA = EMBOLIZACIJA

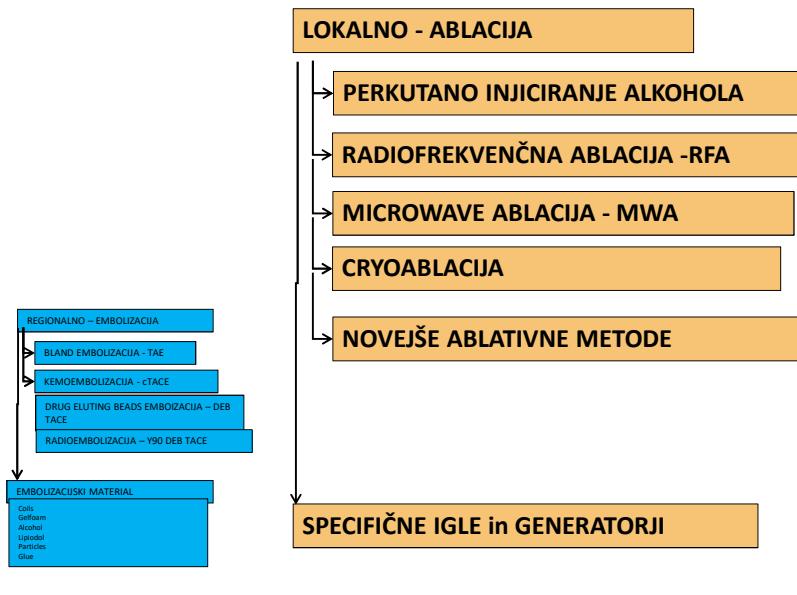

- Perkutani nežilni pristopi – LOKALNA TERAPIJA = ABLACIJA

## MINIMALNO INVAZIVNO ZDRAVLJENJE

- HCC
- metastaze mehka tkiva, jetra, pljuča, kosti/primarni tumorji
  - nevroendokrini
  - kolorektalni
  - dojka
  - melanom
  - RCC
  - pljuča
  - prostata

## MINIMALNO INVAZIVNO ZDRAVLJENJE SPREMENB

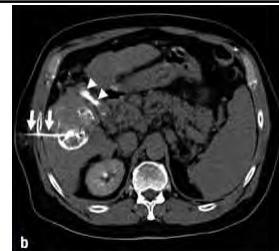

## ABLACIJA

- direktno injiciranje (alkohol, vroča FR.)
- vročina (RFA, MWA, HIFU..)
- zmrzovanje (krioablacija)
- prednosti v primerjavi s kirurgijo:
  - manjša morbiditeta in mortaliteta
  - nižji stroški hospitalizacije

## PEI

- perkutano injiciranje alkohola – kemična koagulativna nekroza
- dobra lokalna kontrola pri psevdoinkapsuliranih tumorjih velikosti do 2 cm
- srednje preživetje 3 in 5 let 50% do 80% in 28% do 48% \*
- ni enakovreden ablativnim metodam, vendar ima manj zapletov

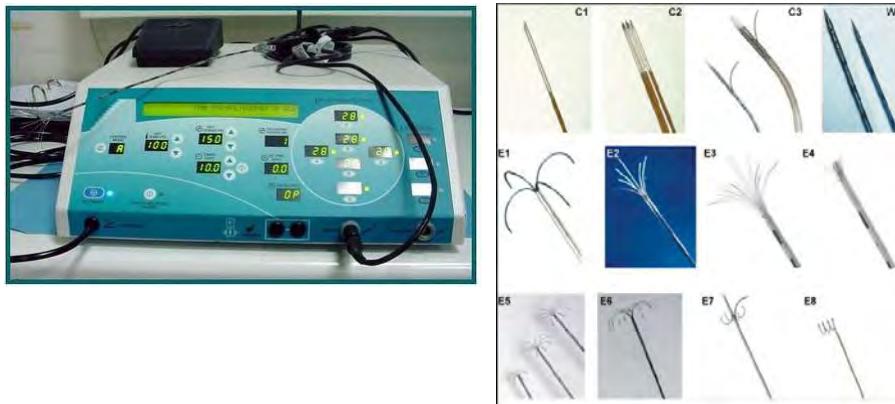

\*Arii S, Yamaoka Y, Futagawa S et al.: Results of surgical and nonsurgical treatment for small-sized hepatocellular carcinoma: a retrospective and nation wide survey in Japan. The Liver Cancer Study Group of Japan. Hepatology 2000; 32: 1224–9

## RADIOFREKVENČNA ABLACIJA - RFA

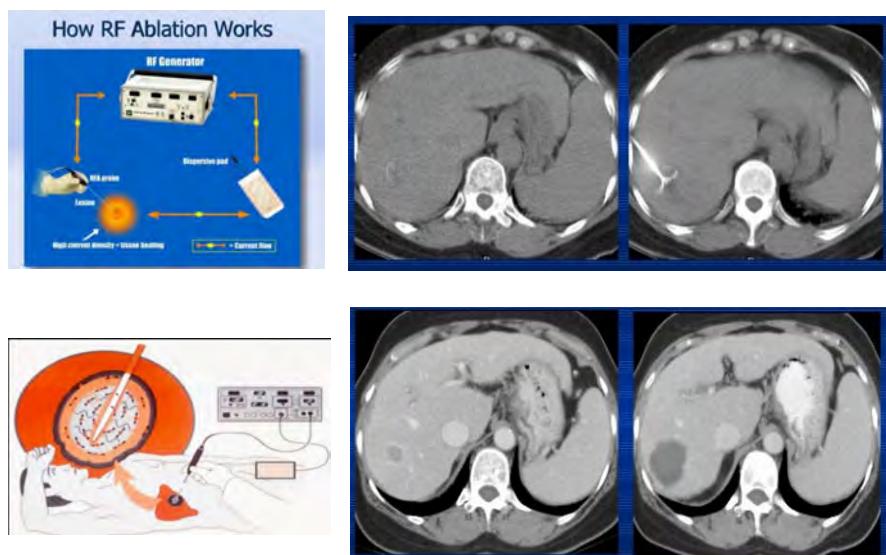

- termična citotoksičnost
- INDIKACIJE:
  - Neresektabilni tumorji (primarni/sekundarni)
  - Multiple lezije ≤3
  - Velikost ≤ 5 cm
- KONTRAINDIKACIJE:
  - Koagulopatije, PM
  - Ascites (perkutani pristop)
  - Neugoden položaj lezije (perkutani pristop)
  - Bližina pomembnih struktur (žolčni vodi, velike žile)
  - Ekstrahepatična bolezen
- ZAPLETI
  - 3,5% vseh zapletov, 0,04% smrti, 0,47% infarkt, 0,19% absces, 0,67% poškodba žolčnih vodov (\*\*Koda et al)

\*Lau et. Al. Annals of Surgery 2003  
\*\*Koda M et al. Complications of radiofrequency ablation for hepatocellular carcinoma in a multicenter study: An analysis of 16346 treated nodules in 13283 patients. Hepatol Res 2012; 42

## RFA GENERATOR in IGLE

## RADIOFREKVENČNA ABLACIJA - RFA

## RFA VS. KRG RESEKCIJA

Author	DX	RX	N	Local Recurrence (OR)	Overall survival (OR)
Wu et al [1]	CLM	LR	273	-	0.41, 95% CI: 0.22-0.90, P = 0.008(5 yr)
		RFA	574	4.89, 95% CI: 1.73-13.87, P = 0.003	-
Amerongen et al [2]	CLM	RFA	1060	1.66, 95%	2.35, 95% CI = 1.49-3.69, P = 0.001(5 yr)
		LR	1817	CI = 1.15-2.40, P = 0.007	-

- RFA je minimalno invazivna tehnika z manj komplikacijami kot krg. resekcija
- RFA ima več recidivov in manjši DFS in OS in je le za bolnike, ki niso kandidati za krg

Radiofrequency ablation compared to surgical resection for curative treatment of patients with colorectal liver metastases – a meta-analysis

Martens J, van Amerongen A, Steentjes F, Jonkersma A, Peter D, van den Boossem H, Jansen L, Fidder H, Johannes W, de Witte P.

J Gastrointest Surg. 2011 Feb;15(2):341-20. doi: 10.1016/j.jgs.2010.07.030.

Radiofrequency ablation versus surgical resection for hepatocellular carcinoma in Childs A cirrhotics-a retrospective study of 1,061 cases.

Damus J, Hwang J, Kimura K, Goto M, Taki T, Haga T, Yamada T, Matsuyama S.

## RFA VS. RRS

Acta Oncol. 2013 Jun;52(5):971-7. doi: 10.3109/0284186X.2013.766362. Epub 2013 Feb 14.

### Percutaneous radiofrequency ablation (RFA) or robotic radiosurgery (RRS) for salvage treatment of colorectal liver metastases.

Stintzing S<sup>1</sup>, Grothe A, Hendrich S, Hoffmann RT, Heinemann V, Rentsch M, Euerweger C, Muacevic A, Trumm CG.

#### Author information

1 Department of Medical Oncology and Comprehensive Cancer Center, Klinikum Grosshadern, LMU, Munich, Germany.  
sebastian.stintzing@med.uni-muenchen.de

- RRS – single session robotic radiosurgery
- Boljša lokalna kontrola DFS 34.4 mes vs. 6.0 mes; p < 0.001
- median FFDR (freedom to distant recurrence) 11.4 mes RRS vs. 7.1 mes RFA p = 0.25
- Ponovitev 67% RRS in 63% RFA, p > 0.99

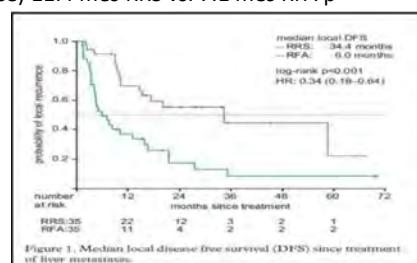

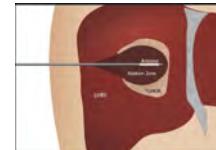

Figure 1. Median local disease free survival (DFS) since treatment of liver metastases.

# MICROWAVE ABLACIJA - MWA

- INDIKACIJE (podobne kot za RFA)
  - Velikost je lahko večja kot pri RFA do 5 cm
- KONTRAINDIKACIJE – enake kot RFA
- ZAPLETI
  - Pomembne komplikacije 4,6% (RFA 4,1%), smrtnost 0,23% (RFA 0,15%), krvavitev, tromboza portalne vene, bilomi, abscesi, plevralni izliv, tumor seeding

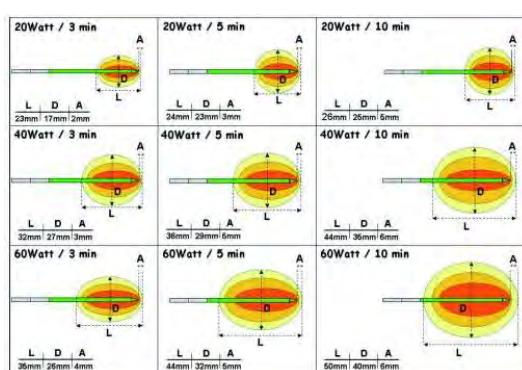

## MWA VS. KRG

- MWA je minimalno invazivna tehnika z manj komplikacijami kot krg. Resekcija in nekaj več komplikacijami kot RFA
- MWA ima več recidivov \*(46% v 14 mesecih) in manjši DFS in OS in je le za bolnike, ki niso kandidati za krg

## Microwave ablation compared with radiofrequency ablation for treatment of hepatocellular carcinoma and liver metastases: a systematic review and meta-analysis

Authors Glassberg MB, Ghosh S, Choueiri TY, Geller BA, Ferko NC, Saderboladze G, Wright GW, Amaral JF  
Received 14 January 2018  
Accepted for publication 29 June 2018  
Published 17 August 2018 volume 2019:12 Pages 602–630

MWA VS. RFA

- 1379 študij
- Lokalna kontrola tumorjev je boljša – za 30% manj lokalnega progrusa tumorja pri MWA vs RFA in 45% (samo randomizirane študije)
- Varnost je enaka
- Boljši outcome pri MWA pri večjih tumorjih  $\geq 2,5$  cm

## Microwave ablation compared with hepatic resection for the treatment of hepatocellular carcinoma and liver metastases: a systematic review and meta-analysis

Mrudula B, Glassberg, Sudip Ghosh, Jeffrey W Clymer, George W J Wright, Nicole Ferko & Joseph E Amaral

*World Journal of Surgical Oncology* 17, Article number: 98 (2019) | Cite this article  
1197 Accesses

MWA VS. KRG

- 1845 študij
- Lokalna ponovitev signifikantno višja pri MWA (risk ratio =2,49; P=0,016)
- Krg resekcija signifikantno boljši 3- in 5- letni OS (RR=0,94; P= 0,03 in RR=0,88; P=0,01)
- MWA krajša hospitalizacija, manjša izguba krvi, manj komplikacij

IZZIVI

- Malo študij primerjave lokalnih tehnik – največ pri HCC
- lokalni recidivi – v literaturi okrog 10% (2-60% - zlasti pri lezijah ob žilah)
- MWA ima manjši vnetni odgovor na lokalno terapijo
- kirurška resekcija = zlati standard!

## KRIOABLACIJA

- INDIKACIJE (enake kot za RFA)
- KONTRAINDIKACIJE
  - enake kot za RFA
- SLABOSTI
  - Variabilna velikosti – multiple krioprobe
  - Manjši zmrzovalni efekt ob heparatih žilah
  - Boljša lokalna kontrola kot pri RFA
- PREDNOSTI
  - Boljša vizualizacija ledene krogle med posegom
- ZAPLETI – več pomembnih zapletov v primerjavi z RFA (29% vs. 8% ali 41% vs. 3%)
  - Krvavitve, poškodbe žolčnih vodov (lahko tudi pozni zapleti), priležnih organov – kriošok (izplavljanje citokinov – sistemski odziv z vročino, tahikardijo, tahipnejo)
  - Manjše komplikacije 48.6% - vročina, bolečina, plevralni izliv, AV fistula

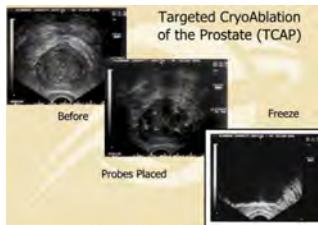

Adam et.al. A comparison of percutaneous cryosurgery and percutaneous radiofrequency for unresectable hepatic malignancies. Arch Surg 2002

**TARGETED CRYOABLATION OF THE PROSTATE (TCAP)**

- Transrectal Ultrasound Guided
- Transperineal Placement of 6-8 CRYOprobes
- Transperineal Placement of 4-6 TEMPProbes

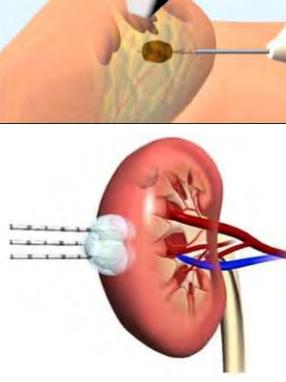

**Targeted CryoAblation of the Prostate (TCAP)**

Before  
Probes Placed  
Freeze

**Cryoablation**

- 1.5, 1.7 and 2.4mm percutaneous probes
- Argon based systems
- Ice ball visible with CT,US, MRI
- Relatively painless during treatment
- Multiple applicators

## (ŠE)NOVEJŠE METODE

**(MR-) HIFU**  
high-intensity  
focused  
ultrasound

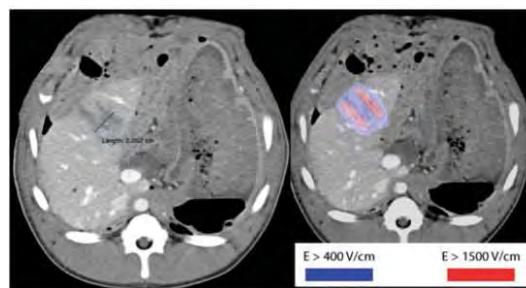

- The Sonablate® 500 is a medical device that uses HIFU to thermally ablate the prostate.
- Ideal HIFU candidate:
  - Localized prostate cancer
  - PSA < 10
  - Gleason ≤ 7
  - Prostate Volume 40 cc
  - Other patients may also qualify and should discuss their specific case with a physician.

- International HIFU Centers**

## MINIMALNO INVAZIVNO ZDRAVLJENJE SPREMemb (PRETEŽNO) V JETRIH

## TRANS-ARTERIJSKA EMBOLIZACIJA

- Bland embolizacija (TAE) -> lipiodol
- Konvencionalna kemoembolizacija (cTACE)-> lipiodol+chemoterapija
- Drug-eluting BEADS kemoembolizacija (DEB-TACE) -> delci + Y sevalec
- Radioembolizacija -> delci + Y sevalec
- Princip = embolizacija feeding arterije in citostatik/sevalec lokalno
- Kemoembolizacija in radioembolizacija = paliativno zdravljenje
- Lahko kombiniramo z ostalimi ablativnimi tehnikami

## TAE/cTACE/DEB-TACE

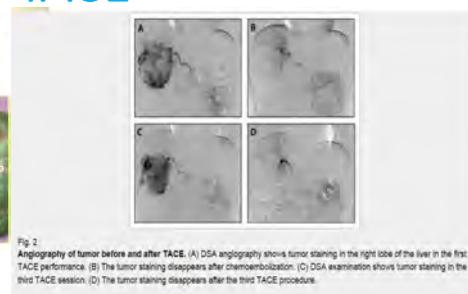

- INDIKACIJE
  - Tumorji, ki niso primerni za druge ablativne metode
- KONTRAINDIKACIJE
  - Obsežne metastaze v jetrih
  - Encefalopatija
  - Obsežna ekstrahepatična bolezen
- RELATIVNE KONTRAINDIKACIJE
  - Tromboza vene porte
  - Jetrna ali ledvična okvara
  - Koagulopatija
  - AV shunti
- ZAPLETI
  - Postembolizacijski sindrom: bolečina, hipertenzija, slabost, bruhanje,  
↑ WBC,
  - Netarčna embolizacija (AV shunti, flow related)
  - Reakcije na KS
  - Poškodba žil

## TAE/cTACE/DEB-TACE

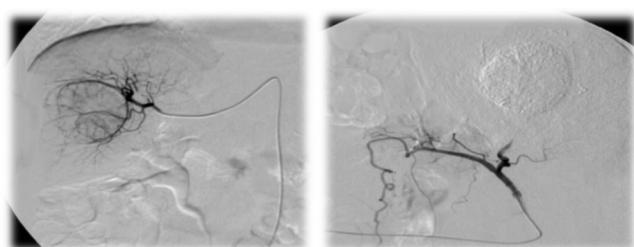

SIR-Sphere size is small enough to gain entry into tumor nodules but too large to pass through the end capillary bed into the venous circulation

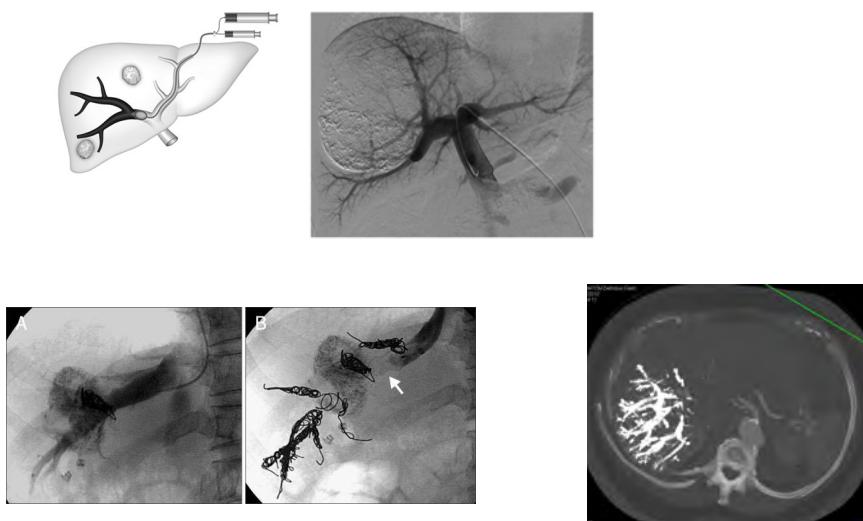

Tumor vessels 25µm - 75µm  
End arterioles 8 µm  
SIR-Spheres mean diameter 35 µm

## Limitations of adjuvant treatment

- Approximately 20% of patients with PC are candidates for surgery at diagnosis
- R0 resection rates for resectable PC is 50–70%
- This percentage is lower in borderline disease
- Administration of planned adjuvant chemotherapy may be limited by post-operative complications and early relapse
- It is reported that between 25-50% of patients received no post-operative chemotherapy

Versteijne et al, BJS 2018;  
Ducreuz et al, Ann Oncol 2015.

## Adjuvant therapy

### R0 resection

- Gemcitabin + capecitabine - PS (2)
- mFOLFIRINOX - PS (0-1)

### R1 resection

- RT+ChT
- mFOLFIRINOX - PS (0-1)

## Adjuvant therapy

- Results of numerous randomized trials and meta-analysis: survival is prolonged if patients are resected after R0 and additionally treated with adjuvant Cht

## Objectives of neo-adjuvant treatment

- Increase the rate of R0 resections
- Increase OS in these patients
- Early treatment of micrometastatic disease
- May reduce unnecessary surgical resection in patients with aggressive disease that develop early recurrence

However...

- Tumour tissue is needed before treatment; this can be difficult
- Biliary drainage with a metal stent may be needed

OS, overall survival.

## Neoadjuvant treatment

- Data on neoadjuvant therapy are limited
- Schemes vary: most recommended
  - m- FOLFIRINOX
  - gemcitabine + nab-paclitaxel

### FOLFIRINOX versus gemcitabine/nab-paclitaxel for neoadjuvant treatment of resectable and borderline resectable pancreatic adenocarcinoma:

- In a propensity matched analysis of 166 patients using the same preoperative variables, the average treatment effect of FOLFIRINOX was to increase OS by 4.9 months above G-nP ( $P=0.012$ ).
- Conclusions: FOLFIRINOX and Gem Abraxane are viable options for neoadjuvant treatment of PDA. In this study, FOLFIRINOX was associated with a 4.9 month improvement in OS when compared to G-nP in the neoadjuvant setting after adjusting for covariates.

Dhir M, Zenati MS, Hamad A, et al: FOLFIRINOX versus gemcitabine/nab-paclitaxel for neoadjuvant treatment of resectable and borderline resectable pancreatic adenocarcinoma: A propensity matched analysis. 2018 Society of Surgical Oncology Annual Cancer Symposium.  
[Abstract 7. Presented March 23, 2018.](#)

- We do not have data from many randomised phase III trials
- Most studies reported an incremental change in the rate of R0 resections with neo-adjuvant treatment
- However, most studies were with old or less effective chemotherapy
- Available data for active, modern regimens come from single-centre trials

## What is the best treatment option?

### Neo-adjuvant versus Adjuvant – chemoradiation (CRT)

N=110 BRPC planned, N=57 BRPC enrolled, Primary endpoint: 2-year survival

	Neoadjuvant CRT	Adjuvant CRT	
2-year survival – ITT	40%	26%	P=0.004
Median OS (months) - ITT	21	12	HR 1.97; P=0.028
R0 resection rate - ITT	51%	26%	P=0.004
R0 resection rate - resected	82%	33%	P=0.010
Positive lymph nodes	0.5±0.9	1.9±1.6	P=0.004

Jang J-Y, et al. Annals of Surgery 2018.

## **Neoadjuvant therapy utilization for pancreatic cancer among high volume surgical centers: Is it a marker of quality?**

- Of 20,119 patients undergoing resection at 107 high volume centers, 2,952 (14.7%) received neoadjuvant therapy.
- These five hospitals had the longest median OS at 28.9 months, compared to 21.1 months for low neoadjuvant utilizers ( $p<0.0001$ ). R0 resection occurred more frequently at high neoadjuvant centers (86% vs 77% at low neoadjuvant centers,  $p<0.0001$ ).

Fisher A, Abbott D, Campbell-Rohr S, et al: Neoadjuvant therapy utilization for pancreatic cancer among high volume surgical centers: Is it a marker of quality? 2018 Society of Surgical Oncology Annual Cancer Symposium, Abstract 59. Presented March 23, 2018.

## Overall Survival (ITT)

- Overall survival**  
NAC-GS: **36.72 months (28.68 – 43.32)**  
Up-S: **26.65 months (21.00 – 31.32)**  
HR: 0.72 (95%CI: 0.55– 0.94)  
stratified log-rank test: p=0.015
- 2-year OS**  
– **63.7% vs 52.5%**

PRESENTED AT: 2019 Gastrointestinal Cancers Symposium | #GI19  
Slides are property of the author. Permission required for reuse.

Presented By Michiaki Unno at 2019 Gastrointestinal Cancer Symposium

## Summary

- The median OS was 36.72 months in NAC-GS group as compared with 26.65 months in Up-S group (HR for death, 0.72, 95%CI 0.55-0.94, p=0.015).
- Grade 3 or 4 adverse events frequently (72.8%) observed in NAC-GS were leukopenia or neutropenia. However, NAC-GS was safe and feasible.
- Lymph node metastasis was significantly decreased in NAC-GS group (59.6% vs 81.5%)

Presented By Michiaki Unno at 2019 Gastrointestinal Cancer Symposium

## How do we define borderline resectable PC?

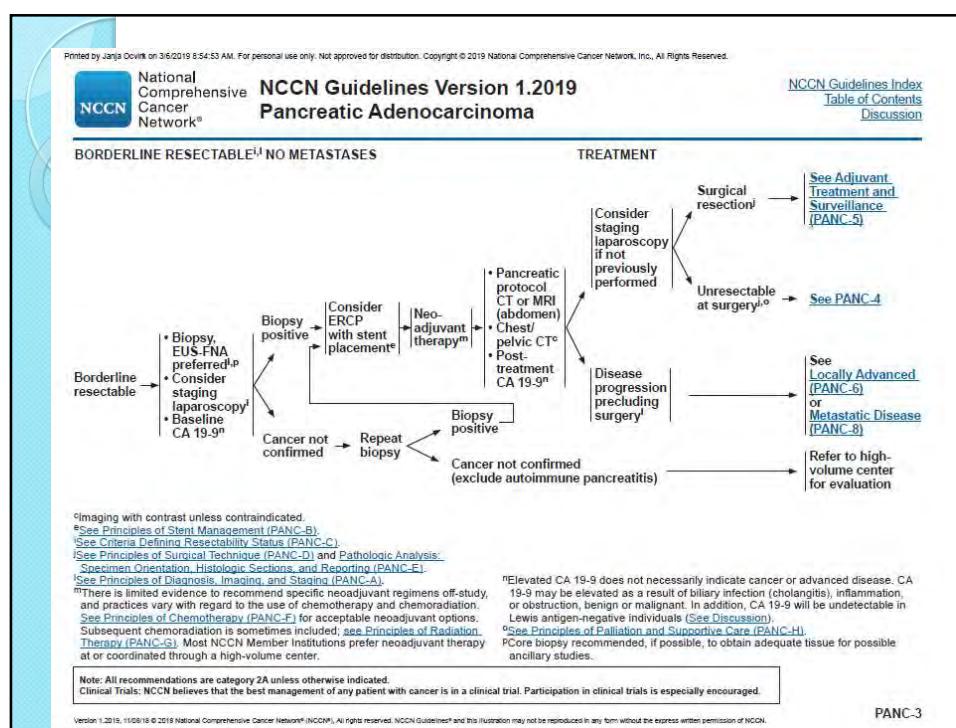

- A multidisciplinary team is required for definition of borderline resectable pancreatic cancer
- Borderline resectable lesions can be defined as those where there is a high likelihood of an incomplete resection

National Comprehensive Cancer Network (NCCN) Guidelines, Version 3.2017 Pancreatic Adenocarcinoma.  
[www.nccn.org/professionals/physician\\_gls/pdf/pancreatic.pdf](http://www.nccn.org/professionals/physician_gls/pdf/pancreatic.pdf). Accessed 28 September 2017.

# Borderline resectable

## Neoadjuvant treatment

- mFOLFIRINOX
- (Gemcitabine based ChT)
- RT+ChT

## Conclusions

---

- Pancreatic cancer surgery requires an experienced team and high-volume centres
- Adjuvant treatment is still the standard, although neo-adjuvant treatment has a good rationale
- Adjuvant treatment in super-fit patients: mFOLFIRINOX, in remaining patients gemcitabine (+/- CPC in R0) can be considered
- Patients have to be discussed in multidisciplinary groups.
- Neo-adjuvant treatment is preferred, with active chemotherapy treatments

# Pancreatic resections for adenocarcinoma of the pancreas

-Results from Maribor-

Stojan Potrč, Matjaž Horvat, Arpad Ivanecz, Tomaž Jagrič, Urška Marolt, Vid Pivec, Bojan Ilijevac

Surgical Clinic, UCC Maribor Slovenia

## Standard surgical treatment for adenocarcinoma of the pancreas

### Incidence almost equals mortality

#### Presently the standard treatment:

- Radical R0 resection +/- Administration of adjuvant chemotherapy  
→ 5-year survival: 7-25% (*median of 15 - 20 mo*)

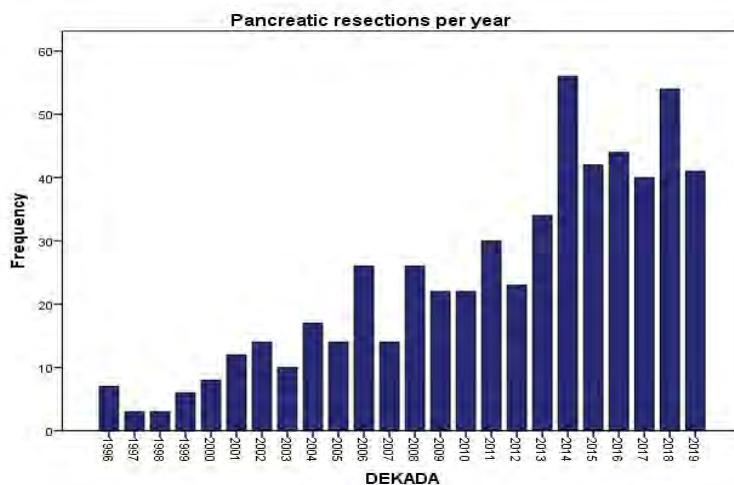

#### How many pts amenable for resection?

- EU and USA (*from the reports*) → 15 - 20% resectable

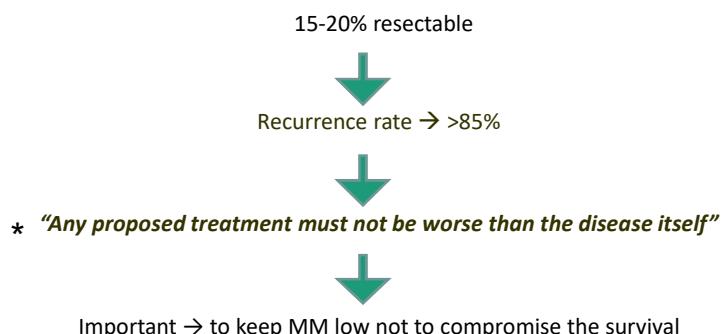

#### Cancer Registry of SLO 2015:

- Incidence 18/100.000 → 370/Y
- If 20% resectable → 70-80 resections for ACP/Y

### Annual incidence of pancreatectomies UKC MB (1997- 2018)

### Problems in treatment of pancreatic cancer

\* Rosenberg L et al. Treatment of pancreatic cancer. Int J of Pan. V 22;Oct 1997

## **Outcome of pancreatectomies for adenocarcinoma of the pancreas**

*UMC MB: January 1, 2000 - June 31, 2017*

- Prospective stored E-database → altogether 568 pancreatic resections,
- Analyzed 223 patients resected for pancreas adenocarcinoma January 1<sup>st</sup>, 2000 to June 31<sup>st</sup>, 2017, 2 ASA 4 excluded,
- Median follow-up 21 months,
- The follow-up was obtained by our own outpatient follow-up and by the National Cancer Registry of Slovenia.
- Aim: incidence of M&M, impact factors for M&M, survival, to compare two chronologically successive groups of patients (P1: 2000-2009; P2: 2010-2017) in this issue.

## **Factors studied for correlations with M&M and survival**

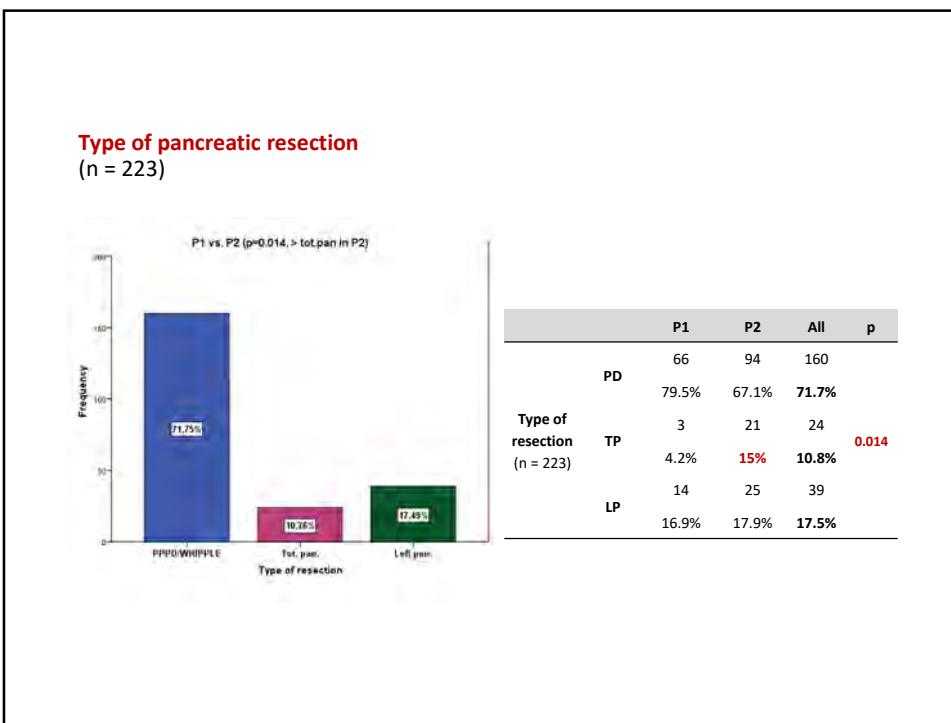

- Age, Age < & > 70 year
- General performance (ASA 1, 2, 3)
- CEA, Ca 19-9
- Preop. Bilirubin level
- EBD - Y/N
- Amylase on drains > 7ukat/l
- Size of tumour
- Type of resection (Total Vs. PD Vs. LP)
- Resection of the VP/VMS - Y/N
- Period of the study (P1 Vs. P2)

**Demographic data:**  
(n=223)

		P1	P2	All	p
<b>Gender</b> (n = 223)	Male	42 (50.6%)	70 (50%)	112 (50.2%)	0.521
	Female	41 (49.4%)	70 (50%)	111 (49.8%)	
<b>Age</b> (n = 223)	Mean (years)	64.04 ± 9.6	65.61 ± 9.2	65.03 ± 9.4	0.227

### 30 and 90-day mortality

Incidence (all, n=223)

Resection for pancreatic adenocarcinoma (n=223)	P1	P2	p
30-day mortality	6%	<b>2.1%</b>	0.129
90-day mortality	12%	<b>4.3%</b>	<b>0.016</b>

### Correlations for 30 and 90-day mortality – all resections

X<sup>2</sup> (all, n = 223)

Variable	30-day mortality	p	90-day mortality	p
ASA 3 vs. 1 and 2	10.2% vs. 1.7%	0.034	20.2% vs. 3.9%	0.001
CD > 1	12% vs. 0%	0.001	19% vs. 2%	< 0.0001
CD > IIIa	20% vs. 0%	0.0001	34.3% vs. 0.8%	< 0.0001

Binary Regression (all, n = 223)

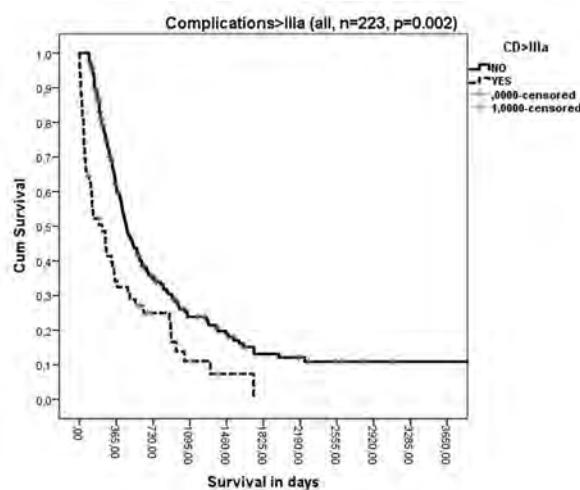

Variable	Mortality	HR	95% CI	p
ASA 3 ( <u>independant predictor</u> )	30-day mortality	6.221	1.400 – 27.533	0.016
	90-day mortality	5.917	1.495 – 23.419	0.011
CD > IIIa ( <u>independant predictor</u> )	90-day mortality	90.500	10.564 – 775.286	< 0.0001

### Correlations for 30 and 90-day mortality - PPPD/PRPD

Binary Regression (PD, n = 160)

Variable	Mortality	HR	95% CI	p
PF C	30-day mortality	32.727	3.134 – 341.755	0.004
ASA 3	90-day mortality	8.451	1.882 – 37.945	0.005
CD > IIIa	90-day mortality	90.500	10.564 – 775.286	< 0.0001

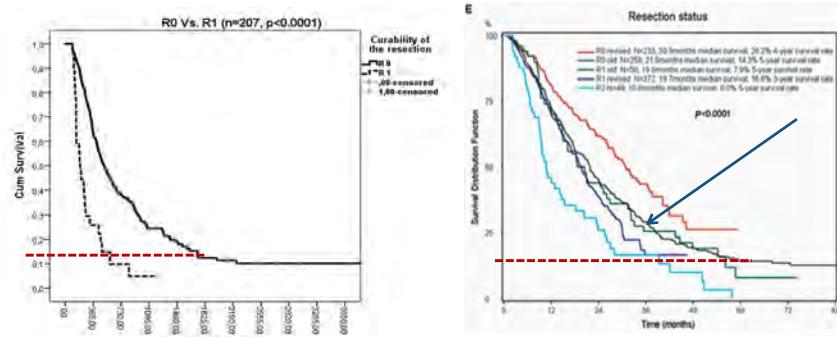

### Impact of complications CD > IIIa on survival

### Curability of the resection:

R0 vs. R1 (all, n = 223)

	P1	P2	All	p
R0 resection (n = 223)	73	125	194 <b>88.8%</b>	0.806

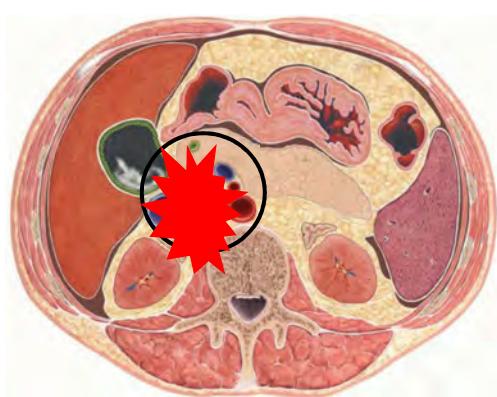

16.7 vs. 6.5 months, Log Rank < 0.0001

Oliver Strubel, MD,\* Markus W. Büchler, MD,\* and Jens Werner, MD\*

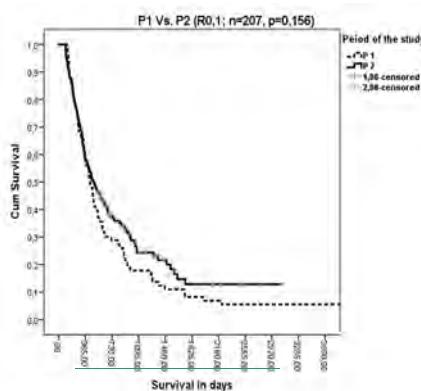

### Survival → critical points in pancreatic resection Problem of growth through dorsal pan. capsule: → R1

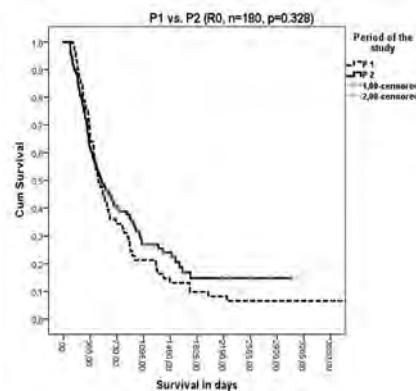

<b>R1</b>	25 pts (11.2%)	„Dorsal“ R1	19/25 (8.5%)
-----------	----------------	-------------	--------------

## Survival

P1 vs. P2 (all R, n = 207; R0, n = 180)

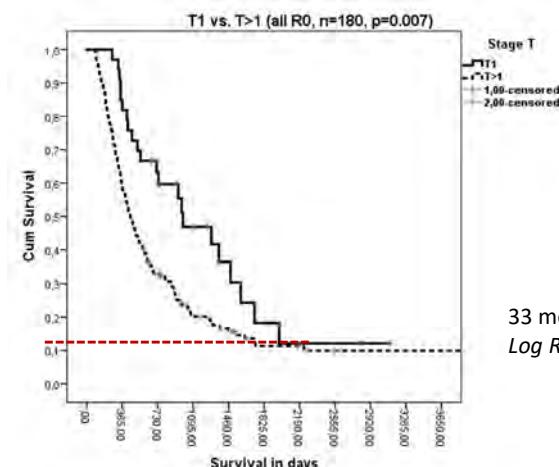

14.2 months (P1) vs. 15.7 months (P2)  
Log Rank = 0.16

16 months (P1) vs. 17.4 months (P2)  
Log Rank = 0.328

## Survival

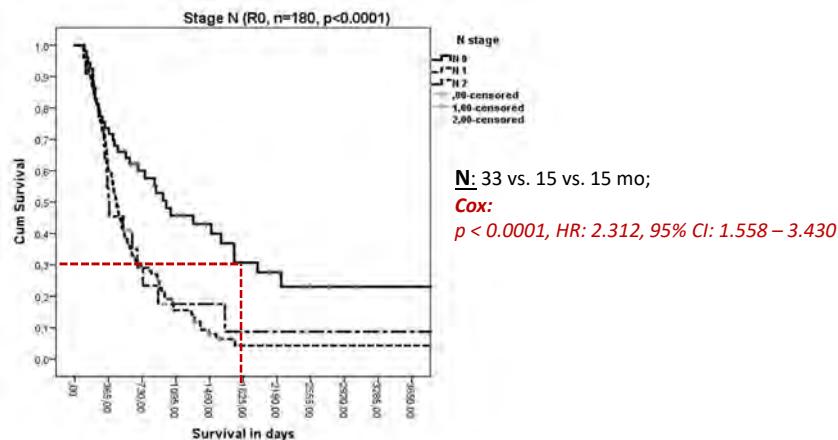

T stage 1 vs. T > 1 (all R0, n = 180)

33 months (T1) vs. 15 months (T>2)  
Log Rank = 0.007

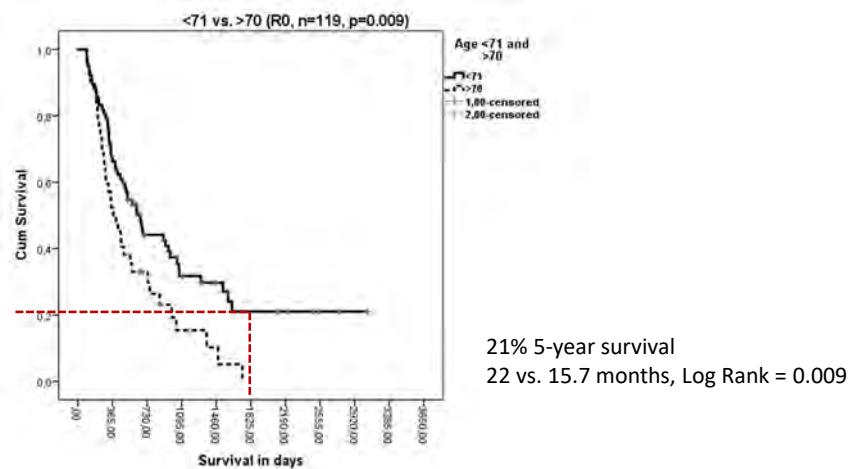

### Survival Cox regression

N stage (all R0, n = 180)

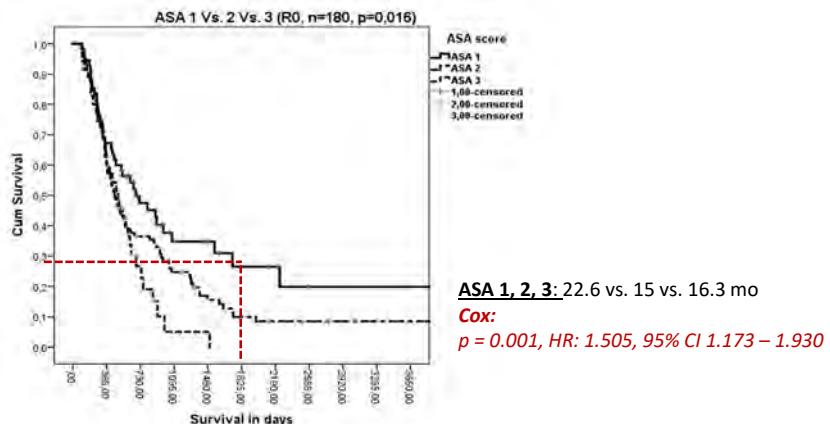

### Survival: < 71 vs. >70

(P2, R0, n = 119)

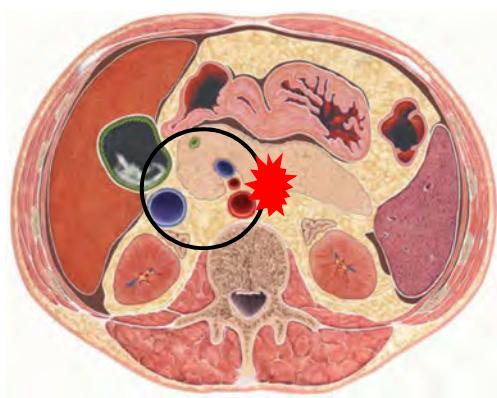

### Survival Cox regression

ASA and N stage (all R0, n = 180)

### Survival → critical points in pancreatic resection

Infiltration of arteries CHA, SMA, COELIAC TRUNC

## Curability of the resection and long term survival

**Definitions: resectable, borderline resectable, locally advanced (Katz)**

	SMV/PV	SMA	CHA	CT
<b>Resectable</b>	< 180°, no occlusion	No contact	No contact	No contact
<b>Borderline</b>	> 180°, without/with occlusion	< 180°	Reconstructable	< 180°
<b>Locally advanced</b>	180°, technically not amenable for resection	> 180°	Not reconstructable	> 180°

**Box 2 | Anatomical resectability criteria<sup>11</sup>**

**Resectable**  
 • SMV/PV: no tumour contact or unilateral narrowing  
 • SMA, CA and CHA: no tumour contact

**Borderline resectable**  
 Subtotally resectable due to SMV/PV involvement alone or arterial involvement  
 + PR-PV (SMV/PV alone)  
 + SMV/PV tumour contact ≥ 180° or bilateral narrowing and/or occlusion not exceeding the inferior border of the duodenum  
 – SMA, CA and CHA: no tumour contact

+ PR-A (arterial involvement)  
 Subtotally resectable due to tumour contact of < 180° without deformity and/or stenosis  
 – CHA: tumour contact without showing tumour contact of the PHA and/or CA

**Unresectable**  
 Subclassified according to the status of distant metastasis

**Locally advanced**  
 + SMV/PV: bilateral narrowing and/or occlusion, exceeding the inferior border of the duodenum  
 • SMA and CA: tumour contact ≥ 180°  
 • CHA: tumour contact extending to PHA and/or CA

• Aorta: tumour contact or invasion of the aorta

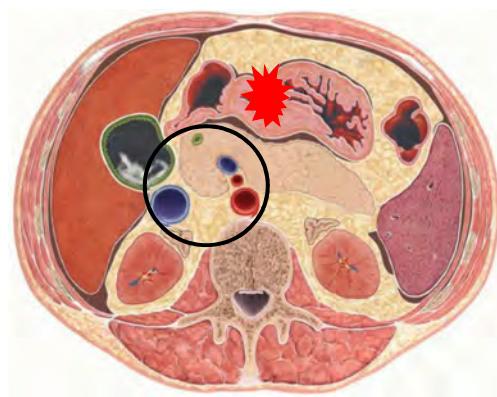

**Metastatic**  
 Distant metastasis (including para-aortic and retro-abdominal lymph node metastasis)  
 CA: common artery; CHA: common hepatic artery; PHA: proper hepatic artery; PV: portal vein;  
 SMA: superior mesenteric artery; MN: mesenteric venous vein. Adapted with permission from  
 BCLC Disease

### Optimizing the outcomes of pancreatic cancer surgery

Oliver Strüber<sup>1</sup>, John Ngopogounou<sup>2</sup>, Dire Alper<sup>3</sup> and Markus W. Büchler<sup>1,2</sup>

## Survival → critical points in pancreatic resection

Infiltration of SMV

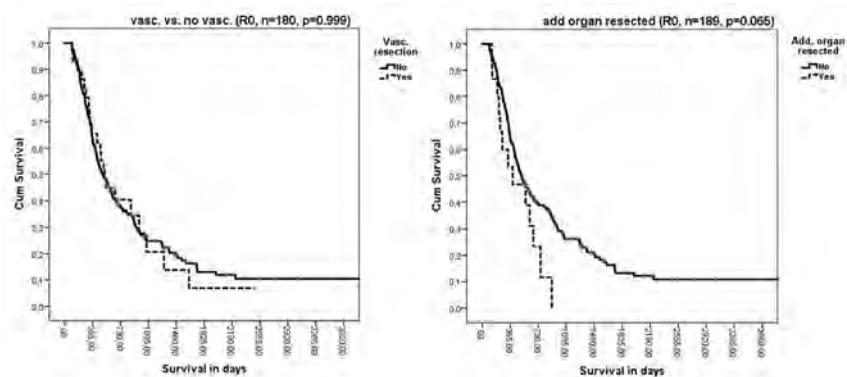

**To provide R0 if infiltration of VMS suspected:**

(all, n = 223)

	P1	P2	All	p
<b>Resection of VMS/VP/CHA(2) (n=223)</b>	10 (12%)	35 (25%)	45 (20.2%)	<b>0.014</b>
<b>Type of vascular reconstruction</b>	9 (10.8%)	21 (15%)	30 (13.5%)	
- Direct suture	1 (1.2%)	<b>14 (10%)</b>	<b>15 (6.7%)</b>	<b>0.009</b>
- Interposition vascular graft				
<b>Resection of other organ</b>	7 (8.4%)	13 (9.3%)	20 (9%)	0.518

**Survival: vascular res. and res. of add. Organs**

(R0, n = 180)

**Meta-analysis comparing upfront surgery with neoadjuvant treatment in patients with resectable or borderline resectable pancreatic cancer**

# VLOGA RADIOTERAPIJE PRI RAKU TREBUŠNE SLINAVKE

Izr.prof.dr.Irena Oblak, dr.med.

## KARCINOM TREBUŠNE SLINAVKE

- ▶ Incidenca narašča;
- ▶ Prognoza bolnikov se zadnjih 20 let ni bistveno spremenila;
- ▶ Le slabih 5% bolnikov vključenih v raziskave;
- ▶ 15-20% bolnikov ima ob DG omejeno obliko raka, resekabilno bolezen;
- ▶ 30-40% bolnikov ima ob DG lokalno napredovalo bolezen in 40% oddaljene zasevke;
- ▶ Po OP se bolezen ponovi lokalno v 50-80%, z oddaljenimi zasevkami v 75%;
- ▶ 5-letno preživetje <5% , po R0 OP 20%.

## Vloga RT pri raku trebušne slinavke

- ▶ Adjuvantno zdravljenje
- ▶ Neoadjuvantno zdravljenje
- ▶ Definitivna RT pri lokalno napredovalem raku
- ▶ Ponovitev bolezni
- ▶ Paliativno zdravljenje

## Resekabilna bolezen

- ▶ M0;
- ▶ Ne vrašča v druge organe;
- ▶ Ni vraščanja v pomembne arterije, vene;
- ▶ <50% obraščanje AMS,...

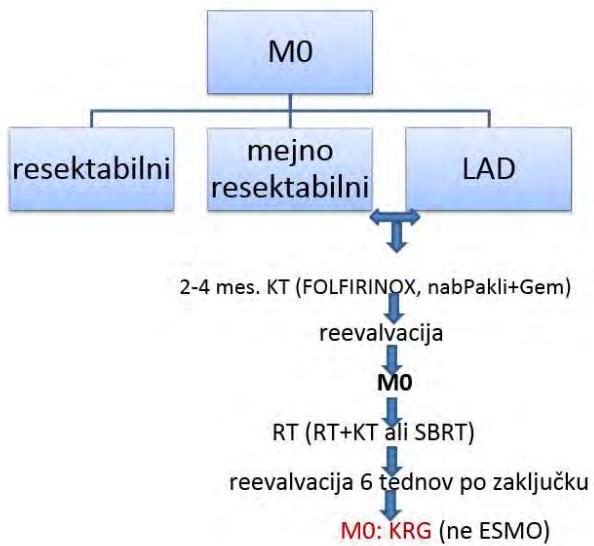

## Mejno resektabila bolezen

- ▶ Opredelitev je odvisna od kirurga;
- ▶ Visoko rizični za okultne M+;
- ▶ R0?;
- ▶ Pogosto potrebne obsežne OP z vaskularnimi resekcijami in različne rekonstrukcije;
- ▶ Potreba po neoadjuvantnem zdravljenju

## ALGORITEM ZDRAVLJENJA RAKA TREBUŠNE SLINAVKE BREZ ODDALJENIH ZASEVKOV (ASCO, NCCN, ESMO)-1

## ALGORITEM ZDRAVLJENJA RAKA TREBUŠNE SLINAVKE BREZ ODDALJENIH ZASEVKOV (ASCO, NCCN, ESMO)-1

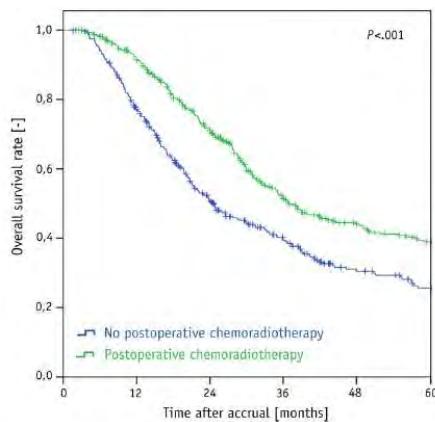

## VLOGA RT V SKLOPU ADJUVANTNEGA ZDRAVLJENJA

- ▶ Kontradiktorni izsledki raziskav;
- ▶ Korist adjuvantne RT?;
- ▶ Pri izbranih bolnikih po R+ resekciji ali N+ = ↑rizični za LR

1. Morganti AG, Falconi M, et al. Multi-institutional pooled analysis on adjuvant chemoradiation in pancreatic cancer. *Int J Radiat Oncol Biol Phys* 2014;
2. Kooby DA, Gilespie TW, et al. Impact od adjuvant radiotherapy on survival after pancreatic cancer resection: an appraisal of data from the national cancer data base. *Ann Surg Oncol* 2013; 20: 3634-42.
3. RTOG trial 0848 še teče- zaključena 2020

## Adjuvantna RT+KT

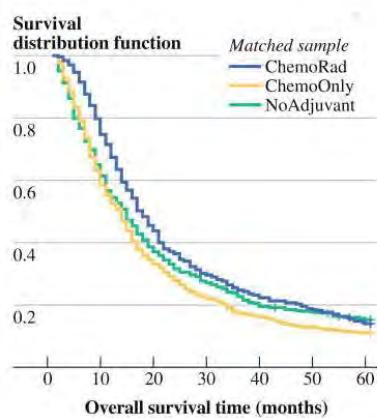

- ▶ 1995-2008: 1.120 bolnikov po OP;

Morganti AG, Falconi M, et al. Multi-institutional pooled analysis on adjuvant chemoradiation in pancreatic cancer. *Int J Radiat Oncol Biol Phys* 2014;

## Adjuvantna RT+KT

- ▶ 1982-2002: 11.526 bolnikov po OP;
- ▶ RT mora biti del adjuvantnega zdravljjenja

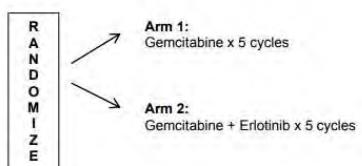

Kooby DA, Gilespie TW, et al. Impact of adjuvant radiotherapy on survival after pancreatic cancer resection: an appraisal of data from the national cancer data base. *Ann Surg Oncol* 2013

## Adjuvantno zdravljenje z RT

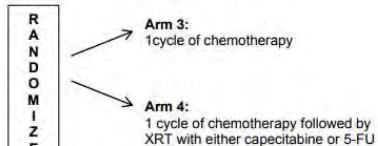

- ▶ 1000 bolnikov po OP glave trebušne slinavke;
- ▶ Rezultati 2020

### FIRST RANDOMIZATION

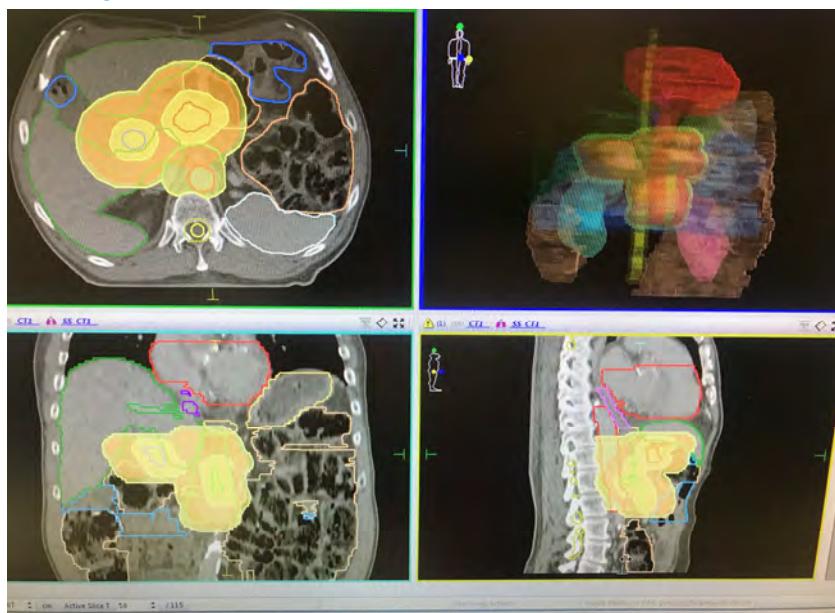

Evaluate to Confirm No Progression

### SECOND RANDOMIZATION For Non-Progressing Patients

RTOG trial 0848

## Primer poOP RT

## Namen neoadjuvantnega zdravljenja

- ▶ ↑ selekcija bolnikov, ki jim OP ne bi koristila in nudila ↑ preživetja (hitro v progres z M+ med predOP zdravljenjem);
- ▶ ↑ R0 resekciј;
- ▶ Zgodnje TH mikro-zasevkov.

## Neoadjuvantno zdravljenje

- ▶ Pred tem nujna patohistološka potrditev bolezni;
- ▶ Določitev Ca 19-9 pred TH in če povišan: na 1-3 mes. med TH
- ▶ ?dolžina, vrsta neoadjuvantnega zdravljenja;
- ▶ ? Opredeliti odgovor na predOP zdravljenje

## Ocena odgovora na neoadjuvantno TH RECIST kriteriji ne sovpadajo z odgovorom!

- ▶ Predvsem ne za RT;
- ▶ MRI?, PETCT ?

*Katz MH, et al. Response of borderline resectable pancreatic cancer to neoadjuvant therapy is not reflected by radiographic indicators. Cancer 2012; 118:5749.*

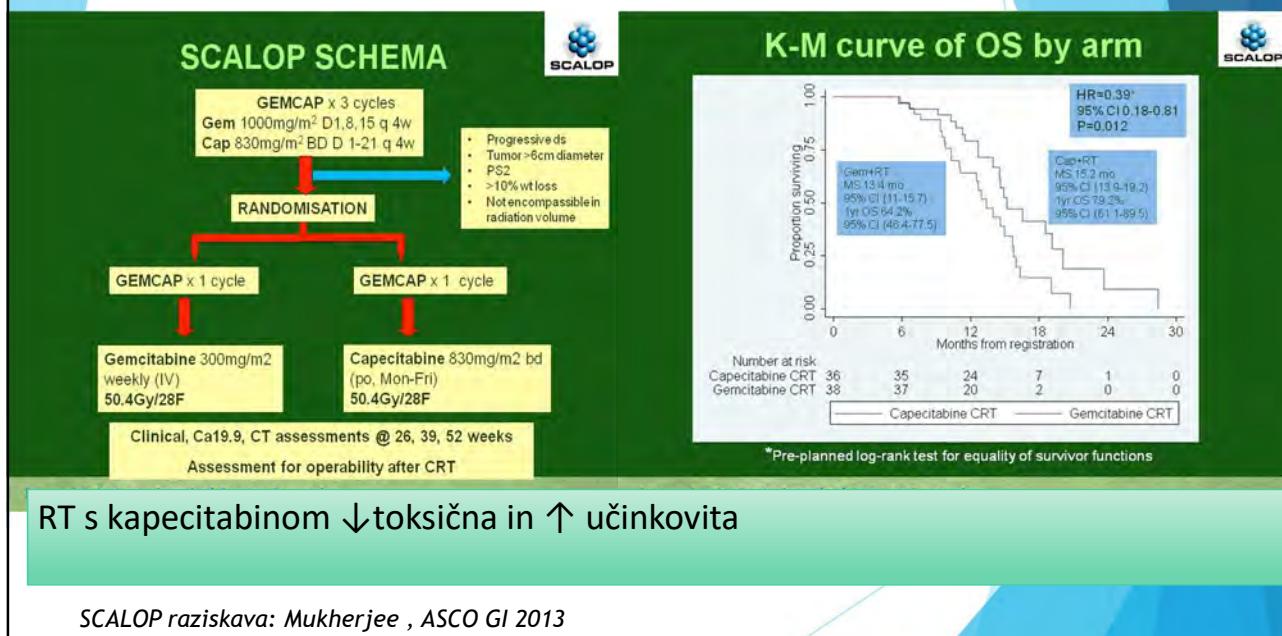

## VLOGA RT V SKLOPU NEOADJUVANTNEGA ZDRAVLJENJA PRI MEJNO RESEKTABILNIH TU

4-6 mesecev KT —> RT+KT (derivati 5-FU) (Scalop trial) ali SBRT

- ▶ Poveča verjetnost R0 resekcije;
- ▶ VMAT > 3-D konformalna RT (50,4 Gy v 28 fr): boljša D distribucija, eskaliranje D, ↓ SE;
- ▶ GTV +1 cm, ABC sistem;
- ▶ SBRT 25-30 Gy v 5-6 frakcijah (↓OTT-manj prekinitve sistemske TH).

*Katz MH, Crane CH, et al. Management of borderline resectable pancreatic cancer. Semin Radiat Oncol 2014*

## Ob RT derivati 5-FU > Gemcitabin

## VLOGA RT V SKLOPU DEFINITIVNEGA ZDRAVLJENJA PRI LOKALNO NAPREDOVALIH TU

- Ni konsenza glede optimalnega zdravljenja;
- KT+RT > KT (ne velja ob FOLFIRINOX-u);
- Odloži lokalni progres, ni ↑OS;
- Predvsem za bolnike, kjer ni možno, da postanejo OP.

a). 4-6 mesecev KT → RT+KT ali SBRT- če MO

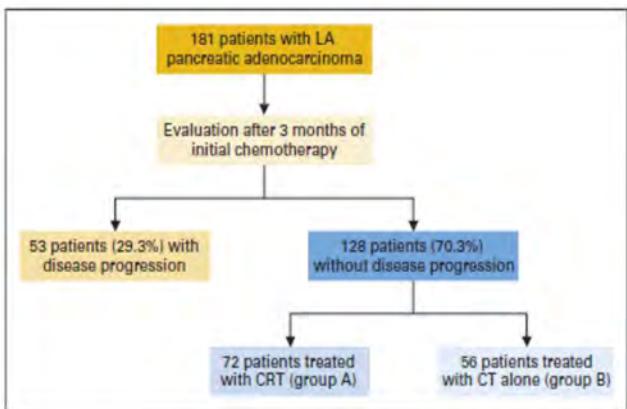

b). Če ni kandidat za KT: RT+KT ali SBRT- če MO

1.Tempero MA, Malafa MP, et al. Pancreatic adenocarcinoma, version 2.2014: featured updates to the NCCN guidelines J Natl Compr Canc Netw. 2014;12:1083-1093.

- d. 3% KT+SBRT

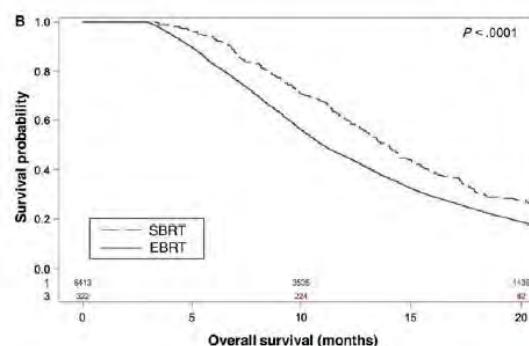

De Geus SWL, Eskander MF, et al. Stereotactic Body Radiotherapy for Unresected Pancreatic Cancer: A Nationwide Review. *Cancer* 2017

## RT pri lokalno napredovalem raku trebušne slinavke

14.331 bolnikov:

- a. 38 %KT,
- b. 44% KT+3-D RT,
- c. 15% KT+IMRT,
- d. 3% KT+SBRT

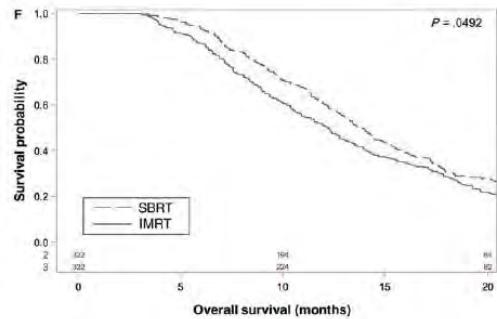

De Geus SWL, Eskander MF, et al. Stereotactic Body Radiotherapy for Unresected Pancreatic Cancer: A Nationwide Review. *Cancer* 2017

## VLOGA RT V SKLOPU ZDRAVLJENJA LOKALNE PONOVITVE BOLEZNI ALI V SKLOPU „SECOND LINE“ ZDRAVLJENJA

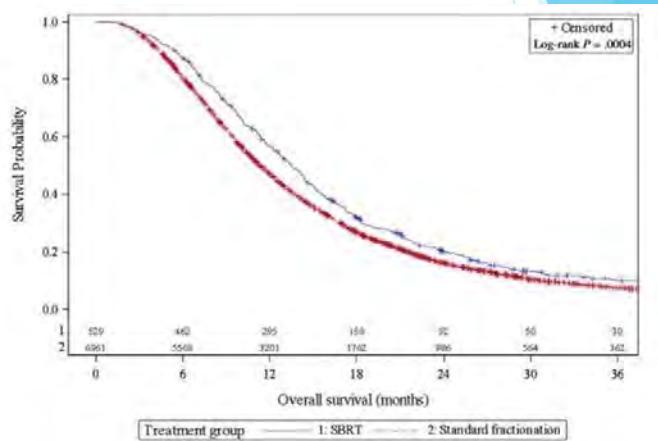

- a). RT+/- KT
- b). SBRT

## VLOGA RT V SKLOPU PALIATIVNEGA ZDRAVLJENJA

- ▶ Protibolečinsko
- ▶ Hemostiptično
- ▶ Zmanjšanje obstrukcije,...

## SBRT

- ▶ SBRT > konvencionalno RT: ↑ mediano S in OS<sub>2</sub> (21.7% vs 16.5%)

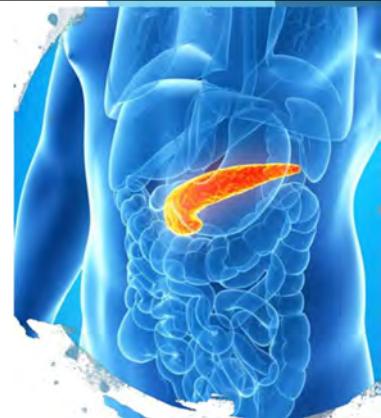

Zhong J, Patel K, et al. Outcomes for Patients With Locally Advanced Pancreatic Adenocarcinoma Treated With Stereotactic Body Radiation Therapy Versus Conventionally Fractionated Radiation 2017

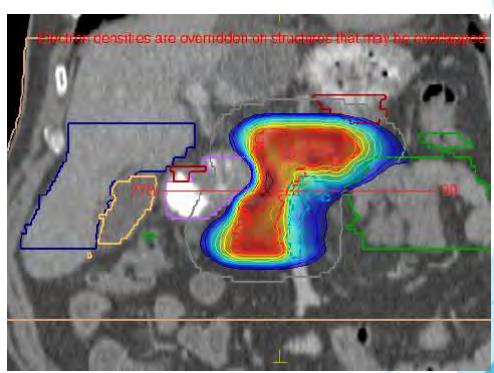

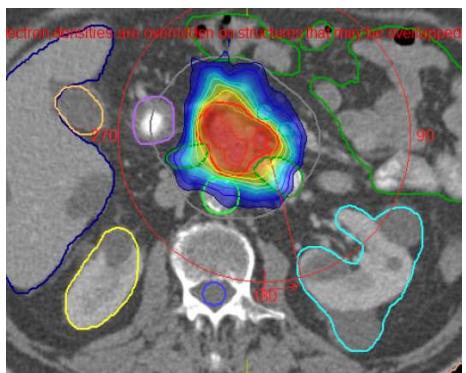

## SBRT

### Indikacije:

- ▶ Patohistološka verifikacija;
- ▶ Velikost lezije <5 cm;
- ▶ M0;
- ▶ PS 0-2 po WHO
- ▶ >2 mm stran od želodca ali dvanajstnika;
- ▶ V okviru neoadjuvantnega zdravljenja (KT);

## Primer bolnika

Atene, november 2018

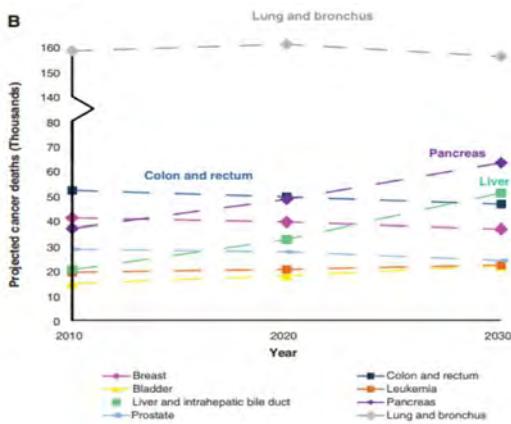

## VLOGA SISTEMSKE TERAPIJE PRI NAPREDOVALEM KARCINOMU TREBUŠNE SLINAVKE

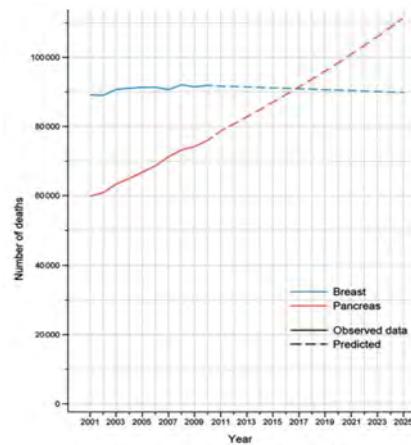

asist. mag. Zvezdana Hlebanja, dr.med.  
specialistka internistične onkologije

### RAK TREBUŠNE SLINAVKE

- ❖ Zahrbten, pozno odkrit, hitro potekajoč, smrten

Rahib L, et al. *Cancer Res.* 2014;74(11):2913-2921.

Ferlay J, et al. *Acta Oncol.* 2016;55(9-10):1158-1160.

## ZAHRTEN, POZNO ODKRIT, HITRO POTEKAJOČ, SMRTEN...

## RAK TREBUŠNE SLINAVKE

- ❖ V Sloveniji zboli cca 400 bolnikov letno (žensk več kot moških)
- ❖ Zdravljenje zahteva multidisciplinarni pristop
- ❖ Edino kurativno zdravljenje je kirurško (15-20 %)
- ❖ 5-letno preživetje manj kot 10 %
- ❖ Večinoma je zdravljenje paliativno (54 % bolnikov odkritih v napredovalem stadiju - 5-letno preživetje <2 %)
- ❖ Za določitev stadija bolezni CT prsnega koša in trebuha
- ❖ Pred uvedbo zdravljenja določitev tumorskega markerja CA19-9
- ❖ Histološka verifikacija (ni vedno potrebna)

# SISTEMSKO ZDRAVLJENJE NAPREDOVALEGA RAKA TREBUŠNE SLINAVKE

- ❖ 15-20 % operabilnih
- ❖ Ostali lokalno napredovali ali metastatski
- ❖ mOS 8-12 mesecev za lokalno napredovale in samo 3-6 mesecev za metastatske
- ❖ Vrsto citostatskega zdravljenja določajo:
  - PS bolnika
  - Genske značilnosti
  - Molekularne značilnosti
  - Pridružene bolezni
  - Bolnikove preference
  - Predhodni načini zdravljenja

## STANJE ZMOGLJIVOSTI BOLNIKA

Initial questions	Follow-up questions	Symptom characterization	KPS %	Comments	Grade	ECOG
Is the patient able to carry on with his/her normal work or activity?	A Does the patient have symptoms? (pain, loss or gain of weight, reduced energy etc.)	No symptoms.	100	Normal, no complaints, no evidence of disease.	0	Fully active, able to carry on all pre-disease performance without restriction
YES		Mild symptoms.	90	Able to carry on normal activity, minor signs or symptoms of disease.	1	Restricted in physically strenuous activity but ambulatory and able to carry out work of a light or sedentary nature, e.g., light house work, office work
NO		Moderate symptoms.	80	Normal activity with effort, some signs or symptoms of disease.	2	Ambulatory and capable of all selfcare but unable to carry out any work activities. Up and about more than 50% of waking hours
NO	B Does the patient need assistance? (grooming, food intake, dressing, other daily activities)	No assistance.	70	Cares for self, unable to carry on normal activity or to do active work.	3	Capable of only limited selfcare, confined to bed or chair more than 50% of waking hours
is the patient bedridden for more than half a day?		Occasional assistance.	60	Requires occasional assistance, but is able to care for most of his needs.	4	Completely disabled. Cannot carry on any selfcare. Totally confined to bed or chair
YES	C What is the patient's degree of disability in terms of bed confinement?	Considerable assistance.	50	Requires considerable assistance and frequent medical care	5	Dead
		Bedridden in more than 50% of the time..	40	Disabled, requires special care and assistance		
		Almost completely bedridden.	30	Severely disabled, incontinence is indicated although often not imminent.		
		Completely bedridden and dependent upon extensive nursing care by professionals and/or family.	20	Hospitalization necessary, very sick, active supportive treatment necessary.		
		Completely bedridden and comatose or barely arousable..	10	Moribund, fatal processes progressing rapidly.		
		Dead.	0	Dead.		

Karnofsky performance status

Péus et al. BMC Medical Informatics and Decision Making 2013

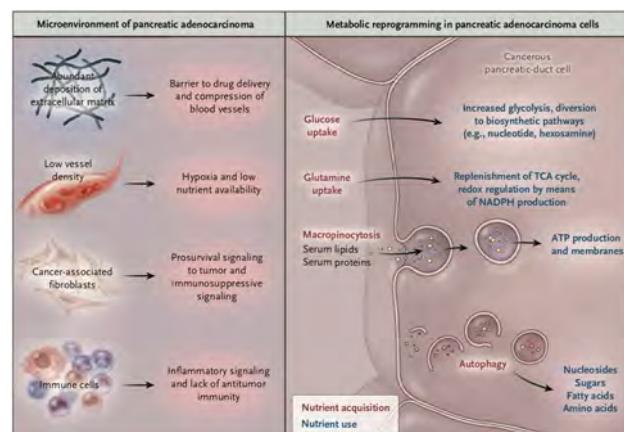

# SISTEMSKO ZDRAVLJENJE NAPREDOVALEGA RAKA TREBUŠNE SLINAVKE

- ❖ Nobena kemoterapija ne ozdravi metastatskega raka trebušne slinavke
- ❖ Njen namen je olajšati simptome bolezni, upočasniti napredovanje bolezni in podaljšati preživetje
- ❖ Pred odločitvijo o vrsti kemoterapije 1. reda najnovejša priporočila svetujejo gensko in molekularno testiranje za vse metastatske bolnike

# GENETSKE SPREMEMBE IN POTENCIALNI BIOMARKERJI ZA RAK TREBUŠNE SLINAVKE

- ❖ **BRCA 1,2, PALB 2**
- ❖ KRAS - Na mutacije KRAS vplivajo **vnetni signali** (morda povezani s prehrano z veliko maščobami)
- ❖ **Mikrokolje tumorja** (fibroblasti, povezani s stromo/rakom)
- ❖ **Mismatch repair deficiency (Lynch syndrome)** napoveduje učinkovitost imunoterapije
- ❖ **Neraziskani/nepoznani biomarkerji za rak trebušne slinavke**

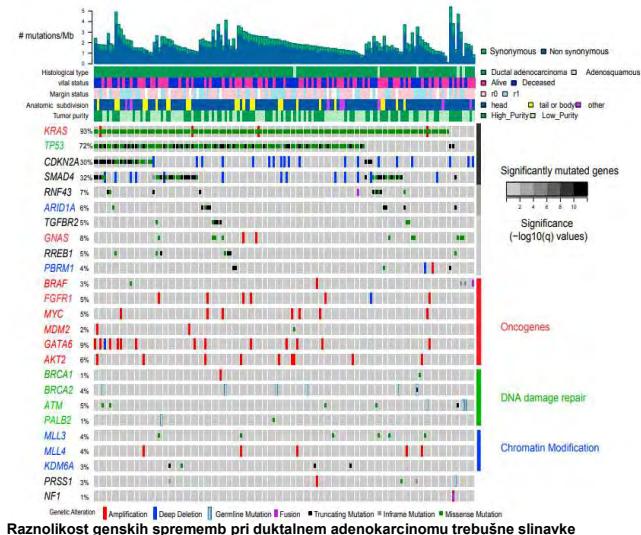

Ryan et al., N Engl J Med 2014; Jones et al., Science 2008; Philip et al., Gastroenterology 2013; Puleo et al., Gastroenterology 2018; Le et al., N Engl J Med 2015; Lee et al., Cancer Discov 2017.

## POGOSTE MUTACIJE PRI RAKU TREBUŠNE SLINAVKE

- ❖ Rak trebušne slinavke je rezultat **velikega števila genskih mutacij**
- ❖ Genske mutacije se združujejo na **omejenem številu poti in procesov**
- ❖ Sestavni deli poti, ki so se v posameznem tumorju spremenili, se zelo razlikujejo

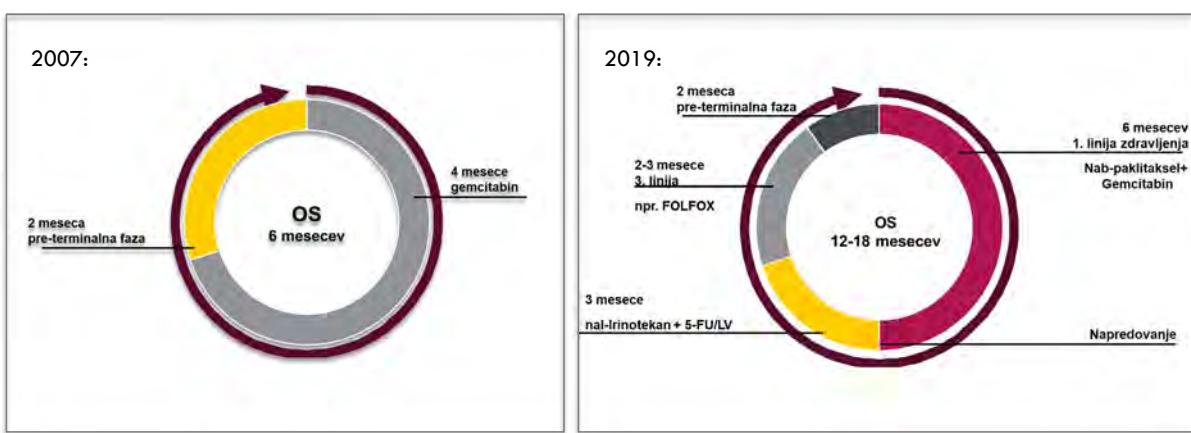

- ❖ Odkrivanje učinkovin, ki delujejo na spremenjene poti in procese, lahko ponudi ključna prijemašča za zdravljenje

Cancer Genome Atlas Research Network. Cancer Cell 2017; 32:185-203.

## PA VENDARLE SE PREMIKA ...

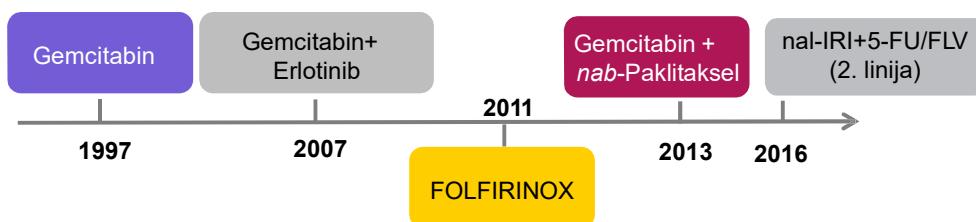

## PA VENDARLE SE PREMIKA ...

- ❖ Prvič v desetletjih se vendorle kaže trend izboljšave preživetja, najverjetneje na račun:
  - Ozaveščenosti o bolezni
  - Napredka v diagnostiki
  - Napredka v načinih adjuvantnega zdravljenja
  - Napredka v izbiri pravih kandidatov za pravo zdravljenje glede na PS
  - Napredka v genskem in molekularnem testiranju
  - Zgodnjega vključevanja v paliativno oskrbo

## MOŽNOSTI ZDRAVLJENJA RAKA TREBUŠNE SLINAVKE V LETU 2019

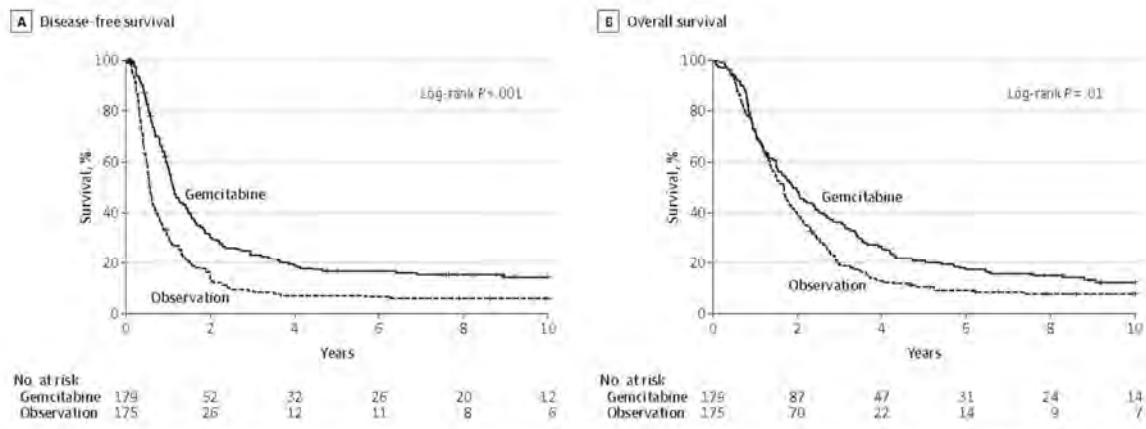

### Paliativno zdravljenje

### Adjuvantno zdravljenje

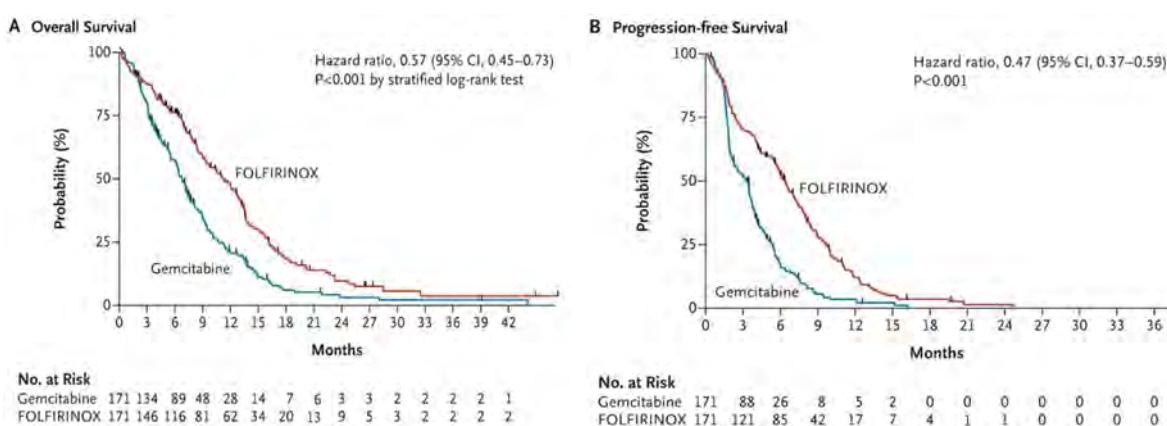

## CONKO - 001

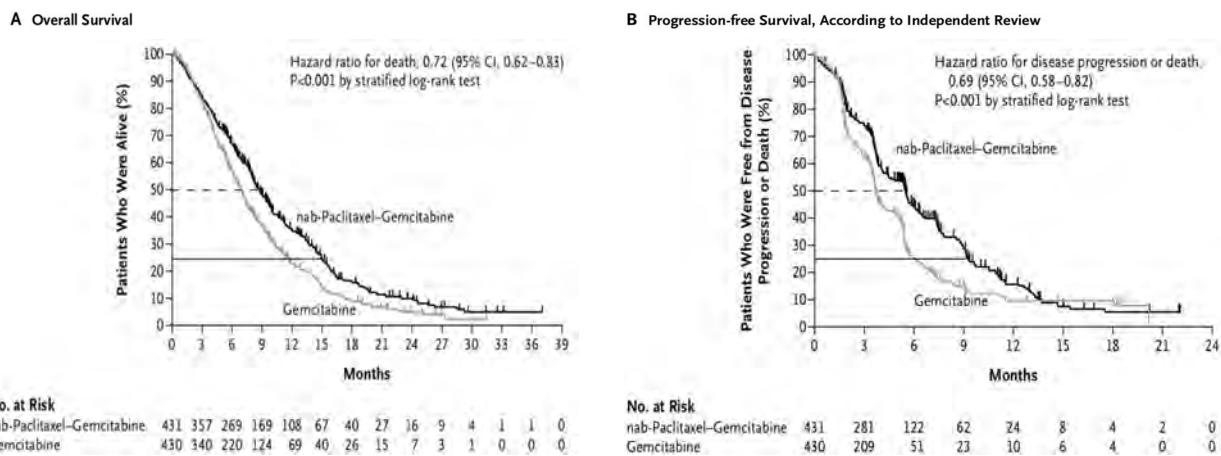

A. Median disease-free survival was 13.4 months (95% CI, 11.6–15.3 months) in the gemcitabine group compared with 6.7 months (95% CI, 6.0–7.5 months) in the observation group (hazard ratio, 0.55 [95% CI, 0.44–0.69]). B. Median

group compared with 20.2 months (95% CI, 17.7–22.8 months) in the observation group (hazard ratio, 0.76 [95% CI, 0.61–0.95]). Vertical lines on curves indicate patients censored on the date of their last follow-up

## ACCORD 11

## ŠTUDIJA MPACT

## ZDRAVLJENJE METASTATSKIE BOLEZNI – I. LINIJA

- ❖ Ločimo zmogljive od nezmogljivih bolnikov
- ❖ Opravimo gensko testiranje in molekularni profil
- ❖ Gensko testiranje – odkrije cca 17 % mutacij, več kot polovica le-teh v genih, ki sodelujejo v popravilu DNA (zato derivati platine!)
- ❖ Molekularno testiranje – odkriva napake v MMR mehanizmih (1 %) in MSI status – ti bolniki so kandidati za zdravljenje z imunoterapijo po I.-linijskem zdravljenju
- ❖ Poleg tega molekularno testiranje lahko odkrije glavno driver mutacijo KRAS in druge mutacije npr. TRK – kandidati za larotrektinib

## ZDRAVLJENJE METASTATSKIE BOLEZNI – I. LINIJA NOSILCI GENSKIH MUTACIJ

- ❖ Gensko testiranje – noslici BRCA 1,2 ali PALB 2
- ❖ Kemoterapevtski protokoli, ki vsebujejo derivate platine:
  - PS 0-1: FOLFIRINOX ali mFOLFIRINOX
  - PS > 1: FOLFOX/XELOX ali GEM/CIS (16 tednov), nato vzdrževalno zdravljenje s PARP inhibitorjem (olaparib)

## ZDRAVLJENJE METASTATSKIE BOLEZNI – I. LINIJA GLEDE NA ZMOGLJIVOST

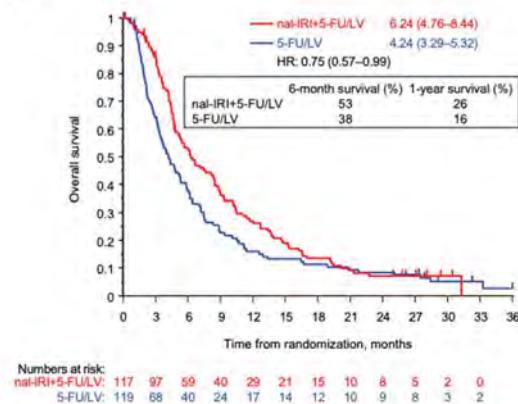

Brez dokazanih/znanih genskih mutacij (duktalni adenokarcinomi)

- **PS 0-1** (brez komorbidnosti, normalne vrednosti bilirubina – manj kot 1,5 x ULN):
  - FOLFIRINOX ali mFOLFIRINOX
  - Gemcitabin/nab-paklitaksel (manj toksičen, približno enako učinkovit)
  - Za bolnike z bilirubinom >1,5 x ULN - FOLFOX
- **PS > 1** (zmerna komorbidnost, bilirubin manj kot 1,5 x ULN) – gemcitabin mono, lahko GEMCAP, S1, kapecitabin
- **PS 2** (zelo selekcionirani bolniki, visoko tumorsko breme): GEM + nab-pakli
  - acinarno-celični karcinom – kemoterapija z derivati platine
- **PS ≥ 3:** podporno zdravljenje

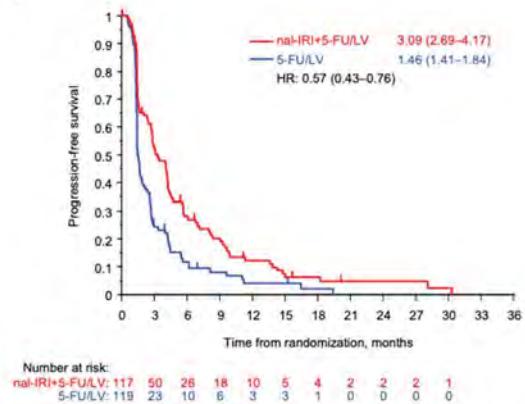

## ZDRAVLJENJE METASTATSKE BOLEZNI - II. LINIJA NAPOLI - 1

A

C

## ZDRAVLJENJE METASTATSKE BOLEZNI – II. LINIJA

- ❖ Odločitev o kemoterapiji 2. reda je individualizirana
- ❖ Optimalen režim ni dorečen (PS, predhodno zdravljenje)
- ❖ BRCA 1,2 + PALB 2 mutirani – GEM/CIS + PARP inhibitorji. Če so tovrstno zdravljenje že dobili v I. liniji ali refraktorni na FOLFIRINOX ali mFOLFOX v I. liniji, naj za II. linijo prejmejo nab-Pakli GEM (PS 0-1), sicer (PS > 1): GEM mono ali GEMCAP ali fluoropirimidini mono
- ❖ Če so bili v I. liniji zaradi zvišanega bilirubina zdravljeni s kemoterapijo po shemi FOLFOX, naj v II. liniji prejmejo sheme z liposomskim irinotekanom ali GEM mono ali CAP mono

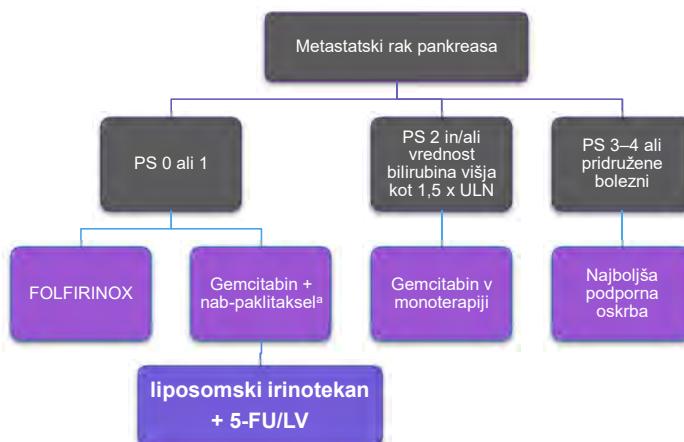

## ZDRAVLJENJE METASTATSKIE BOLEZNI – II. LINIJA

- ❖ Za bolnike, ki so v I. liniji prejeli KT na osnovi GEM in so v PS 0-1, v II. liniji priporočamo 5-FU + oxaliplatin ali 5-FU + liposomski irinotekan
- ❖ Za bolnike v slabšem PS, ki so v I. liniji prejeli KT na osnovi GEM, v II. liniji priporočamo monoterapijo s fluoropirimidini (CAP, S1)
- ❖ Za bolnike v izrazito slabem PS: podporno simptomatsko zdravljenje
- ❖ Za redke bolnike z MSI-H: v 2. liniji imunoterapija
  
- ❖ Za bolnike, ki so v I. liniji prejeli KT na osnovo 5-FU (FOLFIRINOX, mFOLFIRINOX, FOLFOX ...), v II.-linij priporočamo KT na osnovi GEM

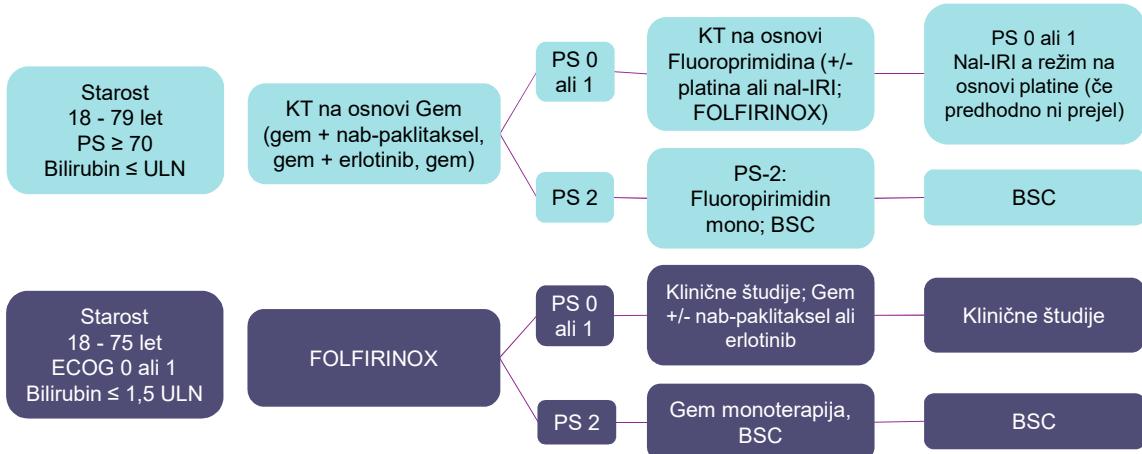

## 2015 ESMO SMERNICE ZA ZDRAVLJENJE BOLNIKOV Z METASTATSKIM RAKOM PANKREASA

<sup>a</sup> Pri zelo izbranih bolnikih s stanjem zmogljivosti 2 po ECOG lahko zaradi velikega tumorskega bremena gemcitabin in nab-paklitaksel predstavljata najboljšo možnost odziva.  
1. Ducreux M, et al. Ann Oncol 2015; 26 Suppl 5:v56-68; 2. E-update, June 2017: <http://www.esmo.org/Guidelines/Gastrointestinal-Cancers/Cancer-of-the-Pancreas/eUpdate-Treatment-Recommendations>.

## METASTATSKI RAK TREBUŠNE SLINAVKE: ZAPOREDNO ZDRAVLJENJE – III. LINIJA

NCCN Guidelines Pancreatic Adenocarcinoma Version 3.2019

FDR gemcitabin: fixed-dose-rate gemcitabine (10 mg/m<sup>2</sup>/min); OFF: 5-FU/LV/oxaliplatin; dMMR: mismatch repair deficient; MSI-H: microsatellite instability.

## VLOGA PODPORNEGA ZDRAVLJENJA

- ❖ Rak trebušne slinavke je karcinom, ki bolnikom povzroča hude subjektivne težave
- ❖ V ospredju zdravljenja naj bo agresivno lajšanje bolečine, poskrbeti je treba za čim počasnejšo izgubo telesne teže (preprečevati anoreksijo), ustrezno naj se zdravi bolnikova anksioznost in depresija.
- ❖ V primeru biliarne obstrukcije poskus vstavitve stentov ali zunanje biliarne drenaže
- ❖ Ob zapori pasaže na nivoju dvanaštnika, razmislek o kirurški intervenciji (by pass) ali vstavitev stentov
- ❖ Trombembolični zapleti – še pogostejši kot pri drugih malignomih – možnost preventivne uvedbe tromboprofilakse
- ❖ Bolniki in svojci morajo razumeti, da je specifično zdravljenje s KT paliativno in ne kurativno

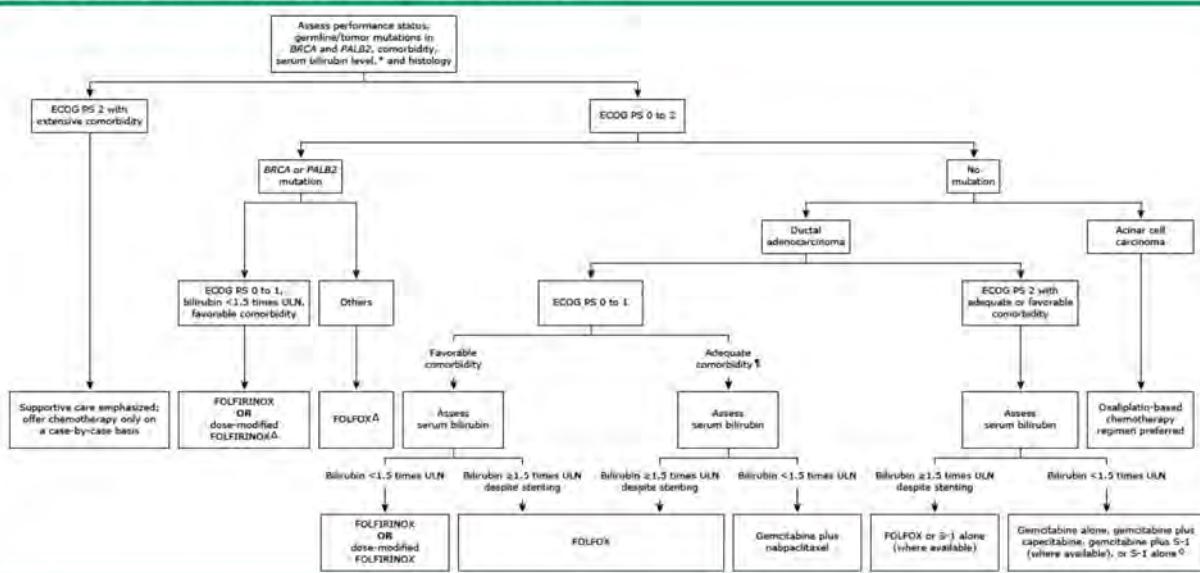

## ZAKLJUČKI

- ❖ Rak trebušne slinavke je rak z najnižjim 5-letnim preživetjem (8 %)
- ❖ Edina možnost ozdravitve je resekcija, za katero je primernih slabih 20 % bolnikov (mOS nezdravljenih, lokalno napredovalih je 8-12 mesecev, mOS nezdravljenih metastatskih bolnikov je 3-6 mesecev)
- ❖ Najbolje rezultate preživetja je doseglo zdravljenje po shemi FOLFIRINOX (mOS = 11,1 meseca)
- ❖ Preživetja se še podaljujejo, če bolnikov PS dopušča nadaljevanje zdravljenja z 2. linijo KT
- ❖ Zdravljenje s KT tem bolnikom zagotavlja predvsem izbojšano kvaliteto življenja, saj zmanjuje s tumorjem povezane znake bolezni
- ❖ Ključnega pomena je, da bolnike s tovrstnim malignom takoj vključimo v program podpornega simptomatskega zdravljenja

 Joseph K. Salama MD <sup>a,n</sup>, Richard Tuli MD, PhD <sup>o</sup>,  
 Albert C. Koong MD, PhD <sup>h</sup>

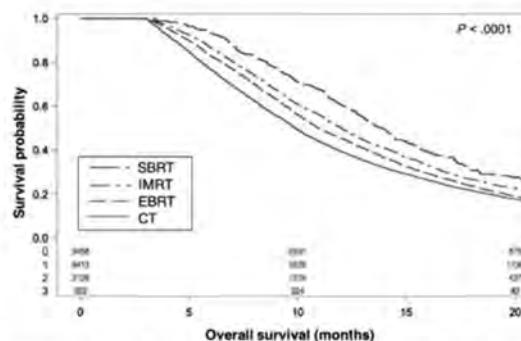

**Table 4** Recommendations for sequencing of chemotherapy and RT in patients receiving RT

KQ 3 recommendations	Strength of recommendation	Quality of evidence	Consensus
1. For patients with resected pancreatic cancer receiving adjuvant therapy, delivery of chemoradiation following 4-6 months of systemic chemotherapy is recommended.	Strong	Moderate	92%*
2. For patients with borderline resectable pancreatic cancer receiving neoadjuvant therapy, delivery of RT following 2-6 months of systemic chemotherapy is recommended.	Strong	Moderate	92%*
3. For patients with unresectable or locally advanced pancreatic cancer without systemic progression following 4-6+ months of chemotherapy, definitive RT is recommended.	Strong	Moderate	85%*

Abbreviations: KQ = key question; RT = radiation therapy.

\* The medical physics representative abstained from rating these recommendations.

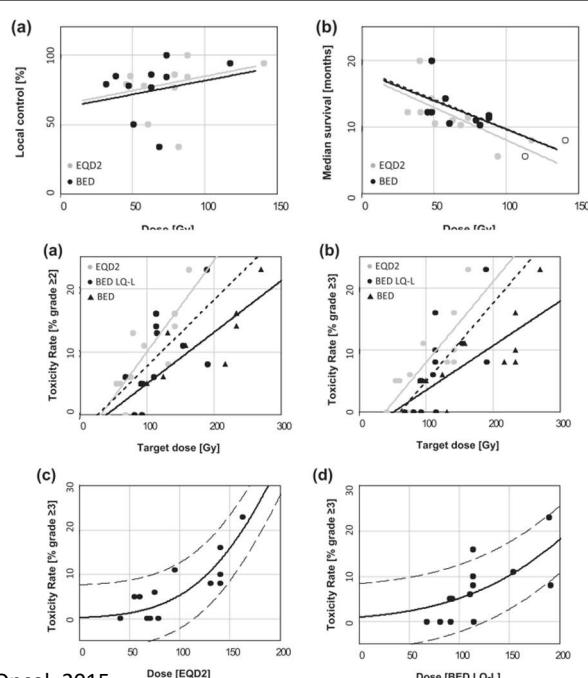

Večja populacijska raziskava – 14 000 bolnikov s karcinomom pankreasa

↑ preživetje s SBRT

**Figure 1.** Kaplan-Meier curves of overall survival for patients with unresected pancreatic adenocarcinoma treated with CT alone, EBRT, SBRT, or IMRT. CT indicates chemotherapy; EBRT, external-beam radiotherapy; IMRT, intensity-modulated radiation therapy; SBRT, stereotactic body radiotherapy.

De Geus et al., Cancer. 2017

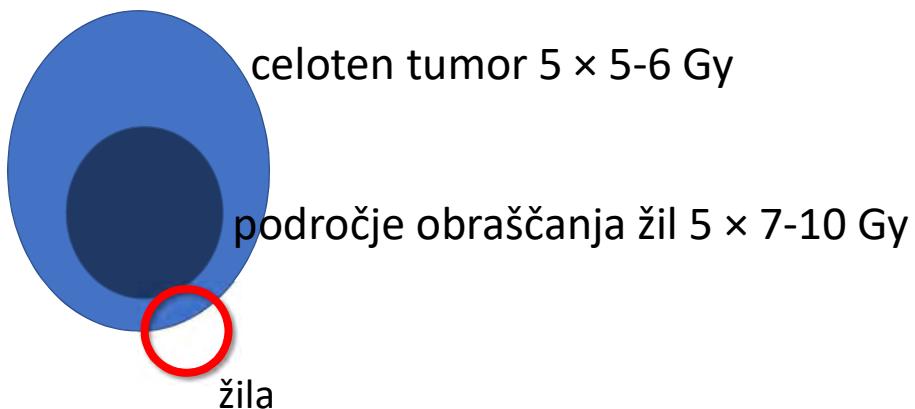

BED  
75Gy

5 frakcij

Cevasti organi!!!!

Brunner et al., Radiother Oncol. 2015

Chuong et al., IJROBP. 2013

## Inoperabilni lokalno napredovali in mejno resekabilni karcinom pankreasa

- 56.1% mejno resekabilnih tumorjev operiranih, 96.9 % od teh R0 resekcija
- Srednje preživetje bolnikov z mejno resekabilnim tu. **16,4 mesecev** v primerjavi z lokalno napredovalim **15 mesecev**
- Nič G3 akutna toksičnost, 5.3% G3 pozna toksičnost

Chuong et al., IJROBP. 2013

**1-letna LC 81%**

## Primerni bolniki za SBRT karcinoma pankreasa

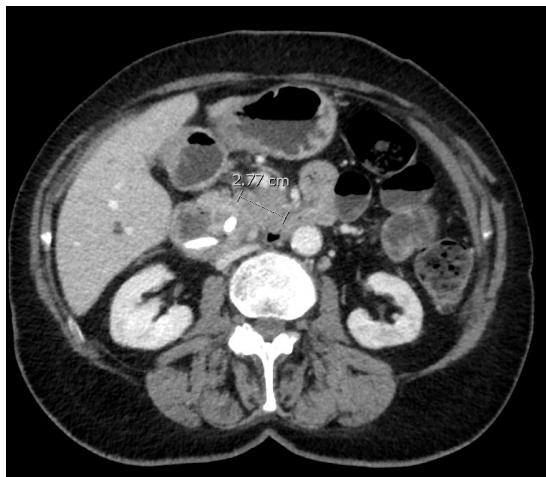

- Histološko/citološko verificiran karcinom pankreasa.
- Karcinom pankreasa brez oddaljenih metastaz (mejno ali neoperabilen tumor ali recidiv).
- Tumor manjši kot 5 cm.
- PS 0 ali 1.
- Tumor oddaljen  $> 2\text{mm}$  od želodca, dvanajstnika ali drugih cevastih organov.

To je v teoriji, kaj pa praksa...

## Bolnica, letnik 1946

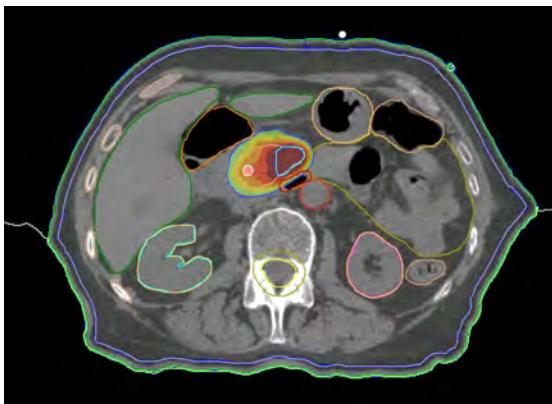

- 2013 Ca dojke, po OP pT1pN0M0, adjuvantno RT in HT- v remisiji
- Avg. 2018 adenokarcinom glave pankreasa
- Med poskusom vstavitev ERCP in stenta pride do manjše perforacije
- Mejno resekabilen (kontakt AMS manj kot 180°)
- 1. ciklus KT: FOLFIRINOX - hudi neželjeni učinki
- V tujino po drugo mnenje glede OP in SBRT

## Drugo mnenje

- Ob pregledu v tujini visok marker
- Ponovni CT – november 2018 – progres - lokalno napredovali karcinom, brez metastaz
- Laparoskopija izključi karcinozo
- Predlagajo SBRT, sicer zadržani zaradi bližine divertikla duodenuma

## SBRT načrt obsevanja

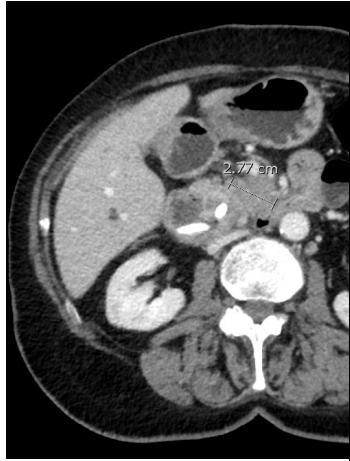

- Februar 2019 obsevanje s SBRT tehniko na OI
- 5 frakcij z dozo 6 Gy na področje obraščanje žilja
- Brez toksičnih sopojavov

- Po SBRT sistemsko zdravljenje na KOGE
- Padec tumorskega markerja

## Maj 2019

28.1.2019

25.5.2019

- Tumorska formacija z obraščanjem AMS po obsegu primerljiva, bolj hipodenzne strukture – vitalnost?
- HPB konzilij: sledenje

## September 2019

- 3.9.19: PET CT - metaboličen regres malignoma pankreasa, najverjetneje z manjšim vitalnim ostankom malignega infiltrata, suspektne drobne pljučne lezije v blagem porastu
- Kontrola: dobro splošno počutje, porast tumorskega markerja, eventuelno za sistemsko zdravljenje na KOGE

# Slikovna diagnostika za sledenje? Oceno resekabilnosti?

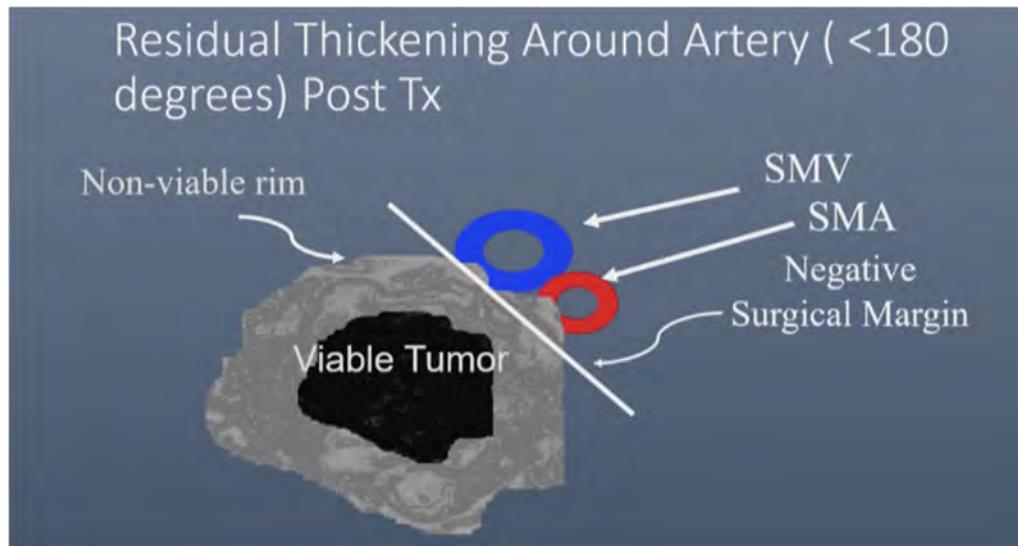

Original Article

## Response of Borderline Resectable Pancreatic Cancer to Neoadjuvant Therapy Is Not Reflected by Radiographic Indicators

Matthew H. G. Katz, MD<sup>1</sup>; Jason B. Fleming, MD<sup>1</sup>; Priya Bhosale, MD<sup>2</sup>; Gauri Varadhachary, MD<sup>3</sup>; Jeffrey E. Lee, MD<sup>1</sup>; Robert Wolff, MD<sup>3</sup>; Huamin Wang, MD<sup>4</sup>; James Abbruzzese, MD<sup>3</sup>; Peter W. T. ## ZAKLJUČEK

- Perioperativna kemoterapija se svetuje pri vseh bolnikih z nemetastatskim resekabilnim karcinomom želodca  $\geq$  stadij IB [ESMO I, A]:
  - perioperativna kemoterapija naj vključuje derivate platine in 5-FU,
  - dodatek epirubicina opcijski (toksičnost),
  - dodatek taksanov (FLOT) izboljša odgovor na zdravljenje, podaljša preživetje brez ponovitve bolezni in celokupno preživetje → novi standard
- Bolniki  $\geq$  stadij IB, operirani brez perioperativne kemoterapije, so kandidati za dopolnilno kemoradioterapijo ali dopolnilno kemoterapijo [ESMO I, A]
- Tarčna zdravila zaenkrat nimajo vloge v neoadjuvantnem sistemskem zdravljenju raka želodca
- MSI status – napovedni dejavnik perioperativnega zdravljenja

## *Lymphadenectomy and multivisceral resections in advanced gastric cancer*

Omejc M

## Lymph nodes

Japanese Gastric Cancer Association. Japanese classification of gastric carcinoma: Gastric Cancer 14, 101–112 (2011).

Stations 1-11: an average of 27 nodes (range 17-44 nodes)  
Stations 1-16: an average of 43 nodes (range 25-64 nodes)

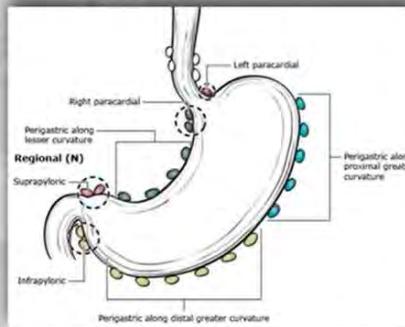

Wagner PK, Ramaswamy A, Rüschoff J, Schmitz-Moormann P, Rothmund M. Lymph node counts in the upper abdomen: anatomical basis for lymphadenectomy in gastric cancer. Br. J. Surg. 78(7), 825–827 (1991).

## D1 lymphadenectomy

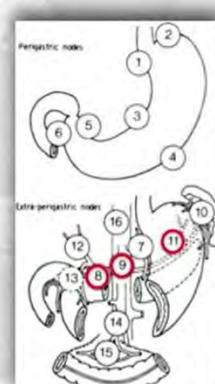

- D1 lymphadenectomy refers to a limited dissection of only the perigastric lymph nodes (stations 1 to 7)

- D1 indication:
  - T1a without EMR / ESD criteria
  - cT1bN0 Histologically distinct and 1.5 cm or less in diameter

## D1 + lymphadenectomy

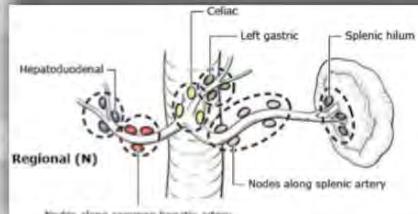

- In the Japanese literature, a D1+ lymphadenectomy refers to a D1 lymphadenectomy plus stages 8a, 9, and 11p.
- D1 + lymphadenectomy is indicated for cT1N0 tumors other than the above criteria.

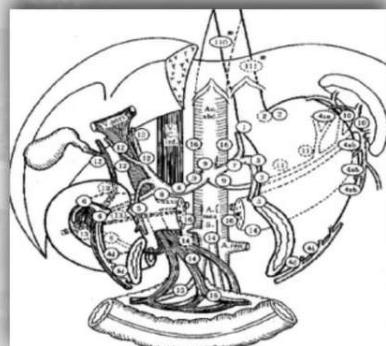

## D2 lymphadenectomy

- D2 lymphadenectomy is a dissection that involves removal of the lymph nodes along the hepatic, left gastric, celiac and splenic arteries, as well as those of the splenic hilum (stations 1 to 12a).
- Indication:
  - Tumors T2-T4 and cT1N +
  - Complete clearance of 10 nodules by splenectomy should be considered for potentially curable T2-T4 tumors that invade the greater curvature of the upper part of the stomach

## D3 lymphadenectomy

- The D3 dissection is a superextended lymphadenectomy.
- Some describe it for a D2 lymphadenectomy plus nodes within the hepatic portal and periaortic regions (stations 1 to 16) and others to designate a D2 lymphadenectomy plus periaortic lymph node dissection (PAND) alone
- Most Western surgeons classify the disease in these regions as distant metastases and do not remove nodes routinely in these areas during a potentially curative gastrectomy.

## *Lymphadenectomy*

- to accurately stage gastric cancer (16 nodes)
- to reduce the risk of locoregional recurrence (24 nodes)
- to improve survival (up to 40 nodes)  
D3 (or D2 with para-aortic nodal dissection).

*Does more extended lymphadenectomy lead to a survival advantage for patients undergoing surgery for gastric carcinoma?*

*Does the clinical evidence in literature support this?*

## “Stage migration”

*“When the Okies left Oklahoma and moved to California, they raised the average intelligence level in both states.”*

Will Rogers

- ↑ extended lymphadenectomy = ↑ better staging
- “Upstaging”
- Improvement in “stage-specific” survival in extended lymphadenectomy (D2, D3)

## Clinical evidence D1 vs D2

- The majority of multiple randomized trials have not shown a survival benefit of D2 versus D1
- However, recent studies support the concept that if D2 dissection can be performed with low operative mortality, survival will be positively affected

De Steur WO, Hartgrink HH, Dikken JL, Putter H, Van De Velde CJ. Quality control of lymph node dissection in the Dutch Gastric Cancer Trial. Br. J. Surg. 102(11), 1388–1393 (2015).

Dutch study: D2 vs D1 ?

*“If postoperative death is excluded, the 11 year survival data favor the D2 dissection”.*

van de Velde CJH, 2004

*D2 lymphadenectomy in the era of neoadjuvant chemotherapy ?*

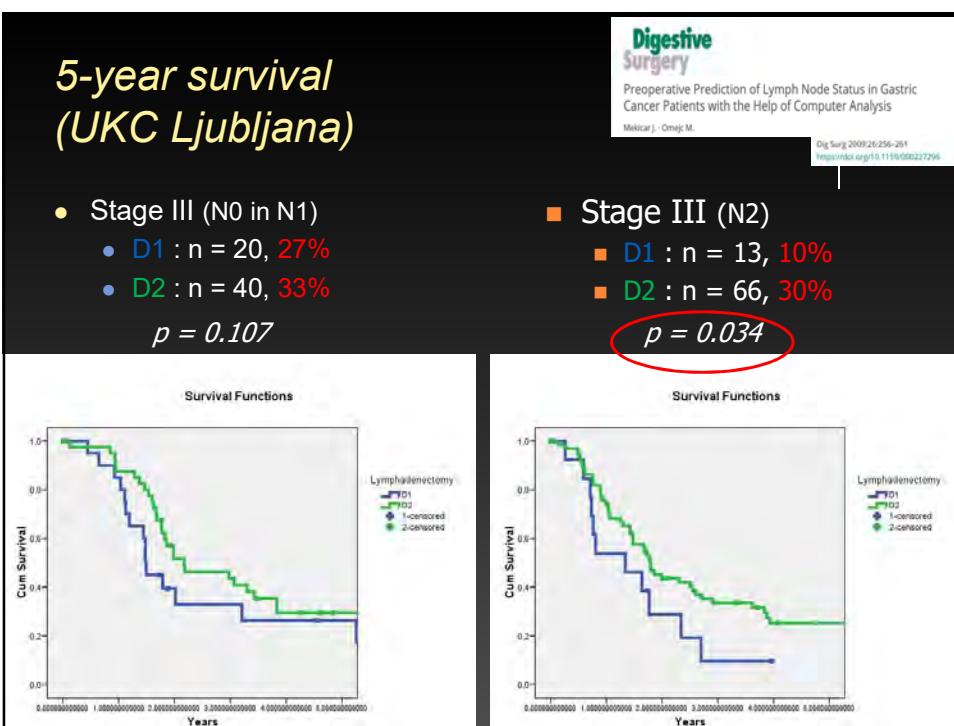

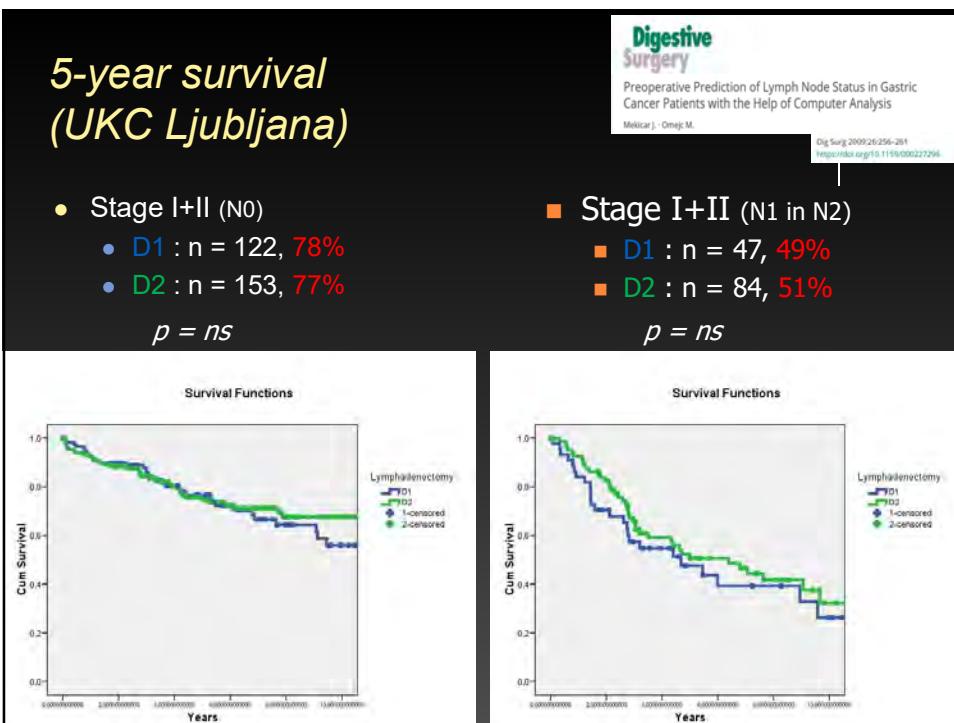

- 129 pts. gastrectomy with D2 lymphadenectomy
- 22 pts. complete pathological response of primary tumor (17%)
- 12 pts. (55%) lymph node metastases

Shrikhande et al. World Journal of Surgical Oncology 2013, 11:31  
<http://www.wjso.com/content/11/1/31>

**RESEARCH** **Open Access**

**D2 lymphadenectomy is not only safe but necessary in the era of neoadjuvant chemotherapy**

Shrikhande et al. World Journal of Surgical Oncology 2013, 11:31

## *D2 lymphadenectomy*

- D2 lymphadenectomy is a safe procedure for experienced surgical team.
- Better local control and staging.
- Potential benefit in subgroup with occult disease in D2 lymph nodes after D2 lymphadenectomy.

## *Conclusions*

- Cancer specific mortality rate significantly lower in patients who undergo D2 rather than D1 lymphadenectomy.
- No evidence that D3 (paraaortic lymphadenectomy) confers a survival benefit on D2 dissection.
- D1 or D1+ lymphadenectomy is indicated for cT1N0.
- D2 for cN+ or cT2-T4 tumors.

*Given that the pre and intraoperative diagnosis of lymph node metastasis remains unreliable, a D2 lymphadenectomy should be performed whenever nodal involvement is suspected.*

## *Conclusions*

- performance of a D2 lymphadenectomy provides the maximal benefit that can be achieved from a lymphadenectomy in gastric cancer for stages  $\geq$ IB
- D2 lymphadenectomy can improve disease specific survival in patients with resectable carcinoma, when increased incidence of postoperative mortality does not reduces its therapeutic benefit.

## *Multivisceral resections: pT4b tumor*

UICC 8th ed. TNM classification:

*Gastric cancer that invades adjacent structures (liver, colon, small intestine, adrenal, diaphragm, pancreas, spleen, kidney) is classified as pT4b.*

- an important decrease in the patient's general condition and peritoneal (microscopic or macroscopic) dissemination.

### *Multivisceral resections: pT4b tumor*

- not uncommon to interpret a CT scan as an invasion of adjacent organ (cT4b) and then confirm a desmoplastic reaction in the pathological specimen analysis.
- the challenge of evaluating tumor invasion is even greater when a tumor closely related to the pancreas
- accuracy of the radiological method: < 50%

*Seevaratman R, Cardoso R, McGregor C et al. How useful is preoperative imaging for tumor, node, metastasis (TNM) staging for gastric cancer? A meta-analysis. Gastric Cancer. 2012;15:S3-18.*

*Cardoso R, Coburn N, Seevaratman R et al. A Systematic review and meta-analysis of the utility EUS for preoperative staging for gastric cancer. Gastric Cancer. 2012;15 Suppl 1:S19-26.*

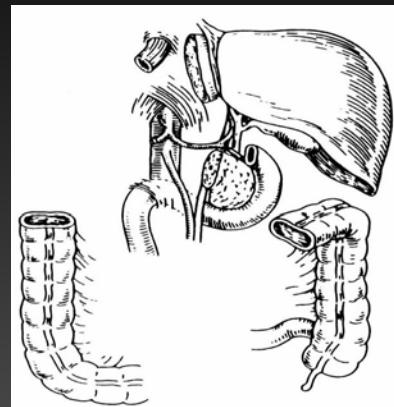

### *Multivisceral resections*

- aggressiveness of the multiorganic surgery
- real benefit of multivisceral resection compared to palliative resections or derivative procedures ?
- multimodal treatment ?

## Multivisceral resections

### ● T4 tumor: R0 resection

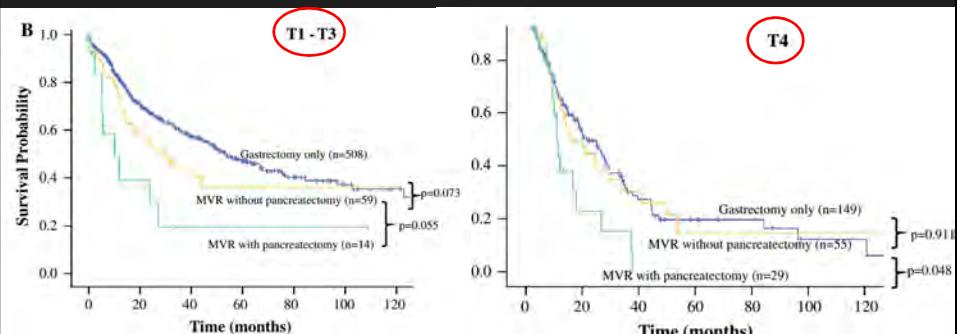

- spleen, body and tail of pancreas, II and III. segment of the liver, transverse colon, right colon, duodenum with the head of pancreas.
- LUAE (left upper abdominal exenteration).

### Multivisceral Resection for Gastric Cancer: Results from the US Gastric Cancer Collaborative

Thuy B. Tran, MD<sup>1</sup>, David J. Worhunsky, MD<sup>1</sup>, Jeffrey A. Norton, MD<sup>1</sup>, Malcolm Hart Squires III, MD<sup>2</sup>,

*Survival based on extent of resection: 159 pts*

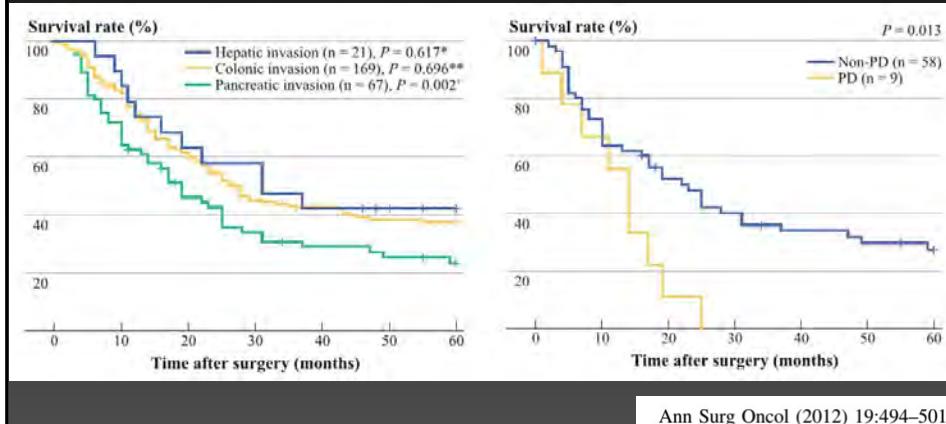

Ann Surg Oncol (2015) 22:S840–S847

## Prognosis of Curatively Resected pT4b Gastric Cancer with Respect to Invaded Organ Type

Jae-Seok Min, MD<sup>1</sup>, Sung-Ho Jin, MD<sup>2</sup>, Sunhoo Park, MD<sup>3</sup>, Sang-Bum Kim, MD<sup>2</sup>, Ho-Yoon Bang, MD<sup>4</sup>, and Jong-Inn Lee, MD<sup>2</sup>

*Survival based on extent of resection: 243 pT4b pts.*

## Conclusions

- Gastrectomy with MVR can be pursued in patients with locally advanced gastric cancer with the goal of R0 resection.
- Morbidity and mortality may be increased, but the benefit of attaining an R0 resection has a positive impact on overall patient survival.
- An attempt to identify true histological invasion before and during resection.
- In pT4b gastric cancer, pancreatic invasion the least favorable prognosis especially in cases requiring pancreaticoduodenectomy.
- Patient selection for MVR must take into account nodal status and the number of organs involved.
- More favorable after curative resection in patients without advanced lymph node stages (N2, N3a, and N3b)

## VLOGA RADIOTERAPIJE PRI ZDRAVLJENJU RAKA ŽELODCA

Irena Oblak

### Karcinom želodca

- ▶ Gre za bolezen s slabo prognozo;
- ▶ Bolezen je neresektabilna pri približno 50% bolnikih;
- ▶ Po radikalni operaciji se bolezen v 75% ponovi;
- ▶ 30 – 70% ponovitev je le lokalnih in/ali regionalnih.

1. Gunderson LL, Sosin H. Adenocarcinoma of the stomach: Areas of failure in a reoperation series (second or symptomatic look) clinicopathological correlation and implications for adjuvant therapy. *Int J Radiat Oncol Biol Phys* 1982.

2. Smalley SR, et al. Gastric surgical adjuvant radiotherapy consensus report: rationale and treatment implementation. *Int J Radiat Oncol Biol Phys* 2002.

3. Willett CG, Gunderson LL. Stomach. In: Perez CA, Brady LW, editors. *Principles and practice of radiation oncology*, 5th edition. Philadelphia: Lippincott-Raven Publishers; 2008.

## Ponovitev bolezni po OP

Recurrences	Mean	Range
Locoregional - only	54%	(29-72%)
Locoregional - total	88%	(38-94%)
Distant - only	25%	(18-35%)

Gunderson et al. Int J Radiat Oncol Phys 1982; Smalley et al. Int J Radiat Oncol Phys 2002; Lim et al. Br J Cancer 2004

## Zdravljenje

- ▶ Do leta 2000: le OP
- ▶ Leta 2001 smo uvedli adjuvantno RT+KT
- ▶ Leta 2006 smo uvedli predoperativno zdravljenje:

a). neresektabilni TU: KT+RT → OP

b). resektabilni TU: KT → OP → KT

## Ni dokazov

- ▶ Katero kombinirano zdravljenje je najboljše?
- ▶ Ali je boljše poOP ali predOP zdravljenje?
- ▶ Ali je boljša predOP KT ali RT+KT?

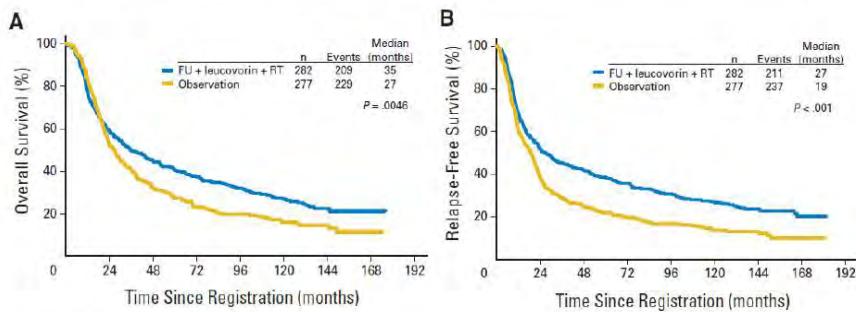

## Splošne usmeritve

- ▶ Za bolnike stadija  $\geq cT2N0$ : kombinirano zdravljenje;
- ▶ Raje predOP zdravljenje, predvsem pri:
  1. Bulky T3-4
  2. cN<sup>+</sup>
  3. Linitis plastica
- ▶ OP → ev. poOP zdravljenje za:
  1. cT1-2
  2. cN0
  3. Non-bulky
  4. Distalni TU

## poOP RT+KT

### SWOG 9008/INT 0116

	Surgery	CRT + surgery	p-value
Median DFS	19 months	30 months	0,001
3 year survival	40 %	50%	
Median survival	27 months	36 months	0,03

Macdonald et al. N Engl J Med 2001  
Smalley et al. J Clin Oncol 2002

## poOP zdravljenje

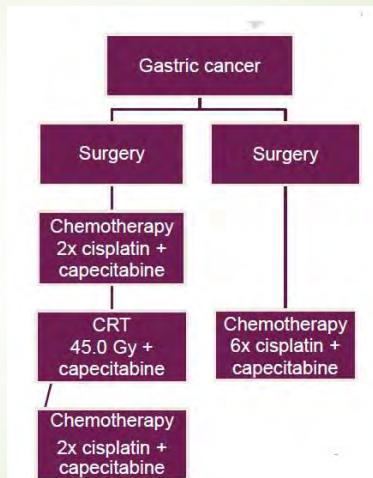

► **RT+KT** (FOLFOX, ECF, ECX ali derivati 5-FU)

► Lahko le KT (CAPOX 6 mesecev), če:

1. D2 limfadenektomija
2.  $\geq 16$  lgl
3. pN0
4. pT2-3

2. Kim S, Lim DH, Lee J, et al. An observation study suggesting clinical benefit for adjuvant postoperative chemoradiotherapy in population of over 500 cases after gastric resection with D2 nodal dissection for adenocarcinoma of the stomach. *Int J Radiat Oncol Biol Phys* 2005
3. Noh SH, Park SR, Yang HK, et al. Adjuvant capecitabine plus oxaliplatin for gastric cancer after D2 gastrectomy (CLASSIC): a 5-year follow-up of an open-label, randomised phase 3 trial. *Lancet Oncol* 2014; 15:1389.

## ARTIST raziskava

Lee et al. J Clin Oncol 2012

## ARTIST raziskava

## Metaanaliza poOP KT vs. RT+KT

► poOP RT+KT:

1. ↑ DFS<sub>5</sub>
2. ↓ LR
3. Trend ↑OS

Dai Q, Jiang L, Lin RJ, et al. Adjuvant chemoradiotherapy versus chemotherapy for gastric cancer: a meta-analysis of randomized controlled trials. J Surg Oncol 2015; 111:277.

## Indikacija za poOP zdravljenje pri pT2pN0:

1. < D2 limfadenektomija
2. ≤ 16 lgl
3. G3
4. Limfovaskularna invazija ali
5. Perinevralna invazija

## PreOP zdravljenje

### PREDNOSTI:

- ▶ Downstaging : ↑R0 resekciј;
- ▶ Uničenje mikro-zasevkov;
- ▶ Izboljšanje sy in znakov, ki jih povzroča TU;
- ▶ ↓ toksično, kot poOP

## PreOP zdravljenje

### POMANJKLIVOSTI:

- ▶ Možen progres med preOP TH
- ▶ rizik poOP morbiditete?

## PredOP zdravljenje s KT

- MAGIC trial (3xKT→OP→3xKT)
- FLOT4-AIO trial (4xKT→OP→4xKT):
  - ↑pKR (16% vs 8%)
  - ↑OS: 50 vs 35 mes. in S3: 57 vs 48%

## Prednosti predoperativne RT+KT pred pooperativno RT+KT pri raku želodca

- ▶ Zdravimo ↑ delež bolnikov
- ▶ ↑ oksigeniranost tkiv → učinkovitost RT in KT
- ▶ ↓ možnost ostanka TU celic v OP polju
- ▶ ↓ razvoj M+(takošna KT)
- ▶ vrisovanje RT volumnov natančnejše (lokacija TU znana)
- ▶ ↓ toksičnih pojavov (zdravimo delež bolnikov)
- ▶ ↓ bolnikove težave, PS in kvaliteto življenja
- ▶ ↑ učinkovito?

Ajani JA, et al. Multi-institutional trial of preoperative chemoradiotherapy in patients with potentially resectable gastric carcinoma. J Clin Oncol. 2004

## Neresekabilni rak želodca brez oddaljenih zasevkov: optimalno zdravljenje?

- ▶ predOP KT
- ▶ predOP RT+KT
- ▶ Kombinacija

- V okviru raziskav;
- Natančen restaging → KRG eksploracija (bulky N+, ascites)

## Zaključki

- ▶ Tako predOP KT, kot RT+KT omogočata downstaging in ↑ R0 resekcij ter ↑ preživerje v primerjavi s samo OP;
- ▶ Raziskavi POET in avstral-azijska: predoperativna RT+KT boljše rezultate v primerjavi s predoperativno KT v smislu ↑ R0-resekcij, ↑ TU regresa in ↑ št. yN0-stadija;
- ▶ Rezultati metaanalize (Ronellenfitsch) kažejo, da predoperativna RT+KT ↓ smrtnost zaradi tumorja za 10 %, v primerjavi s preoperativno kemoterapijo;
- ▶ Nujna je randomizirana raziskava, ki bo primerjala obe vrsti zdravljenja: TOP GEAR raziskava.

Doublet or Triplet?

O —

Yamaida Y et al. Lancet Gastroenterol 2019;4:501-510

## Kombinacija z epirubicinom? Ne!

„Whether the survival benefit for three-drug combinations including cisplatin, 5-FU, and epirubicin as compared to the same regimen without epirubicin is still valid when second-line therapy is routinely administered and when cisplatin is replaced by oxaliplatin and 5-FU by capecitabine is questionable.

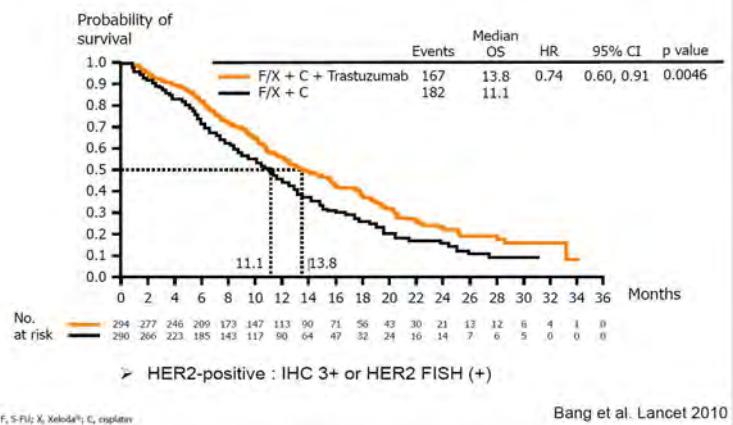

Furthermore, the magnitude of the observed survival benefits for the three-drug regimens is not large enough to be clinically meaningful as defined recently by the American Society for Clinical Oncology (Ellis 2014). „\*

## HER2-pozitivni rak želodca TOGA - Trastuzumab + KT

- HER2 pozitivni: ~16%
- Proksimalni > distalni
- Intestinalni >> difuzni
- Samo za prvo linijo pri Her-2 pozitivnih tu.
- Problem: klonalna heterogenost mRŽ, razvoj rezistence

Oj

## Kombinacija z irinotekanom? Da!

- „In contrast to the comparisons in which a survival benefit was observed by adding a third drug to a two-drug regimen at the cost of increased toxicity, the comparison of regimens in which another chemotherapy was replaced by irinotecan was associated with a survival benefit (of borderline statistical significance), but without increased toxicity. For this reason irinotecan/5-FU-containing combinations are an attractive option for first-line treatment.“

## Metastatski rak želodca – prva linija Dvojček ali trojček pri starejših - FLOT 65+

FLOT65+ (N 143 )

FLO/FLOT

FLOT več toksičnosti gr 3- 4

**81.9% vs 38.6%; P < .001**

Poslabšanje QoL > 10 točk

**47,5% vs 20,5%**

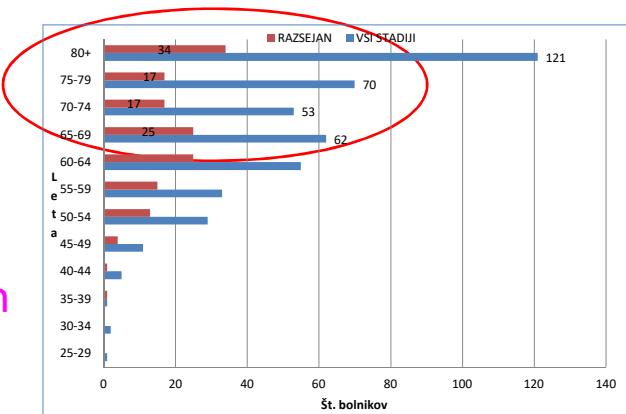

Al-Batran S et al., Eur J Cancer 2013; 49: 2823-2831

## Incidenca raka želodca po starostnih skupinah in stadijih, RS 2016

Starejši od 65 let:

- 69% (306/443) vseh novih bolnikov z RŽ
- 61% (93/152) vseh novih bolnikov z metastatskim RŽ

Oj

mRŽ: 40-80% bolnikov ob postavitvi diagnoze

## GO2 raziskava – KT v polnih ali reduciranih odmerkih?

Recruitment  
(certain randomisation)

- 512 patients
- 2014 – 2017
- 61 UK hospitals

### Trial design

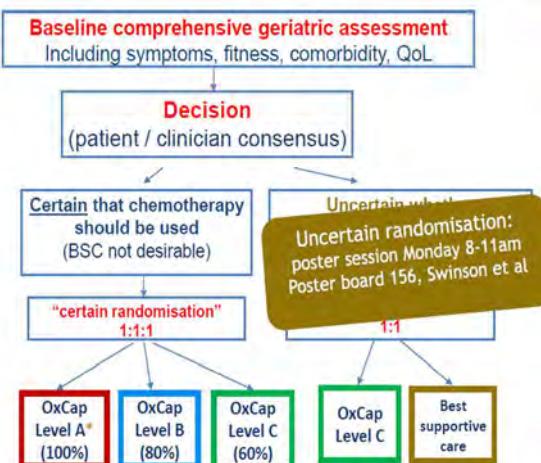

Phase III, randomised, multi-centre, prospective, controlled, open label, non-inferiority trial

#### Eligibility

Not fit for full-dose 3-drug chemotherapy, but suitable for reduced intensity chemotherapy.

#### Follow-up

Total 1 year; 9 weekly imaging and PROMs

\*Oxaliplatin 130mg/m<sup>2</sup> day 1 of a 21 day cycle Capecitabine 625mg/m<sup>2</sup> bd continuously - given until progression

## GO2 raziskava – značilnosti bolnikov

	OxCap Level A* (100%)	OxCap Level B (80%)	OxCap Level C (60%)	
	Level A (n=170)	Level B (n=171)	Level C (n=173)	Total (n=512)
Median age (range)	76	76	77	76 (51 - 96)
Male gender	77%	75%	72%	75%
Site of primary	Oesophagus	32%	42%	38%

### eUpdate – Gastric Cancer Treatment Recommendations

**Published:** 4 November 2019. Authors: ESMO Guidelines Committee

#### Clinical Practice Guidelines

This update refers to the [Gastric cancer: ESMO Clinical Practice Guidelines for diagnosis, treatment and follow-up](#). Smyth EC, Verheij M, Allum W et al. Ann Oncol 2016; 27 (Suppl 5): v38–v49.

#### Section

##### Management of advanced/metastatic disease, second- and further-line treatment

#### Text update

This sentence:

“Treatment options may be used sequentially in second and third line, but there is no clear evidence for a benefit beyond second line treatment.”

Is replaced with:

In a phase III randomised trial of patients with chemorefractory gastric cancer (patient treated with at least two prior lines of chemotherapy), trifluridine/tipiracil improved overall survival (OS) compared to placebo {OS 5.7 versus 3.6 months hazard ratio (HR) 0.69 [95% confidence interval (CI) 0.56–0.85], two-sided  $P=0.00058$ }.

#### Recommendation:

Third-line chemotherapy with trifluridine/tipiracil is recommended for patients who are of PS 0–1 [I, A].

Oj

## TAGS - randomizirana, dvojno slepa raziskava f.3: TAS-102 vs placebo pri bolnikih z refraktornim mRŽ

### Trifluridin/tipiracil pomembno podaljša celokupno preživetje<sup>1</sup>

Primarni izid

Za 2,1 meseca izboljšana mediana OS v primerjavi s placebo<sup>1</sup>

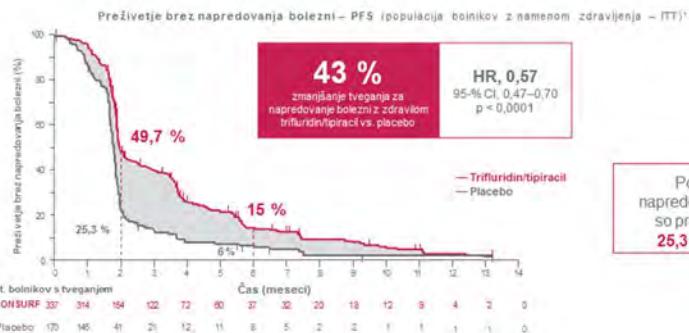

21 % bolnikov, zdravljenih z zdravilom trifluridin/tipiracil, je bilo še vedno živih po 12 mesecih napram 13 % bolnikov na placebo<sup>1</sup>

GE/C: rak gastroezofaginalnega prehoda, CI: interval zaupanja, HR: razmerje tveganja, OS: celokupno preživetje. Obe skupini sta prejemali najboljšo podporno oskrbo.  
1. Shitara K, et al. TAGS Study Group. Lancet Oncol. 2018; 19(11):1437–1448. 2. Mansoor W, et al. Predstavljeno na 55. konferenci ASCO 2019. 3. Ilson DH, et al. Predstavljeno na simpoziju ASCO GI 2019.

## TAGS - randomizirana, dvojno slepa raziskava f.3: TAS-102 vs placebo pri bolnikih z refraktornim mRŽ

### PFS

- Po 6 mesecih bolezen ni napredovala pri 15 % bolnikov, ki so se zdravili z zdravilom trifluridin/tipiracil, vs. 6 % na placebo<sup>1</sup>
- Mediana PFS je bila 2,0 meseca z zdravilom trifluridin/tipiracil vs. 1,8 meseca s placebo<sup>1</sup>

Po 2 mesecih bolezen ni napredovala pri 49,7 % bolnikov, ki so prejeli trifluridin/tipiracil, vs. 25,3 % bolnikov na placebo<sup>2\*</sup>

CI: interval zaupanja, HR: razmerje tveganja, PFS: preživetje brez napredovanja bolezni. \*Povzetek glavnih rezultatov zdravila LONSURF, julij 2019.

## LOKALNO NAPREDOVAL ADENOKARCINOM GEP (cT3-4 ali cN1-3 M0)

Primerjava obeh režimov

Potekata randomizirani študiji faze 3:

1. ESOPEC (NCT02509286)
2. TOPGEAR (NCT01924819)

ESMO UPPER GI CANCER 2019

## ZDRAVLJENJE NAPREDOVALE BOLEZNI

- NGS testiranje: **MSI-H**
- Avgust 2018: uvedba zdravljenja s PD-1 zavircem **pembrolizumabom**
- Dosežen popolni odgovor
- Neželeni učinki zdravljenja:
  - Hipotiroidizem st. 2 (levotiroksin)
  - Ledvično popuščanje st. 1
  - Občasne artralgije st. 1

## ZDRAVLJENJE V SLOVENIJI

- Od julija 2019 do danes je zdravljen v Sloveniji:

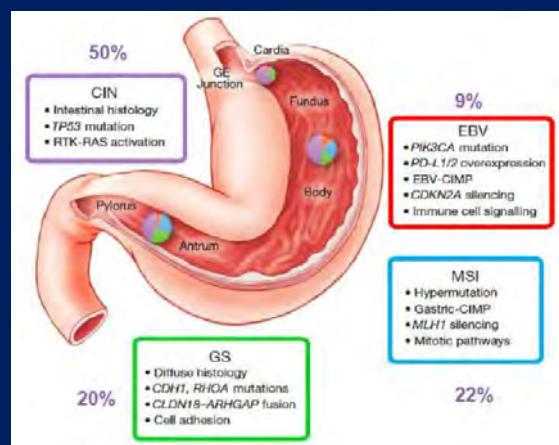

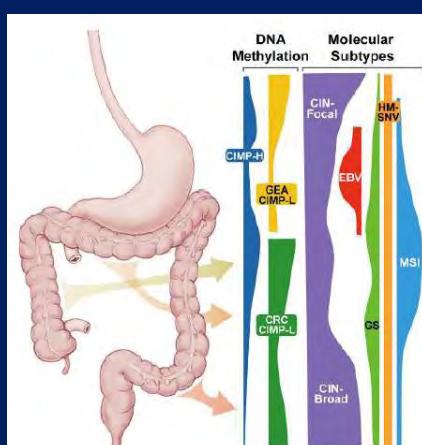

Nadaljuje s pembrolizumabom

PS WHO 1, dela za polni delovni čas

Brez novih toksičnih sopojavov

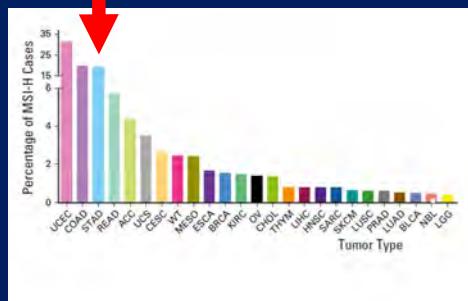

Vztrajanje popolnega odgovora (PET/CT november 2019)

## MOLEKULARNA KLASIFIKACIJA ADENOKARCINOMA ŽELODCA/GEP

Cancer Cell 2018, TCGA Nature 2014

# INCIDENCA MSI-H/dMMR PRI RAKU ŽELODCA

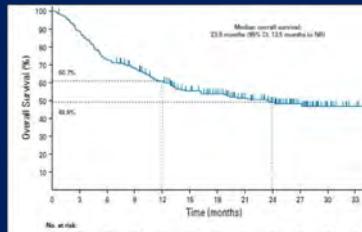

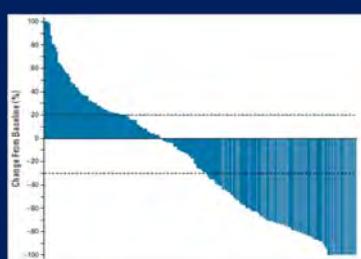

- Med pogostejšimi med vsemi raki (poleg endometrijskega raka in RDČD)
- Omejena oblika: 8-22% (dobra prognoza)
- Razsejana oblika: 7% (slaba prognoza ob standardnem citostatskem zdravljenju)

Bonneville et al. JCO 2017

# UČINKOVITOST PEMBROLIZUMABA PRI MSI-H/dMMR

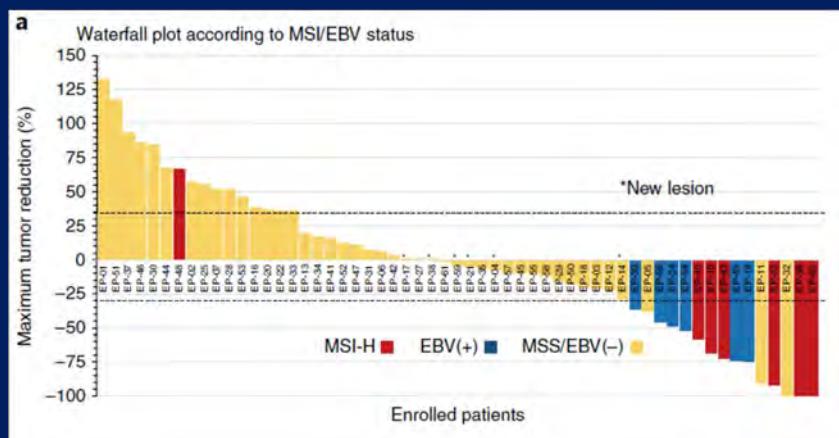

- Tumor-agnostično zdravljenje
- Visok ORR
- Dolgotrajni odgovori
- Dober toksični profil

Tumor Type	No.	CR, No.	PR, No.	ORR, % (95% CI)	Median PFS, Months (95% CI)	Median OS, Months (95% CI)
Gastric	24	4	7	45.8 (25.6 to 67.2)	11.0 (2.1 to NR)	NR (7.2 to NR)
Pancreatic	22	1	3	18.2 (5.2 to 40.3)	2.1 (1.9 to 3.4)	4.0 (2.1 to 9.8)
Small intestine	19	3	5	42.1 (20.3 to 66.5)	9.2 (2.3 to NR)	NR (10.6 to NR)
Ovarian	15	3	2	33.3 (11.8 to 61.6)	2.3 (1.9 to 6.2)	NR (3.8 to NR)
Brain	13	0	0	0.0 (0.0 to 24.7)	1.1 (0.7 to 2.1)	5.6 (1.5 to 16.2)

Marabelle et al. JCO 2019

## MSI-H/dMMR PRI ZDRAVLJENJU RAZSEJANE OBLIKE RAKA ŽELODCA/GEP S PD-1 ZAVIRALCI

Tae Kim et al. Nat Med 2018

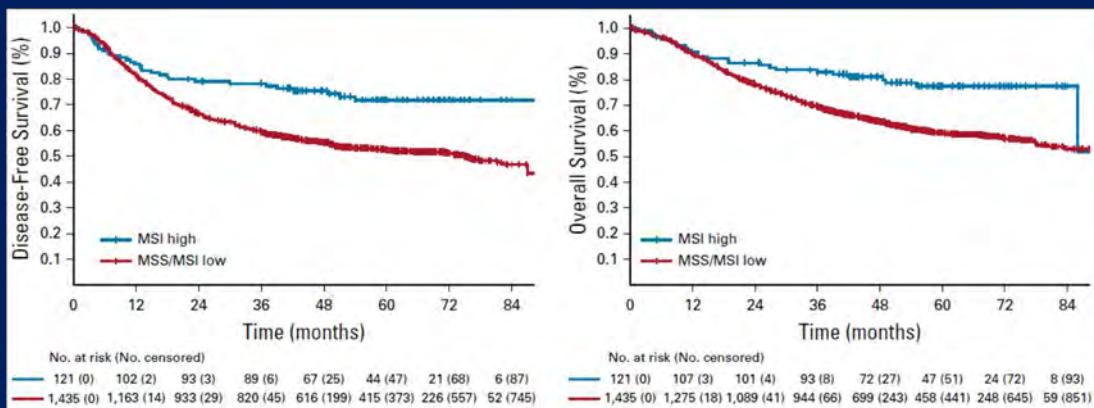

## MSI-H/dMMR PRI RADIKALNEM ZDRAVLJENJU RAKA ŽELODCA/GEP

- Pri RDČD stadij II: negativni prediktivni faktor za korist dopolnilne KT (v Sloveniji presejanje ob diagnozi/resekciji)
- Pri raku želodca do sedaj neznan pomen za dopolnilno zdravljenje
- Meta-analiza štirih mednarodnih randomiziranih študij (MAGIC, CLASSIC, ARTIST, ITACA-s)  
Vključenih 1556 bolnikov, 121 (7.8%) MSI-H

**Individual Patient Data Meta-Analysis of the Value of Microsatellite Instability As a Biomarker in Gastric Cancer**

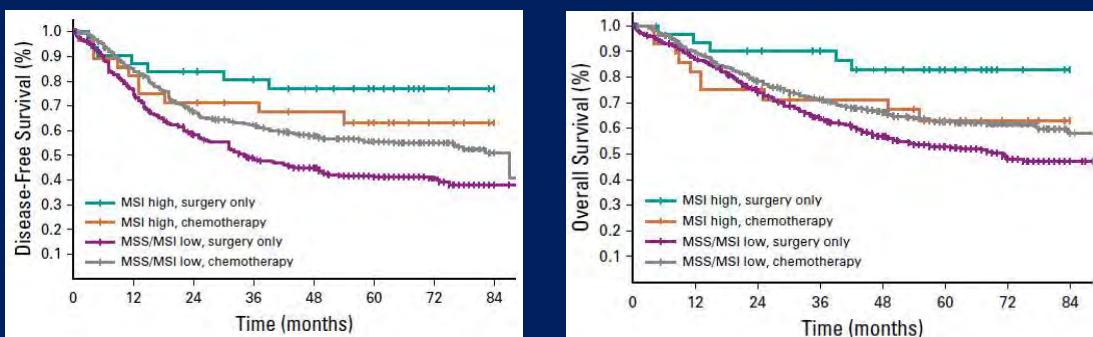

Petrantonio et al. JCO 2019

## MSI-H bolniki imajo značilno boljše preživetje napram MSS bolnikom (HR 1.88 za DFS, HR 1.78 za OS)

Petrantonio et al. JCO 2019

## MSI-H bolniki nimajo koristi od dodatka KT ob kirurški resekciji (-/+ KT: HR 1.45 za 5-letno DFS, HR 2.18 za 5-letni OS)

Petrantonio et al. JCO 2019

## ZAKLJUČKI

- Zdravljenje adenokarcinoma želodca/GEP se nadalje razvija.
- Molekularna klasifikacija postaja pomembna za načrtovanje zdravljenja.
- Optimalno perioperativno zdravljenje še ni dokončno definirano. Studije so v teku, potrebno bi bilo vključiti robustne prognostične markerje (MSI-H/dMMR).
- Imunoterapija je učinkovita za podskupino bolnikov (MSI-H/dMMR, EBV+).

## SORAFENIB PRI BOLNIKIH NEPRIMERNIH ZA TACE OZ REFRAKTORNIH NA TACE

Intermediaren HCC je zelo raznolika skupina bolnikov

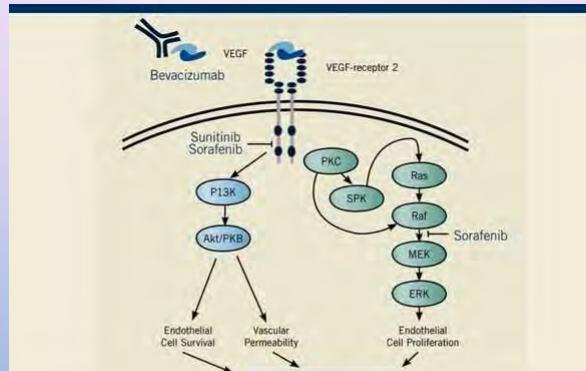

Že izhodiščno niso vsi bolniki primerni za TACE

## SORAFENIB PRI BOLNIKIH NEPRIMERNIH ZA TACE OZ REFRAKTORNIH NA TACE

Učinkovitost sorafenib pri BCLC-B bolnikih,  
ki so neprimerni za TACE ali TACE  
refraktorni (brez odgovora po 2 TACE)

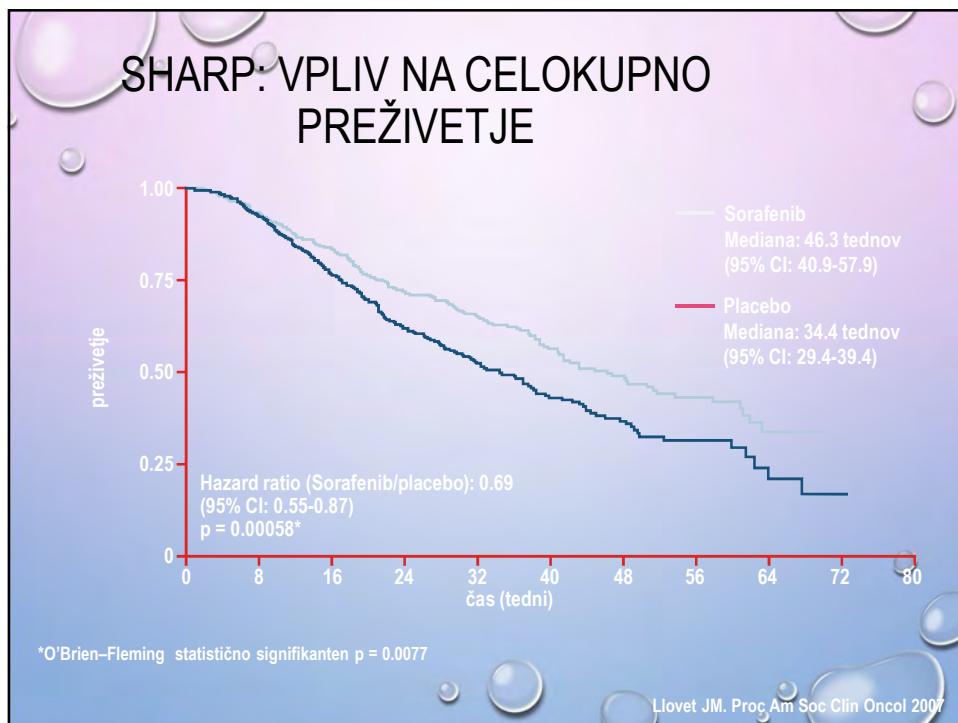

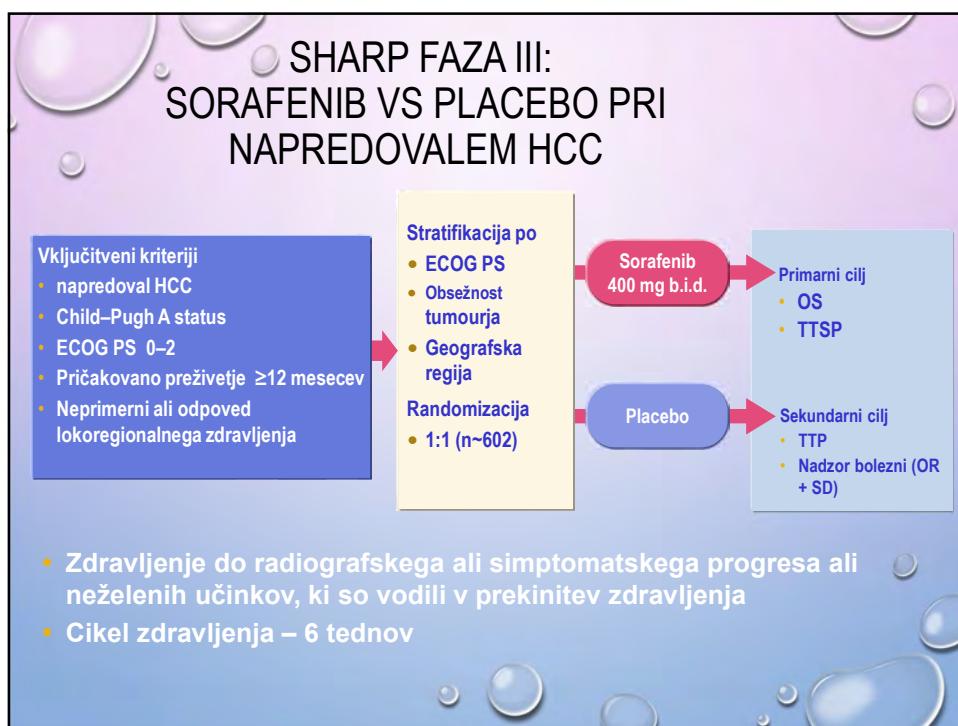

bolnike z poslabšanjem jetrne funkcije ali  
pomembnimi NU po 1. TACE

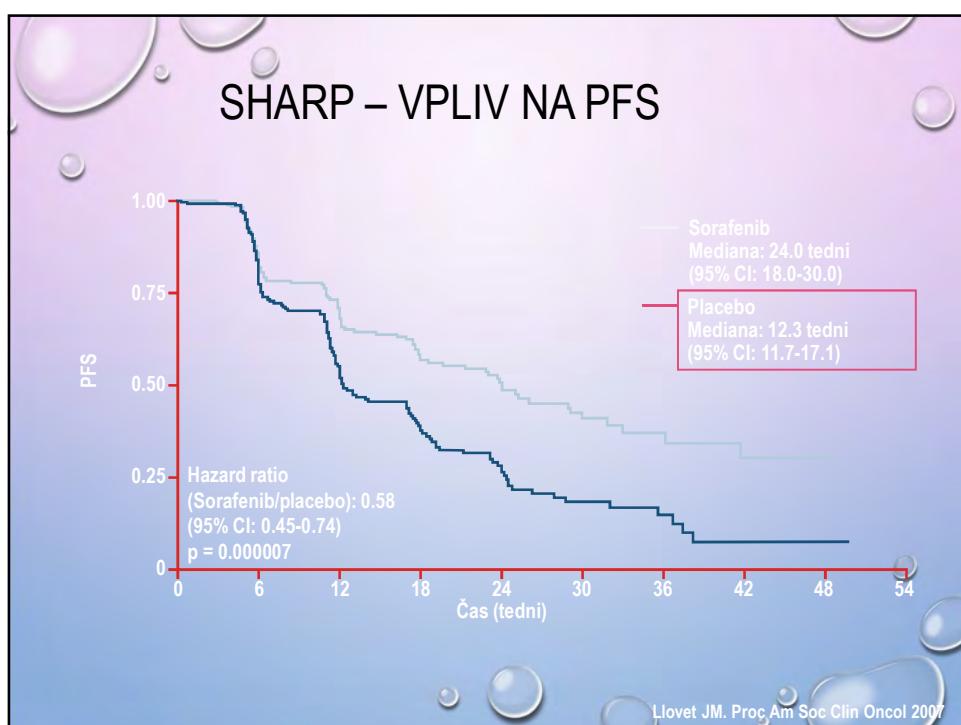

## Sorafenib – mehanizem delovanja

Mechanism of Action of Inhibitors of the VEGF/VEGFR Signaling Pathway

## SORAFENIB PRI HCC

- DO SORAFENIBA JE BILO SISTEMSKO ZDRAVLJENJE HCC SKORAJ NEUČINKOVITO.
- REZULTATI SHARP KAŽEJO, DA SORAFENIB VPLIVA NA PREŽIVETJE NAPREDOVALEGA, NERESEKTABILNEGA HCC.
- SORAFENIB JE PRVO UČINKOVITO SISTEMSKO ZDRAVLJENJE, NAPREDOVALEGA NERESEKTABILNEGA HCC
- ADJUVANTO (POST-RESEKCIJSKO ALI POST-ABLATIVNO ZDR.) V FAZI RAZISKOVANJA

## REZULTATI SHARP IN VSAKODNEVNE UPORABE SORAFENIBA PRI INTERMEDIARNEM HCC

### SHARP<sup>1</sup> BCLC-B subgroup

- Increased OS and TTP with sorafenib (n=54) vs placebo (n=51)
  - Median OS: 14.5 vs 11.4 months (HR: 0.72; 95% CI: 0.38–1.38)
  - Median TTP: 6.9 vs 4.4 months (HR: 0.47; 95% CI: 0.23–0.96)

### SHARP<sup>1</sup> previous TACE subgroup

- Increased OS and TTP with sorafenib (n=86) vs placebo (n=90)
  - Median OS: 11.9 vs 9.9 months (HR: 0.75; 95% CI: 0.49–1.14)
  - Median TTP: 5.8 vs 4.0 months (HR: 0.57; 95% CI: 0.36–0.91)

### SOFIA<sup>2</sup>

- Good efficacy demonstrated in BCLC-B HCC
  - Longer survival in BCLC-B vs BCLC-C patients: 20.6 vs 8.4 months

### INSIGHT<sup>3</sup>

- Good efficacy demonstrated in BCLC-B HCC
  - Longer survival in BCLC-B vs BCLC-C patients: 19.6 vs 14.5 months

### GIDEON interim analysis<sup>4</sup>

- Similar safety profile for sorafenib across BCLC stages

## RESORCE Trial Design

Clinicaltrials.gov NCT01774344

- HCC patients with documented radiological progression during sorafenib treatment

- Stratified by:
  - Geographic region (Asia vs ROW)
  - Macrovascular invasion
  - Extrahepatic disease
  - ECOG PS (0 vs 1)
  - AFP (<400 ng/mL vs ≥400 ng/mL)

Regorafenib  
160 mg po once daily  
3 weeks on / 1 week off  
(4-week cycle)  
(n=379)

N= 573

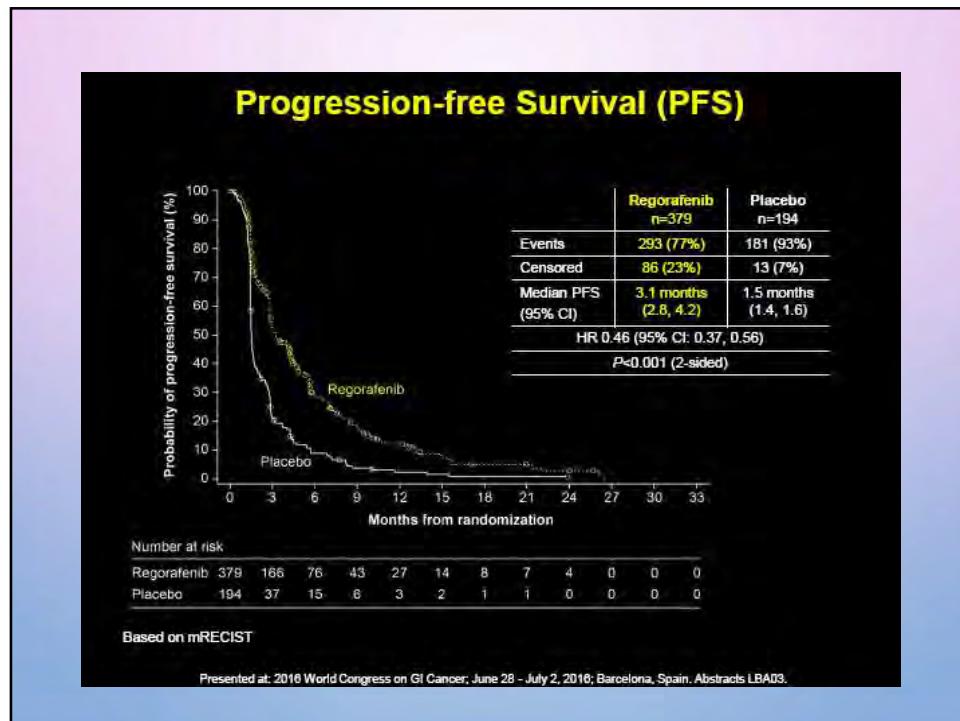

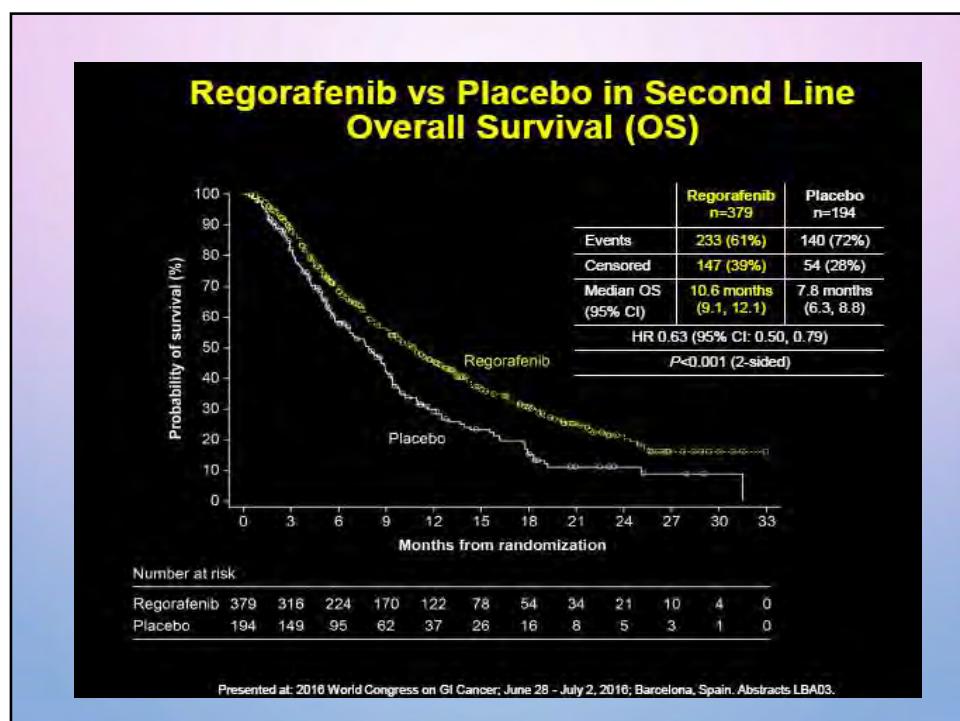

Placebo  
(n=194)

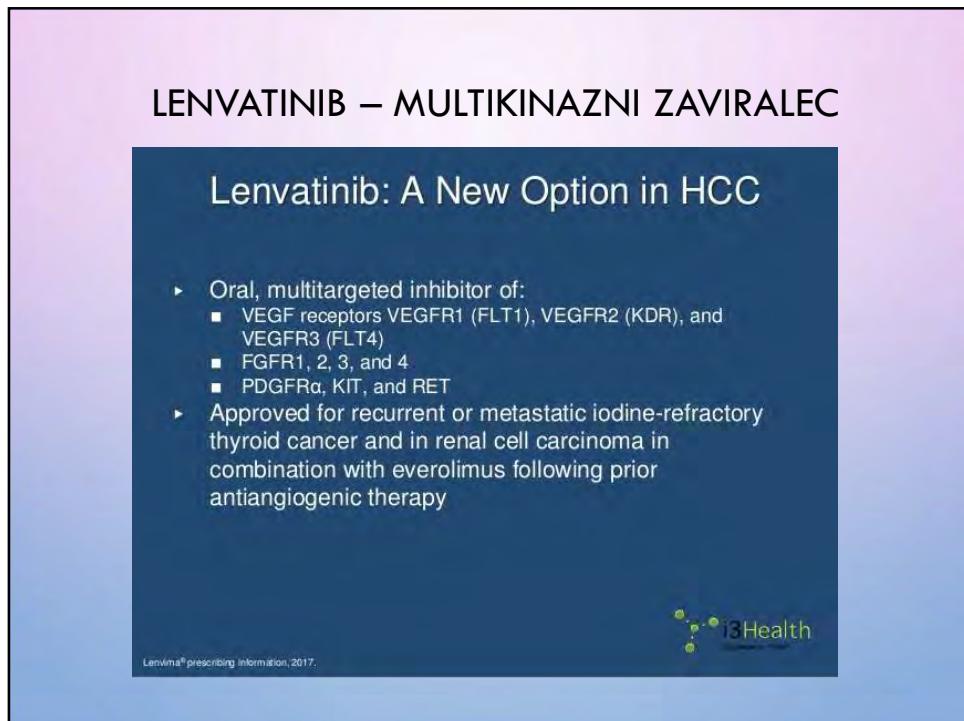

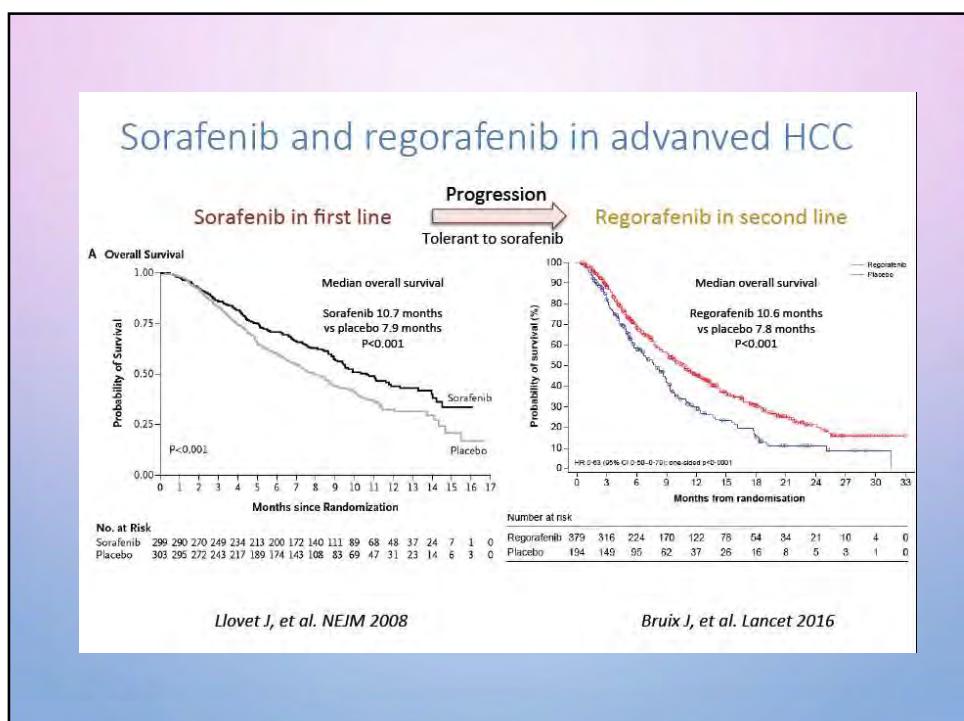

R  
2:1

- 152 centers in 21 countries in North and South America, Europe, Australia, Asia
- All patients received best supportive care
- Treat until progression, unacceptable toxicity, or withdrawal

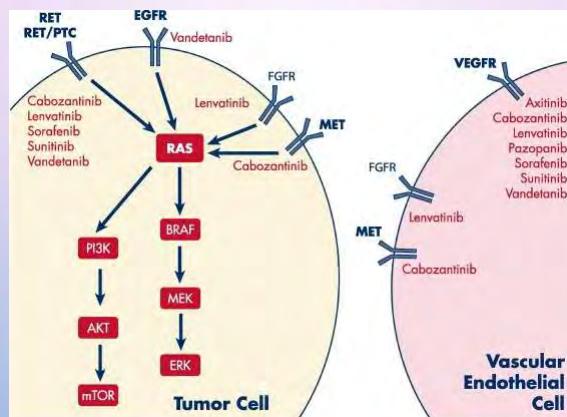

ROW, rest of the world; ECOG PS, Eastern Cooperative Oncology Group performance status; AFP, alpha-fetoprotein

Presented at: 2016 World Congress on GI Cancer, June 28 - July 2, 2016; Barcelona, Spain. Abstracts LBA03.

## LENVATINIB – MEHANIZEM DELOVANJA

LENVATINIB: ROLE IN THYROID CANCER AND OTHER SOLID TUMORS; MARIA E CABANILLAS MOHAMMED AMIRHABRA. CANCER TREATMENT REVIEWS. VOLUME 42, JANUARY 2016, PAGES 47-55

## REFLECT ŠTUDIJA

### REFLECT Phase III: Lenvatinib vs Sorafenib as First-Line Therapy

#### Eligibility

- Unresectable HCC with no prior treatment
- ECOG PS 0 or 1
- BCLC stage B or C
- Child-Pugh A
- Age  $\geq 18$  years

#### Study Design

- Open-label, randomized NI study
- Primary end point: OS
- Secondary end points: PFS, TTP

Lenvatinib 8 or 12 mg daily based on body weight; 8 mg for  $<60$  kg (n=478)

954 pts randomly assigned 1:1 to detect NI in OS

Sorafenib 400 mg twice daily (n=476)

R  
A  
N  
D  
O  
M  
I  
Z  
E

NI = noninferiority; PFS = progression-free survival.  
Cheng et al. 2017.

## REFLECT - REZULTATI

### REFLECT: Outcomes

Outcomes	Lenvatinib	Sorafenib	HR
Median OS, mo (95% CI)	13.6 (12.1-14.9)	12.3 (10.4-13.9)	0.92 (0.79-1.06)
Median PFS, mo (95% CI)	7.4 (6.9-8.8)	3.7 (3.6-4.6)	0.66 (0.57-0.77)
Median TTP, mo (95% CI)	8.9 (7.4-9.2)	3.7 (3.6-5.4)	0.63 (0.53-0.73)
ORR, n (%)	115 (24%)	44 (9%)	

ORR = overall response rate.

Cheng et al, 2017

## REFLECT - AEF

### REFLECT: Treatment-Emergent AEs

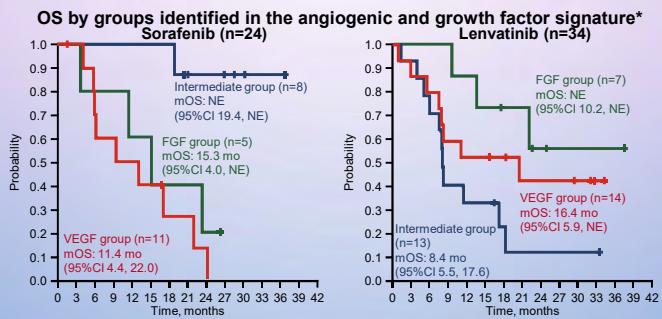

- ▶ Grade 3 and higher events were more common in the lenvatinib arm (57% vs 49%)
- ▶ Most common AEs in the lenvatinib arm:
  - Hypertension (42% overall with 23% grade  $\geq 3$ )
  - Diarrhea (39%)
  - Decreased appetite (34%)
  - Weight loss (31% with 8% grade  $\geq 3$ )
  - Fatigue (30%)
- ▶ Grade 3 HFSR was more common in the sorafenib arm (11% vs 3%)

Cheng et al, 2017

**ANALIZA SERUMSKIH BIOMARKERJEV - LENVATINIB (LEN) VS SORAFENIB (SOR)  
V PRVEM REDU ZDRAVLJENJA NERESEKTABILNEGA HCC**

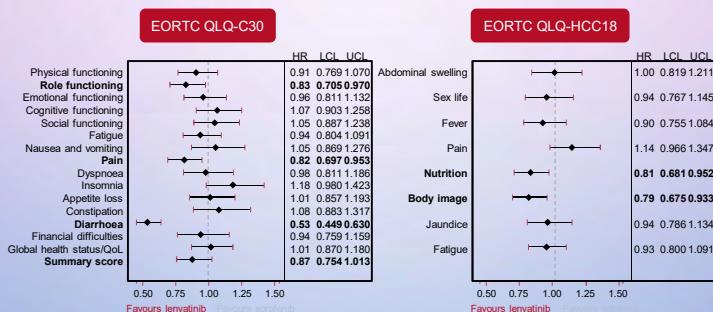

ITT population	Lenvatinib	Sorafenib	HR (95%CI)
mOS, months (95%CI)	13.6 (12.1, 14.9)	12.3 (10.4, 13.9)	0.92 (0.79, 1.06)

**KVALITETA ŽIVLJENJA (HRQOL) IN KONTROLA SIMPTOMOV BOLEZNI - LENVATINIB (LEN) VS SORAFENIB (SOR) V PRVEM REDU ZDRAVLJENJA NERESEKTABILNEGA HCC**

VOGEL A, ET AL. ANN ONCOL 2017;28(SUPPL 5):ABSTR 6180

## ZAKLJUČKI

- PRVA USPEŠNA ŠTUDIJA PO SHARP
- LENVATINIB NI INFERIOREN VS SORAFENIB
- LENVATINIB - VEGF IN FGF GROUP > OS
- LENVATINIB > ČAS DO UPADA FUNKCIJ VITALNIH ORGANOV, NUTRICIJE, DIAREJE IN BOLEČINE

## REACH – RAMUCIRUMAB V DRUGEM REDU ZDRAVLJENJA HCC

LBA16: Ramucirumab (RAM) as second-line treatment in patients (pts) with advanced hepatocellular carcinoma (HCC) following first-line therapy with sorafenib: Results from the randomized phase III REACH study – Zhu A et al.

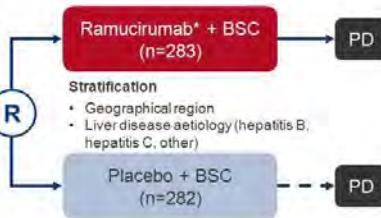

• Study objective

- To assess the efficacy and safety of ramucirumab after first-line treatment with sorafenib in patients with advanced HCC

Patients with advanced HCC

- Prior sorafenib
- BCLC stage B/C
- Child-Pugh A
- ECOG PS 0 or 1

(n=644)

Primary endpoint

- OS

Secondary endpoints

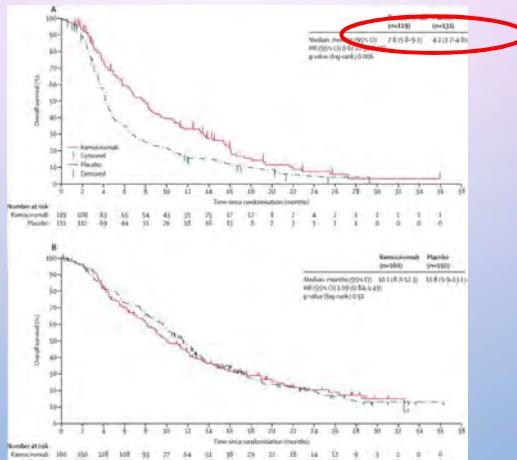

- PFS, TTP, ORR
- Safety, patient-reported outcomes

\*8mg/kg, q2w per cycle

Zhu et al. Ann Oncol 2014; 25 (suppl 4): abstr LBA16

## REZULTATI

- RAMUCIRUMAB V DRUGEM REDU ZDRAVLJENJA HCC NI IZKAZAL IZBOLJŠANJA OS. OPAZEN JE BIL UČINEK NA PFS, TTP IN ORR.
- RAZEN:

## NIVOLUMAB VS SORAFENIB

### CheckMate-459: Nivolumab vs Sorafenib as First-line Treatment in Advanced HCC

- Randomized, open-label, multicenter phase III trial

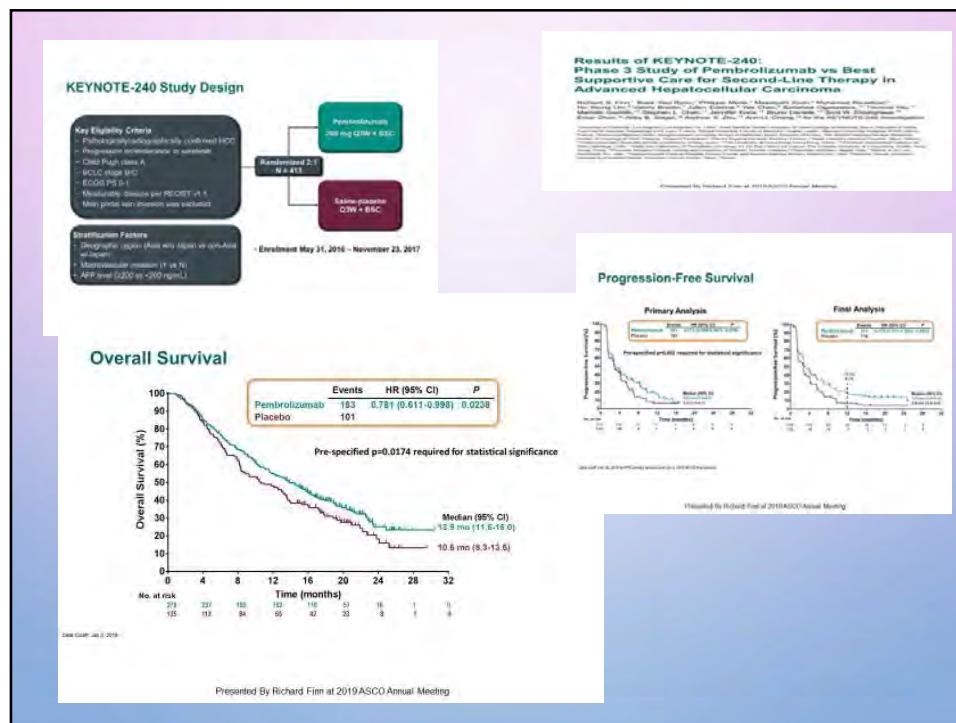

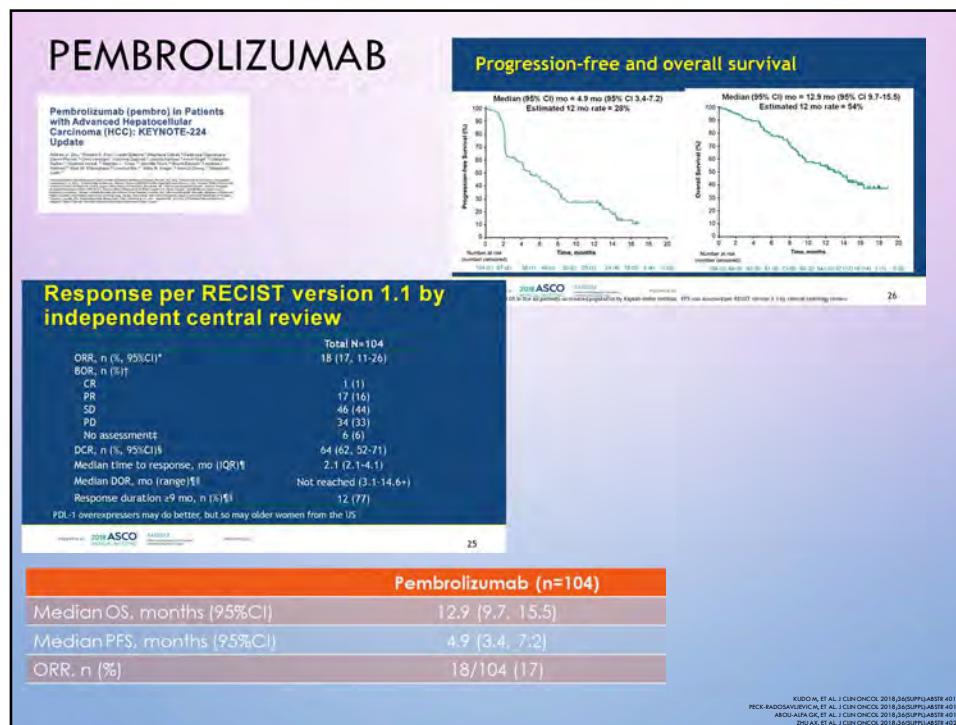

*Stratified by etiology, vascular invasion and/or extrahepatic spread, and geography*

- Primary endpoint: time to progression, OS
- Secondary endpoints: ORR, PFS, PD-L1 expression

Sangro B, et al. ASCO 2016. Abstract TPS4147.  
ClinicalTrials.gov NCT02576509.

Slide credit: [clinicaloptions.com](http://clinicaloptions.com)

## Key Takeaways

- Sorafenib and regorafenib are the only agents approved for advanced HCC
  - Both are multikinase inhibitors with prominent antiangiogenic effects
  - Sorafenib is approved for first-line treatment
  - Regorafenib is approved for second-line treatment after sorafenib failure or intolerance
- In a head-to-head phase III trial, lenvatinib was shown to be noninferior to sorafenib and may be considered an alternative to sorafenib, particularly in patients with intolerance
- Important to recognize the class-wide side effects of these agents (eg, hand-foot skin reaction, hypertension, diarrhea, weight loss) and employ timely interventions to optimize treatment outcomes

## HCC - DRUGI RED ZDRAVLJENJA

### Landscape-Second line therapy for HCC

# VLOGA KIRURGA PRI ZDRAVLJENJU BOLNIKOV s HCC

22.11.2019, OI, 9. Šola tumorjev prebavil

1

J Cancer Res Clin Oncol (2009) 135:1067–1072  
DOI 10.1007/s00432-009-0546-z

ORIGINAL PAPER

## Twenty-year survivors after resection for hepatocellular carcinoma-analysis of 53 cases

Xin-Da Zhou · Zhao-You Tang · Zeng-Chen Ma ·

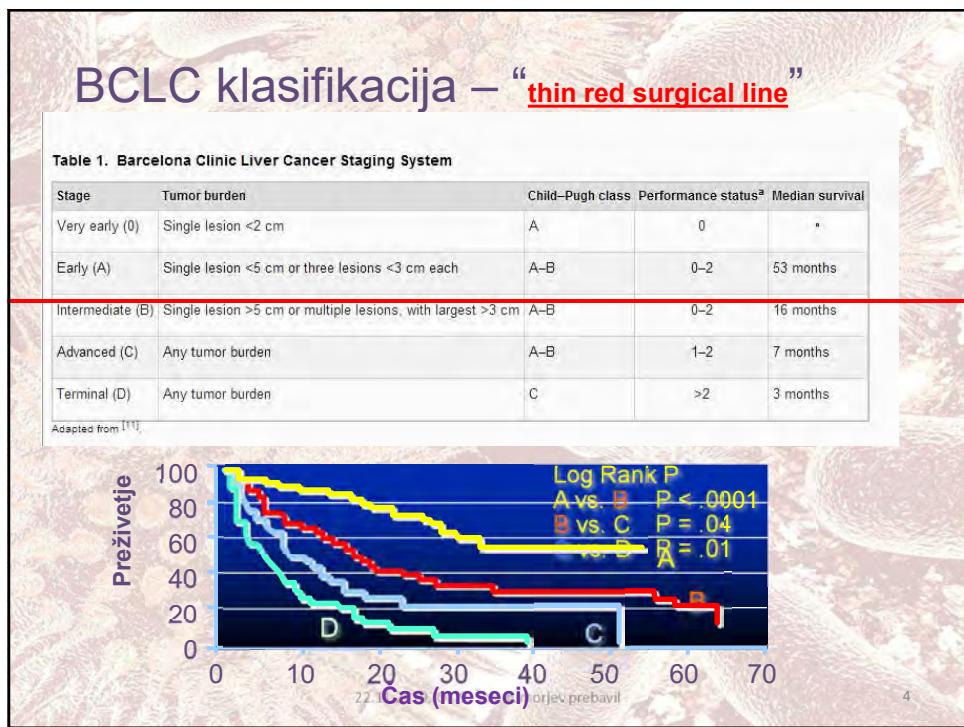

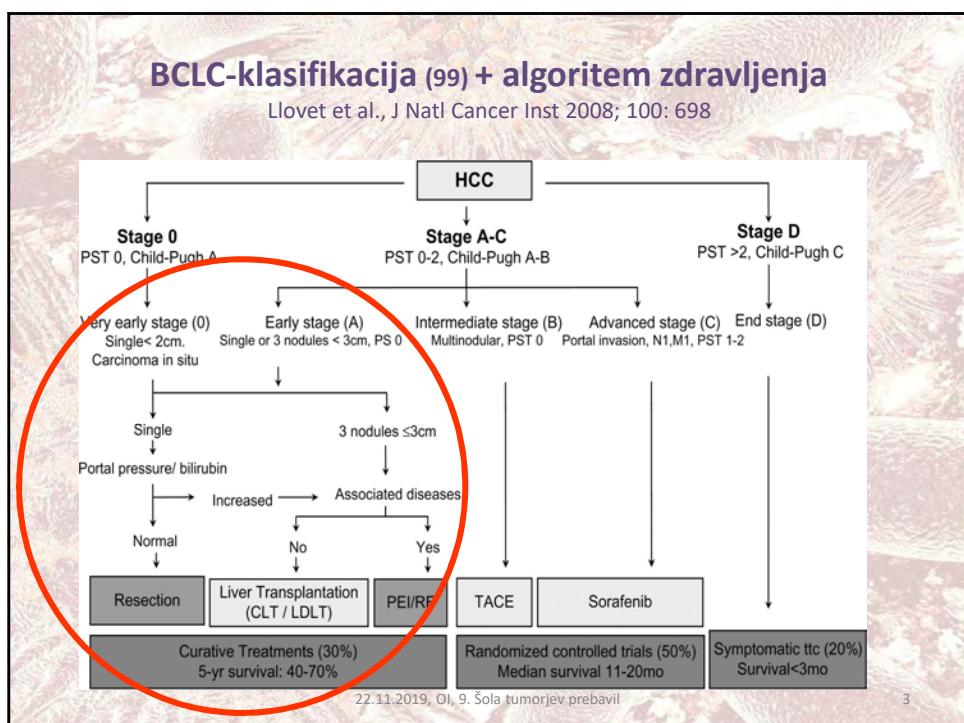

“These results may indicate that early detection and curative resection are the principal factors influencing long-term survival;

Reresection for subclinical recurrence and solitary metastasis remains an important approach towards further survival prolongation after curative resection.”

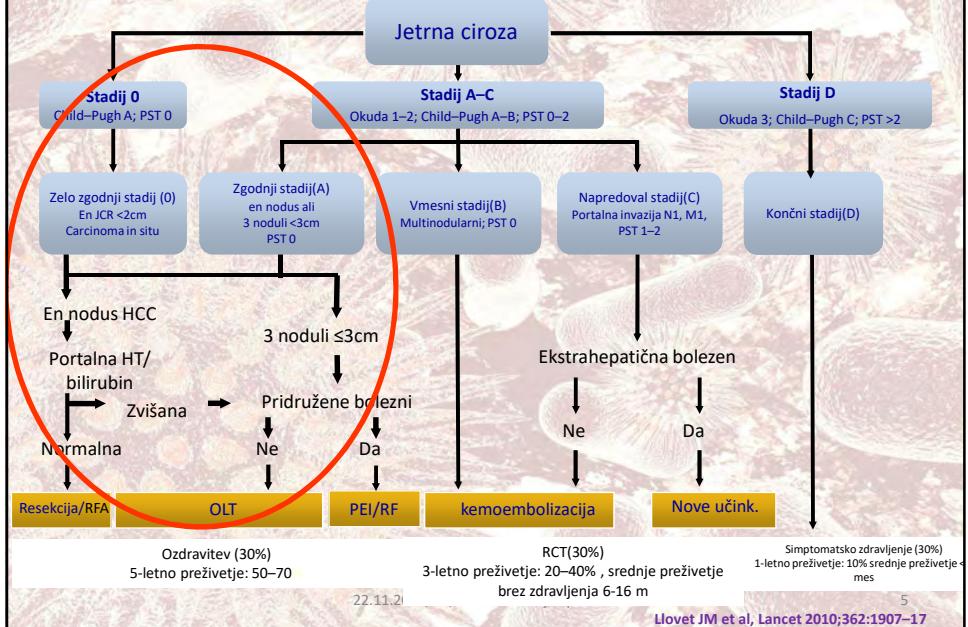

In summary, our data showed that for patients with early stage HCC and underwent curative resection, long-term survival after resection could be expected. However, because tumor recurrence is common, postoperative follow-up is important and should continue for the remainder of the patient's life. Finally, aggressive therapy for recurrence, including reresection when necessary, is recommended.

22.11.2019, OI, 9. Šola tumorjev prebavil

2

## BCLC - sistem in strategija zdravljenja

## Uvod

- RO Resekcija ( $\approx 50\%$ ) in OPJ ( $\approx 75\%$ ) omogočata 5- letno preživetje bolnikom s HCC.
- Samo 20-40% bolnikov je kandidatov za kurativno zdravljenje.
  - Obseg in število tumorjev
  - Širjenje izven jeter
  - Obseg osnovne jetrne bolezni (90% HCC).

# RESEKCIJE

- Število resekcijs narašča:
  - Izboljšanje slikovnih tehnik
  - Napredek v kirurških tehnikah
  - Izboljšanje pred in pooperativne oskrbe

22.11.2019, OI, 9. Šola tumorjev prebavil

7

## Okvirni kriteriji za resekcijo ob kronični okvari jeter

Resekcija	Dejavniki
Manjša	C-P A
	Bilirubin < 35 µmol/L
	Ø ascitesa
	Trombociti >100x10 <sup>3</sup> /mm <sup>3</sup>
Večja	Bilirubin < 17 µmol/L (Ø↑)
	Ø portalne hipertenzije
	FLR > 40% sicer PE
	C-P A, Ø ascitesa, Tr >100x10 <sup>3</sup> /mm <sup>3</sup>

22.11.2019, OI, 9. Šola tumorjev prebavil

8

## Izbor bolnikov

- Pomemben za optimalne rezultate po resekciiji:
  - Obolevnost
  - Umrljivost
  - Dolgoročno preživetje
- Ocena:
  - Splošno stanje
  - Obseg tumorja
  - Stadij tumorja
  - Jetrna funkcija
  - $V_{FLR}$

22.11.2019, OI, 9. Šola tumorjev prebavil

9

## Izbor bolnikov

- Spremljajoče bolezni so NND umrljivosti ob večjih resekcijah, neodvisno od starosti.
- ASA>1 – tvegani posegi
- Tveganje ni opravičljivo ob:
  - Srčnem popuščanju
  - KOPB
  - KLO

Wei AC, Tung-Ping Poon R, Fan ST, Wong J (2003) Risk factors for perioperative morbidity and mortality after extended hepatectomy for hepatocellular carcinoma. Br J Surg 90:33–41

Belghiti J, Hiramatsu K, Benoit S, Massault P, Sauvanet A, Farges O (2000) Seven hundred forty-seven hepatectomies in the 1990s: an update to evaluate the actual risk of liver resection. J Am Coll Surg 191:38–46

22.11.2019, OI, 9. Šola tumorjev prebavil

10

## Ocena tumorja

- MS-CT, MRI.... Na osnovi slikovnih metod
- Resekcija DA:
  - Možna R0 resekcija
  - Zadosten FLR
- Resekcija NE:
  - Širjenje izven jeter
  - Obsežni tumorski trombi v VCI
  - Zajetost AHC ali debla VP
  - **Invazivna rast v okolico npr. prepono, NI kontrindikacija če dosežemo R0**

22.11.2019, OI, 9. Šola tumorjev prebavil

11

## Velikost tumorja

- Brez presejalnih programov >50% HCC na Zahodu v napredovalih stadijih.
  - ( $T>10$  cm, multipli, ↑↑ $\alpha$ FP, ruptura, trombi)
- Tudi take resekcije so varne!
  - 300, MR 5% - 30d  
Pawlik TM, Poon RT, Abdalla EK et al (2005) Critical appraisal of the clinical and pathologic predictors of survival after resection of large hepatocellular carcinoma. Arch Surg 140:450-457  
– 5-letno preživetje 27-73%.
- Resekcija je edina možnost!
  - OPJ in RFA ne
  - TACE + EPV- downsize/downstage

22.11.2019, OI, 9. Šola tumorjev prebavil

12

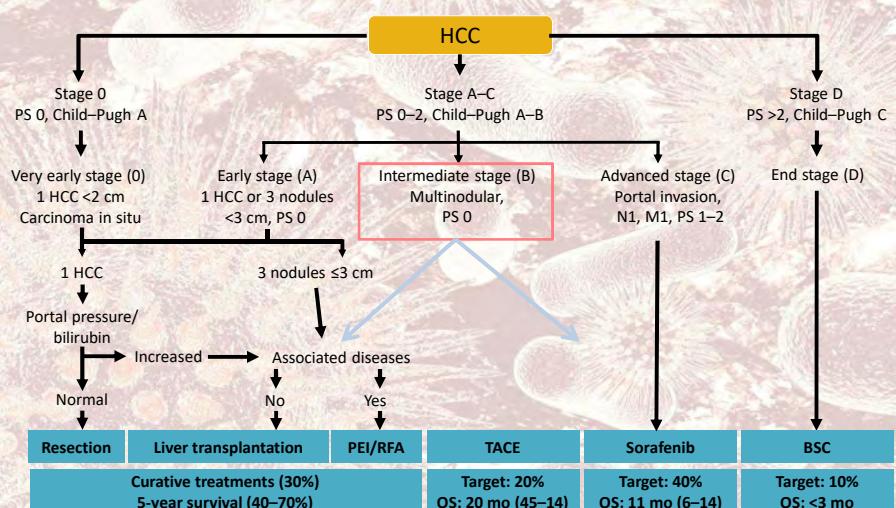

## Multinodular tumorja

- Med seboj neodvisni
- Napredoval stadij z jetrnimi zasevki
- Resekcija močno??
- 380/ B-BCLC/ MR 2,4% / 5-I 39%
- Ng KK, Vauthay JN, Pawlik TM et al (2005) Is hepatic resection for large or multinodular hepatocellular carcinoma justified? Results from a multi-institutional database. Ann Surg Oncol 12:364–373
- Liu CL, Fan ST, Lo CM, Ng IO, Poon RT, Wong J (2003) Hepatic resection for bilobar hepatocellular carcinoma: is it justified? Arch Surg 138:100–104
- R0 možna ob  $V_{FLR}$  – ena od možnosti

22.11.2019, OI, 9. Šola tumorjev prebavil

13

## Downstaging

BCC, best supportive care; EASL, European Association for the Study of the Liver; EORTC, European Organisation for Research and Treatment of Cancer; mo, months; PEI, percutaneous ethanol injection; OLT, orthotopic liver transplantation; OS, overall survival; PS, performance status; RFA, radiofrequency ablation; TACE, transarterial chemoembolization  
22.11.2019, OI, 9. Šola tumorjev prebavil  
EASL-EORTC Clinical Practice Guidelines: Management of hepatocellular carcinoma. J Hepatol 2012;56:908–43.

14

## Zajetje PV in HV

- Kirurški in onkološki izziv
- Resekcija izboljša preživetje
- HV in PV 102/ 5-I 23%

Pawlak TM, Poon RT, Abdalla EK et al (2005) Hepatectomy for hepatocellular carcinoma with major portal or hepatic vein invasion: results of a multicenter study. *Surgery* 137: 403-410

- PV 23/42%

Minagawa M, Makuuchi M, Takayama T, Ohtomo K (2001) Selection criteria for hepatectomy in patients with hepatocellular carcinoma and portal vein tumor thrombus. *Ann Surg* 233:379-384

22.11.2019, OI, 9. Šola tumorjev prebavil

15

## Neuspeh resekcjskega zdravljenja recidiv

- 70-100% po 5 I
- 80-90% zgodnji
  - Vaskularna invazija – microsateliti
- 10-20% pozni
  - Novi primarni v cirozi
- Reresekcija smiselna, ko je možna, odvisna od:
  - F jeter, vzorca ponovitve, obsega 1. resekcijs
  - MR 0-8%, 5-I/50-70%.

22.11.2019, OI, 9. Šola tumorjev prebavil

16

## Ocena jetrne funkcije

- C-P MR A-10%, B-32%, C-82%.
- PH > 10mm Hg NND dekompenzacije po op
  - Pooperativno: krvavitve iz varic, sepsa, jetrna odpoved
  - Splenomegalija, IA in esophagealne varice, Tr <100x10<sup>3</sup>/mm<sup>3</sup> so kontraindikacija za op.
- Ciroza + aktivni hepatitis ↑MR 6x
  - 2x↑[ALT], [bilirubin] > 35 µmol/L ≠ OP

Bruix J, Castells A, Bosch J et al (1996) Surgical resection of hepatocellular carcinoma in cirrhotic patients: prognostic value of preoperative portal pressure. Gastroenterology 111:1018–1122

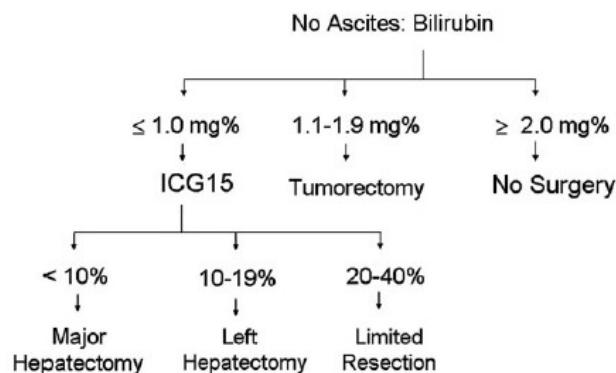

Noun R, Jagot P, Farges O, Sauvanet A, Belghiti J (1997) High preoperative serum alanine transferase levels: effect on the risk of liver resection in Child grade A cirrhotic patients. World J Surg 21:390–394

22.11.2019, OI, 9. Šola tumorjev prebavil

17

## Ocena jetrne funkcije

- LIMON – očistek indocyanine zelene (ICG)
  - Japonski algoritem – MR 0%

22.11.2019, OI, 9. Šola tumorjev prebavil

18

## OCENA V<sub>FLR</sub>

- CT- 3D volumetrija
- V<sub>FLR</sub> 20% = min necrotična jetra
- V<sub>FLR</sub> 40% = min ciroza ali hepatitis
- %TLV = Izmerjen V<sub>FLR</sub> / TLV (BSAx Konst)

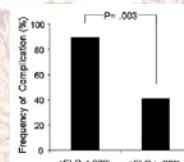

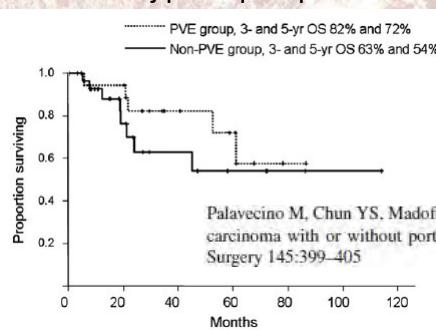

22.11.2019, OI, 9. Šola tumorjev prebavil

19

## Predoperativna priprava

- EPV - ↑V<sub>FLR</sub>
  - malo zapletov < 5%, ↑V, ↑očistek ICG
  - Manj postop. zapletov in krajsa hospitalizacija

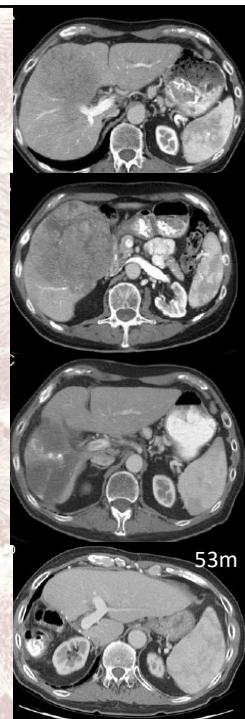

22.11.2019, OI, 9. Šola tumorjev prebavil

20

## Predoperativna priprava

- EPV ↑ pretok po HA, ki prehranjuje HCC
- EPV + TACE
  - Podaljša interval brez bolezni
  - Poveča hipertrofijo FLR
  - Nekroza 60-80% tumorja
- SORAFENIB – neoadjuvantno??
- PIAF (*cisplatin, interferon adriamycin, 5-FU*)
  - Poveča resektabilnost??

22.11.2019, OI, 9. Šola tumorjev prebavil

## Kirurška tehnika

- Anatomske resekcije
- Pringle, totalna ekskluzija, ex vivo
- CVP 0-5
- Anteriorni pristop
- Liver hanging” maneuver

HPB, 2006; 8: 35–37

Liver hanging maneuver for right hemiliver *in situ* donation – anatomical considerations

B. TROTOVŠEK<sup>1</sup>, E. M. GADŽIJEV<sup>2</sup>, D. RAVNIK<sup>3</sup> & M. HRIBERNIK<sup>3</sup>

22.11.2019, OI, 9. Šola tumorjev prebavil

22

## Anatomske resekcije

- HCC se širi hematogeno
  - Najprej po portalni veni - intrahepatalne meta
  - Kasneje po venah izven jeter (pljuča, kosti, suprarenalka)
- Anatomska resekcija je NND preživetja in intervala brez bolezni.
- Varnostni rob je manj pomemben kot mikrozasevki – segmentne resekcije!!

22.11.2019, OI, 9. Šola tumorjev prebavil

23

## Preprečevanje krvavitve

- Predoperativna priprava
- Kirurška tehnika
- Nizek CVP
- Velika izguba krvi je NND:
  - Zapletov
  - Smrtnosti
- Transfuzija KE
  - ↑koagulopatij
  - Imunosupresija – zgodnji recidivi – krajše preživetje

22.11.2019, OI, 9. Šola tumorjev prebavil

24

## Preprečevanje krvavitve

- Pringle 15/5 varnejši pri cirozi
  - (varno do 80min) Belghiti J, Noun R, Malafosse R et al (1999) Continuous versus intermittent portal triad clamping for liver resection: a controlled study. Ann Surg 229:369–375
- TVE enako učinkovit kot Pringle – več zapletov
- Nizek CVP ↓ krvavitev iz HV
- Sodobne tehnike preparacije
  - CUSA, HS, LigaSure, RF elektroda
- Dreni

22.11.2019, OI, 9. Šola tumorjev prebavil

25

## Rezultati - pooperativni

- Danes sprejemljiva MR < 5%
- Zapleti v 25-50%
  - Bilomi (5%), krvavitve, abscesi, jetrna insuficienca....
  - Krvavitev = NND postoperativne umrljivosti
  - Pringle >80 min = NND manjših zapletov in obolevnosti

22.11.2019, OI, 9. Šola tumorjev prebavil

26

## Rezultati - dolgoročni

- ↑ preživetja na 30-50%
  - Zgodnejše odkrivanje
  - Boljši izbor bolnikov
  - Boljša kirurška oskrba
- Z resekcijo težko rešljiva težava so recidivi
- Napovedni dejavniki preživetja (register 5800 p)
  - Zajetost PV
  - Število tumorjev
  - αFP
  - Velikost tumorja
  - Stadij ciroze
  - Starost
  - R0 resekcija

22.11.2019, OI, 9. Šola tumorjev prebavil

27

## Fibrolamelarni HCC

- 5-15%HCC
- Mlajši bolniki (20-30l), necirotična jetra
- Enojni tumorji, vendar veliki
- Neresektabilni srednje preživetje 14m – 2x ↑HCC
- 30% limfogeni zasevki -? Limfadenektomije
- Resektabilnost 58%, 5-l preživetje 56%

Hemming AW, Langer B, Sheiner P, Greig PD, Taylor BR (1997) Aggressive surgical management of fibrolamellar hepatocellular carcinoma. J Gastrointest Surg. 1:342–346

22.11.2019, OI, 9. Šola tumorjev prebavil

28

## Fibrolamelarni HCC

- OPJ ni metoda izbora za te bolnike
- Resekcija/ OPJ po 5 letih 75%/36%

Pinna AD, Iwatsuki S, Lee RG et al (1997) Treatment of fibrolamellar hepatoma with subtotal hepatectomy or transplantation. Hepatology 26(4):877–883

Neuhau P, Jonas S, Bechstein WO (2000) Hepatoma of the liver—resection or transplantation? Langenbecks Arch Surg. 385:171–178

22.11.2019, OI, 9. Šola tumorjev prebavil

29

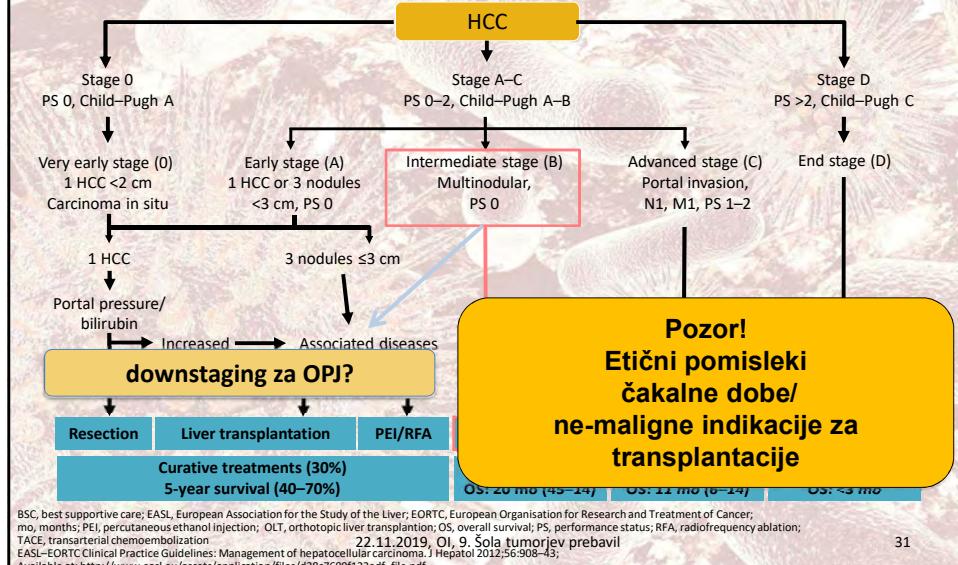

## Resekcija kot most do OPJ

- Resekcija pri bolnikih s HCC, ki čakajo na presaditev, lahko ob progresu bolezni bolnika ponovno vrne na listo čakajočih.
- Resekcijo za “bridging” uporabimo samo pri bolnikih z ohranjenim delovanjem jeter.
- Rezultati OPJ po predhodni resekciji so enako dobri.

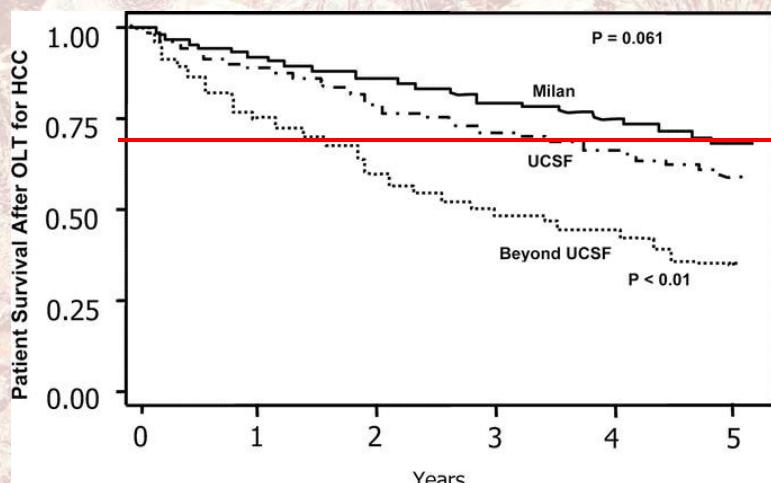

22.11.2019, OI, 9. Šola tumorjev prebavil

30

## Prehajajoča (migracijska) terapija - downstaging

## HCC in OPJ

22.11.2019, OI, 9. Šola tumorjev prebavil

32

## HCC in OPJ

- Milanski kriteriji 1 <5cm, 3 <3cm (ET in SLO)
- UCSF kriteriji 1< 6.5cm, 3 < skupaj od 8cm  
največji < 4,5cm
- “Razširjeni Milanski kriteriji 1 <5cm, 3< skupaj od 7cm”

Mazzaffer V, Regalia E, Doci R et al (1996) Liver transplantation for the treatment of small hepatocellular carcinomas in patients with cirrhosis. N Engl J Med 334:693–699

22.11.2019, OI, 9. Šola tumorjev prebavil

33

## HCC in OPJ

- 5-l preživetje ≈ 70% je slabše kot pri bolnikih z nemalignimi boleznimi,
- HCV okužba in HCC – po OPJ preživetje presadka in bolnika je določal HCV in ne HCC, danes ne več.
- 10% recidivov po 5 l

22.11.2019, OI, 9. Šola tumorjev prebavil

34

## 3 DILEME pri HCC

- Pacienti s Child Pough A and solitarnim HCC
- Milanski kriterij
- Bridging in downstaging

22.11.2019, OI, 9. Šola tumorjev prebavil

35

## Pacienti s Child Pough A in solitarnim HCC

- Resekcija (brez PH)
- Lokalne ablativne tehnike (pri PH)
- Transplantacija
  - Najnižja stopnja ponovitev HCC
  - Enako 1L in boljše 3 in 5L preživetje (dropoff)
  - PRECENJENO PREŽIVETJE
- Rezultati le pri presajenih in ne vseh na čakalni listi.

22.11.2019, OI, 9. Šola tumorjev prebavil

36

## Pacienti s Child Pough A in solitarnim HCC

- MELD je močan napovedni dejavnik preživetja na čakalni listi za OPJ ali resekcijsko.
- 5-L preživetje po resekciji (67%) in MELD < 10 in 47% pri tistih z MELD ≥10.
  - OPJ boljše preživetje MELD > 10 in tu z mikrovaskularno invazijo.
- OPJ je drago zdravljenje.
  - Cost efficient samo če je 5-L preživetje > 87.6%.

22.11.2019, OI, 9. Šola tumorjev prebavil

37

## Pacienti s Child Pough A in solitarnim HCC

- Resekcija in ablacija sta prvi liniji zdravljenja in stroškovno učinkoviti.
- Ob ponovitvi HCC - “salvage LT”.
- Salvage LT dobro OS: 3 and 5-L 80 in 62%.

22.11.2019, OI, 9. Šola tumorjev prebavil

38

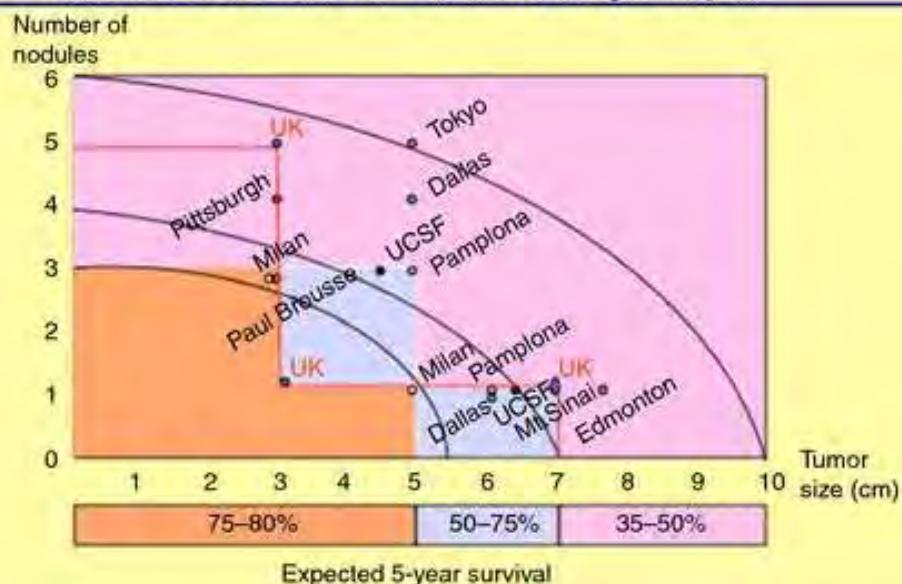

## Milanski kriteriji

- HCC – ET +10T, ZDA priority
- Znotraj MC: ponovitev < 15%, 5-L preživetje ≈ 70%
- „Extended criteria“ izboljšajo dostopnost za OPJ do 50% pacientov.
- V metaanalizah so rezultati slabši.
- Preživetje < 60% ne opravičuje OPJ zaradi vpliva na čakalne liste.
- ???LR-OPJ

22.11.2019, OI, 9. Šola tumorjev prebavil

39

HCC 'Metro Ticket' - The further the distance, the higher the price

22.11.2019, OI, 9. Šola tumorjev prebavil

40

## Bridging

- HCC znotraj MC pri cirozi CP B,C → OPJ
- T1 HCC (<2cm) – 10% pacientov lahko preskoči MC na ČL- BIOLOGIJA TU
  - AFP > 500 IN RAST >1cm/3meseca
    - TACE, MWA – omogoča premostitev
    - SBRT – vloga prihodnosti

22.11.2019, OI, 9. Šola tumorjev prebavil

41

## Downstaging

- Lokalne ablativne tehnike za HCC > MC, da ↓ Tu breme
- Uspešne v < 50%
- Ponovitev ↑ kot znotraj MC ≈ 17%
- Preživetje 5-L (70-90% - nehomogena distribucija)

22.11.2019, OI, 9. Šola tumorjev prebavil

42

## Downstaging

- Zaradi nekonsistentnosti rezultatov le znotraj študij in v programih z velikim številom donorjev KO NI VPLIVA NA ČL.

22.11.2019, OI, 9. Šola tumorjev prebavil

43

## Zaključek

- OPJ je trenutno edino zdravljenje dveh muh na en mah.
- OPJ pri nas v okviru Milanskih kriterijev.

22.11.2019, OI, 9. Šola tumorjev prebavil

44

April 2015

SIRT Maj 2015

Surgery december 2015

february 2019 CR

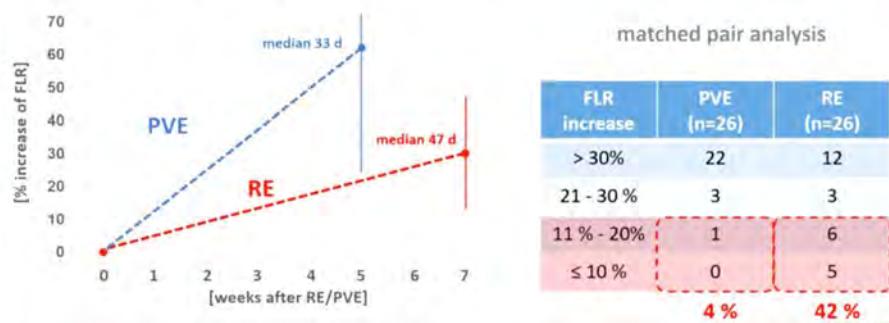

## SIRT – učinkovit pri “down-sizing”

“Available data suggest that SIRT in unresectable HCC and iCCA can provide a considerable **down-sizing** of the tumors to **possibly allow resection** (...). In patients whose FLR volume represents the only surgical concern, portal vein embolization remains the treatment of choice.”

Cucchetti A et al., Liver Cancer 2016

## Hipertofija po PVE in SIRT

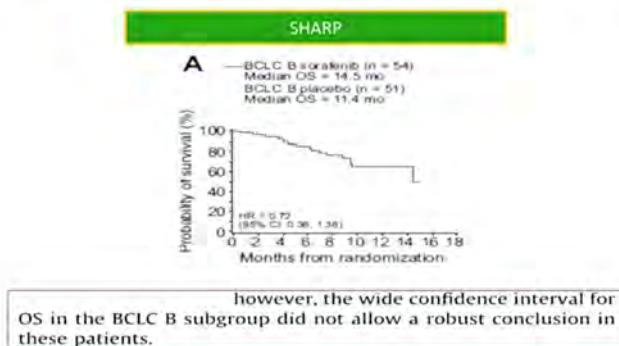

### Left-Liver Hypertrophy After Therapeutic Right-Liver Radioembolization Is Substantial but Less Than After Portal Vein Embolization

Gorlipp B et al. Hepatology 2014

## BCLC B – večji ali številni tumorji

Could be treated with Sorafenib but evidence is not robust

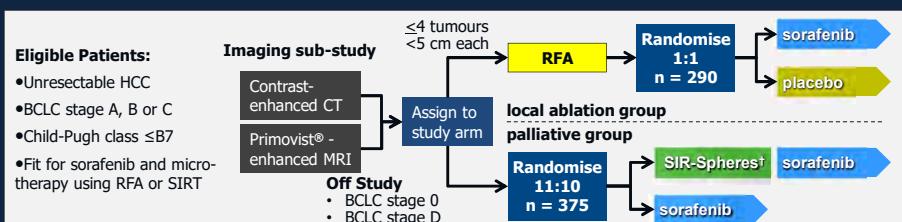

Bruix J et al. J Hepatol 2012

## SORAMIC study

Can the overall survival of patients with HCC be improved by combining sorafenib with SIR-Spheres microspheres?

**Design:** Prospective open-label, multi-centre, multi-national (Europe) RCT

**Primary endpoints:**

**Imaging sub-study:** Non-inferiority (1<sup>st</sup> step) or superiority (2<sup>nd</sup> step) of Primovist-enhanced MRI

**Local ablation:** Time-to-recurrence

**Palliative:** Overall survival

**Sponsor:** University of Magdeburg

**PIs:** Prof. Peter Malfertheiner; Prof. Jens Ricke

**Status:** dec.2015

**Secondary endpoints:**

- Quality of life
- Biomarker analysis

**Imaging sub-study:**

- Detected lesions and diagnostic confidence

**Local ablation group:**

- Detection of recurrence
- Safety and toxicity

**Palliative group:**

- Safety and toxicity
- Overall survival for patients with or without PVT

# TACE in biološka zdravila *EMERALD -1*

## Zaključek

- Bolnike v zgodnjem stadiju bolezni zdravimo z ablativnimi metodami
- Kemoembolizacija je metoda izbora v srednjem stadiju bolezni
- SIRT lahko izvajamo v sklopu raziskav ali pa pri izbrani skupini bolnikov BCLC B in BCLC C, ki so slabi kandidati za TACE in v primeru progrusa po TACE
- kombinirano zdravljenje različnih metod intervencijske radiologije in biološkega zdravljenja
- Multidisciplinarni pristop

# **Prikaz primera**

## ***multidisciplinarni pristop***

Zdenko Kikec  
SB Slovenj Gradec

Ljubljana, 22. november 2019

### ***Prikaz primera***

- 58 letni delovno aktiven moški
- prosi za gastroskopijo zaradi spahovanja in postprandialnega tiščanja v epigastriju
- status in pridružene bolezni olezni:
  - *status performans po WHO 0*
  - *sladkorna bolezen na insulinski terapiji*

## **Prikaz primera**

- **Gastroskopija (2.4.2019)**

- normalen požiralnik, EG prehod, fundus, korpus želodca in duodenum
- blago pordela sluznica antruma
- ureazni test je po 24 urah negativen
- Histološki izvid: blag kemični gastritis

- **Laboratorijski izvidi (2.4.2019)**

- |               |           |
|---------------|-----------|
| - KKS         | - amilaza |
| - CRP 100     | - lipaza  |
| - elektroliti | - LDH     |
| - urea        | - PSA     |
| - kreatinin   |           |

## **Prikaz primera**

- **Gastroskopija (2.4.2019)**

- normalen požiralnik, EG prehod, fundus, korpus želodca in duodenum
- blago pordela sluznica antruma
- ureazni test je po 24 urah negativen
- Histološki izvid: blag kemični gastritis

- **Laboratorijski izvidi (2.4.2019)**

- |               |           |                              |
|---------------|-----------|------------------------------|
| - KKS         | - amilaza | - <b>CEA 31,5</b>            |
| - CRP 100     | - lipaza  | - <b>Ca 19-9 &gt; 10 000</b> |
| - elektroliti | - LDH     |                              |
| - urea        | - PSA     |                              |
| - kreatinin   |           |                              |

## **Prikaz primera**

- **UZ abdomna (3.4.2019)**
  - 35 mm velika hipoehogena sprememba glave trebušne slinavke
  - številne fokalne hipoehogene sprememb v različnih jetrnih segmentih
- **CT abdomna (4.4.2019)**
  - 38 x 35 x 45 mm velika tumorska formacija v glavi trebušne slinavke
  - suspektno preraščanje duodenuma
  - zasevki v več jetrnih segmentih (vsaj 10)
  - posamezne povečane bezgavke med želodcem in trebušno slinavko
  - tumorski tromb v. porte

## **Prikaz primera**

- **Biopsija jeter (5.4.2019)**
  - normalni hepatociti
- **Endoskopski UZ z igelno biopsijo (15.4.2019 KOGE Lj)**
  - adenokarcinom trebušne slinavke

*Je vedno potrebna histološka potrditev?*

*Sladkorna bolezen!!*

## **Prikaz primera**

- **Laboratorijski rezultati (23.4.2019)**
  - bilirubin 230/213
  - AST 3,7
  - ALT 8,9
  - gamaGT 28,7
  - AF 4,4

## **Prikaz primera**

- **Laboratorijski rezultati (23.4.2019)**
  - bilirubin 230/213
  - AST 3,7
  - ALT 8,9
  - gamaGT 28,7
  - AF 4,4

*Obstrukcijski ikterus zaradi tumorja glave trebušne slinavke*

## **Prikaz primera**

- **ERCP (24.4.2019)**
  - endoskopist v naši ustanovi ne uspe vstaviti stenta
- **Zunanja biliarna drenaža**
  - v drugi ustanovi ne uspe
- **ERCP (26.4.2019 KOGE)**
  - uspešno vstavljen samoraztezni kovinski stent

## **Prikaz primera**

- **Kemoterapija 1. reda**
  - FOLFIRINOX
  - *prva aplikacija na OI Ljubljana*
  - prejme 4 cikluse
  - brez pomembnejših stranskih učinkov
- **Kontrolni CT**
  - velikost tumorja je manjša
  - jetrne metastaze so večje in številčnejše
  - brez tromba v. porte
  - Ca 19-9 je ves čas nad 10 000

## **Prikaz primera**

- **Kemoterapija 2. reda**
  - nab Paklitaksel in Abraksan
  - terapijo odlično prenaša
  - Ca 19-9 750
  - prejme 3 cikluse
- **Kontrolni CT (25.10.2019)**
  - tumor trebušne slinavke stagnira
  - metastaze v jetrih - regres

## **Prikaz primera**

- **27.10.2019**
  - febrilen
  - abdominalna bolečina
  - subikteričen
- **Laboratorijski rezultati (28.4.2019)**
  - Lkc 35 000
  - CRP 350
  - bilirubin 45/38
  - gama GT 23
  - AF 6,3

## **Prikaz primera**

- **UZ abdomna in CT jeter**
  - *absces jeter*
  - *dva abscesa subdiafragmalno*
  - *drenaža abscesov*
  - *antibiotična terapija (Tazocyn, Garamycin)*
- **ERCP**
  - *delna obstrukcija stenta*
  - *ponovna vstavitev stenta*

## **Prikaz primera**

- **18.11.2019**
  - *odpuščen*
  - *brez znakov vnetja*
  - *brez ikterusa*
  - *sam si je zaželel malo odmora do*
- **Nadaljevanja kemoterapije**
  - *predvidene za 26.11.*
  - *shema enaka*

## **Zaključki**

- *Incidenca raka trebušne slinavke je v porastu*
- *Bolezen le redko odkrijemo v zgodnjem stadiju*
- *Anatomska lega trebušne slinavke je strateško zelo pomembna*
- *Obravnava bolnikov je zahtevna*
- *Obravnava zahteva multidisciplinaren pristop:*
  - *internist gastroenterolog*
  - *interventni endoskopist*
  - *rentgenolog*
  - *interventni rentgenolog*
  - *onkolog*
  - *patolog*
  - *citolog*
  - *mikrobiolog*
  - *abdominalni kirurg*

# Zdravljenje HCC s SBRT

Pripravila: Nika Dobnikar, dr. med.

Mentorica: izr. prof. dr. Irena Oblak, dr. med.

Ljubljana, 22.11.2019

HCC je radiosenzitiven tumor v radiosenzitivnem organu.  
SBRT visoko natančna tehnika obsevanja, ki omogoča uporabo ablativnih doz.

SBRT pri zdravljenju HCC velja za:

- učinkovito metodo zdravljenja za izbrane bolnike;
- omogoča odlično lokalno kontrolo ob ugodnem toksičnem profilu.

Avtor	Leto	Vrsta raziskave	Število bolnikov	1y/2y/3y LC (%)	1y/2y/3y OS (%)
Feng M	2018	prospektivna	69	99/95/95	63/36/22
Kubo K	2018	retrospektivna	65	100/100/100	90/72/56,3
Que J	2016	retrospektivna	115	86,3/81,6/NA	63,5/41,3/NA
Uemoto K	2018	retrospektivna	121	95/91,5/91,5	78/66,8/50
Sapir E	2018	retrospektivna	125	96,5/91,3/91,3	74,1/34,9/NA
Baumann BC	2018	retrospektivna	37	95/95/95	87/50/43
...	...	...	...	...	...

Metaanaliza 32 raziskav, 1950 pacientov s HCC, zdravljeni s SBRT:

- 1y LC 85,7%; 2y LC 83,6%, 3y LC 83,9%
- G ≥3 jetrna toksičnost: 4,7%; GI 3,9%
- OS in LC – korelacija z velikostjo TU
- ↓toksičnost ob boljši jetrni funkciji (Child-Pugh A, izjemoma B)

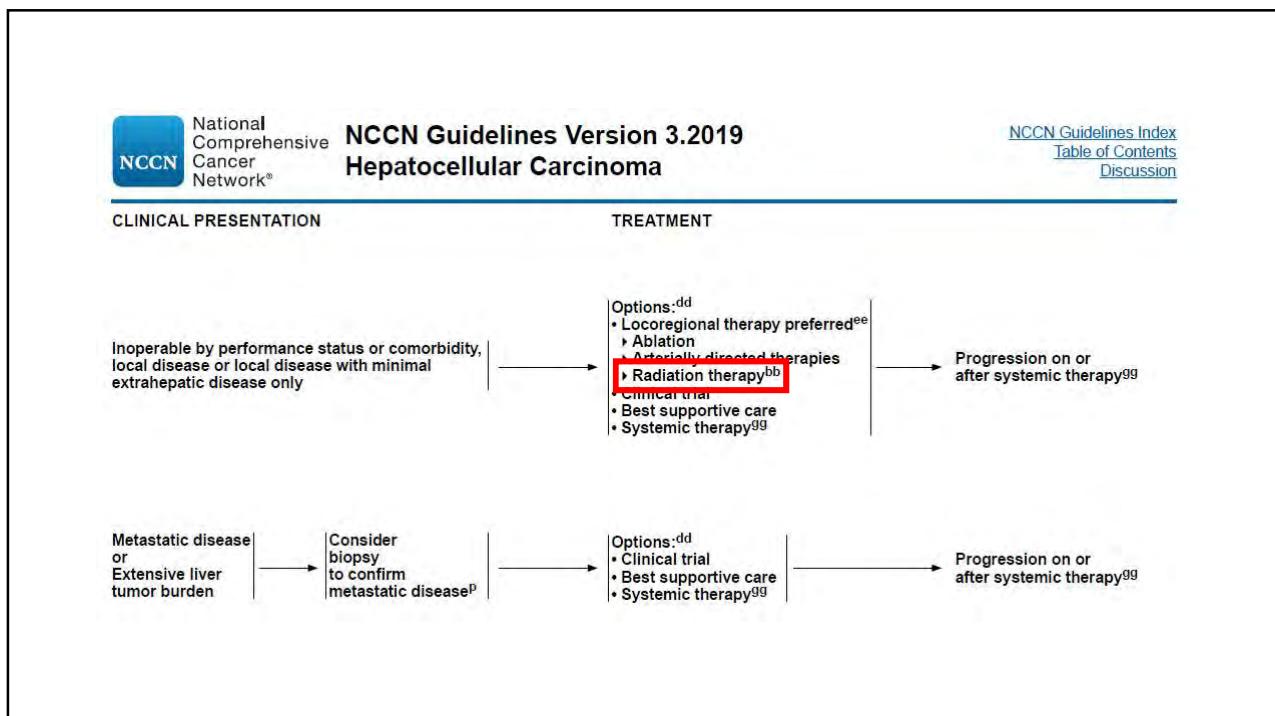

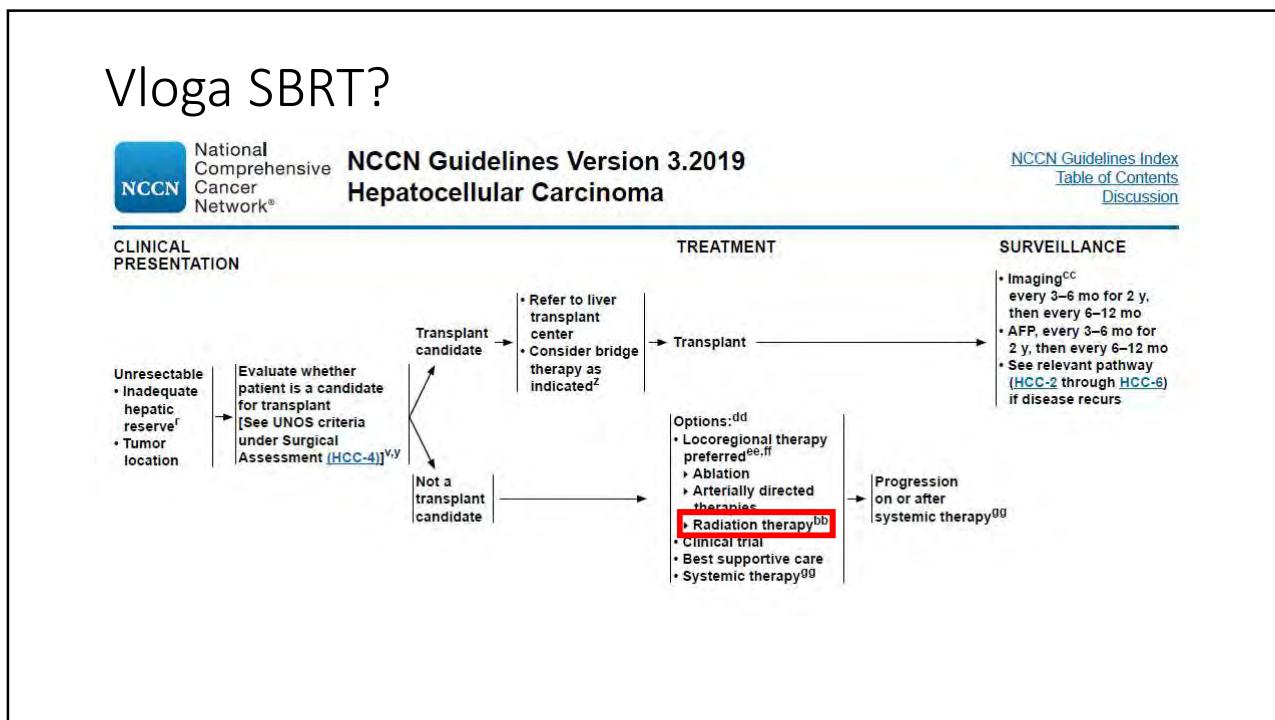

Gerum S, et al. SBRT in HCC: A mini-review. World Journal of Gastrointestinal Oncology 2019; 11(5): 367-76

Avtor	Leto	Vrsta raziskave	Število bolnikov	1y LC (%)	1y OS (%)
Cardenes et al	2010	faza I	17	100	75
Sanuki et al	2014	retrospektivna	185	99	95
Scorsetti et al	2014	faza II	43	86	78
Su et al	2016	retrospektivna	132	91	94

## NCCN Guidelines Version 3.2019 Hepatocellular Carcinoma

[NCCN Guidelines Index](#)  
[Table of Contents](#)  
[Discussion](#)

BCLC staging and treatment options according to level of evidence and approval status

BCLC stage	Treatment (standard of care)	Indication constraints based on tumour burden and liver function	Alternative treatment	Alternative treatment
			Not yet EMA-approved	
0	Single tumour any size or up to 3 nodules ≤ 3 cm	Resection [III, A] Adequate size and function of remnant liver		SBRT [III, C]
	Preserved liver function	Transplantation Size ≤ 5 cm, number ≤ 3 [III, A]		HDR brachytherapy [III, C]
	ECOG PS 0	Thermal ablation [III, A] Size ≤ 3 cm, not adjacent to vessels or bile duct		SIRT [III, C]
		TACE [I, A] Contraindications against resection and thermal ablation. Bridging to transplantation		

*Hepatocellular Carcinoma: ESMO Clinical Practice Guidelines for diagnosis, treatment and follow-up, Ann Oncol (2018) 29 (Suppl 4): iv238–iv255*

## Primerjava SBRT z ostalimi metodami zdravljenja

Avtor	Leto	Vrsta	Primerjava	1y LC	1y OS	Toksičnost	Komentar
Su et al	2017	pm	SBRT vs.	84%	100%	slabost	LK/OS primerljiva, razlika v NU
				OP 72%	97%	krvavitev, bolečina	
Wahl et al	2016	retro	SBRT vs.	97%	74%	(G3+) 3%	Tu>2cm = SBRT ↑LC
				RFA 84%	70%	(G3+) 11%	
Sapir et al	2018	retro	SBRT vs.	97%	75%	(G3+) 8%	Brez razlik pri OS
				TACE 47%	74%	(G3+) 13%	

Gerum S, et al. SBRT in HCC: A mini-review. World Journal of Gastrointestinal Oncology 2019; 11(5): 367-76

## Premostitveno zdravljenje s SBRT do transplantacije

Avtor	Leto	Število bolnikov	Čas do transplantacije	LC do transplantacije	Patološki popolni odg.	Toksičnost G3+
Katz et al	2012	12	6,3 mesece	100%	20%	0

(Katz AW, Chawla S, Qu Z, Kashyap R, Milano MT, Hezel AF. Stereotactic hypofractionated radiation therapy as a bridge to transplantation for hepatocellular carcinoma: clinical outcome and pathologic correlation. Int J Radiat Oncol Biol Phys 2012; 83: 895-900)

Avtor	Leto	Število bolnikov	Čas do transplantacije	LC do transplantacije	Patološki popolni odg.	Toksičnost G3+
O'Connor et al	2012	11	3,8 mesece	83%	27%	0

(O'Connor JK, Trotter J, Davis GL, Dempster J, Klintmalm GB, Goldstein RM. Long-term outcomes of stereotactic body radiation therapy in the treatment of hepatocellular cancer as a bridge to transplantation. Liver Transpl 2012; 18: 949-954)

→ Dobra lokalna kontrola in patološki odgovor ob nizki toksičnosti

Primerjava SBRT z ostalimi premostitvenimi tehnikami:

- dobra in primerljiva lokalna kontrola ter patološki odgovor
- ugodnejši toksični profil pri SBRT in SIRT

Metoda	Število bolnikov	Povprečen premer lezije (cm)	LC (%)	Mean pathological necrosis (%)	Toksičnost G3+ (%)
TACE	37	2,6	80,6	68	11
SBRT	24	3	91,4	56	0
RFA	9	2,5	77,8	70	22
SIRT	9	3,4	77,8	94	0

→ SBRT konkurenčna premostitvena metoda

*Mohamed M, Katz AW, Tejani MA, Sharma AK, Kashyap R, Noel MS, Qiu H, Hezel AF, Ramaraju GA, Dokus MK, Orloff MS. Comparison of outcomes between SBRT, yttrium-90 radioembolization, transarterial chemoembolization, and radiofrequency ablation as bridge to transplant for hepatocellular carcinoma. Adv Radiat Oncol 2015; 1: 35-42*

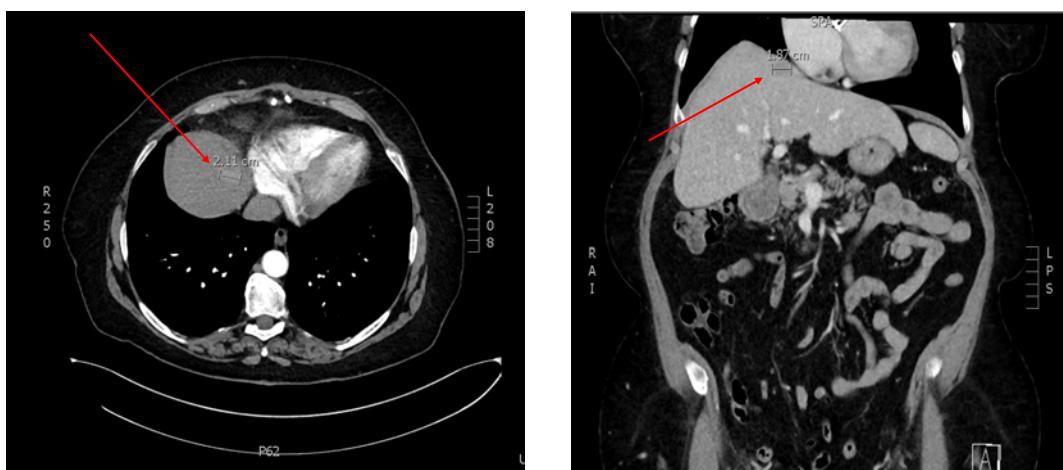

Predstavitev primera

R.M., 71 let

- St. po AVR (biološka zaklopka) 2017, mitralna insuficienca, pljučna hipertenzija, AH, hiperlipoproteinemija, st. po holecistektomiji
- Kronični hepatitis B, na antivirusni th (ob tem bolezen v mirovanju), jetrna ciroza (Child-Pugh A), brez portalne hipertenzije
- Junij 2018: ↑ AFP (182)
- CT trebuha: med 6.,7. in 1. segmentom lezija suspektna za HCC
- December 2018: elektrokemoterapija, pooperativne težave z dolgo hospitalizacijo
- Februar 2019: kontrolni CT pokaže kompletни odgovor na EKT

Junij 2019: kontrolni CT

- Nova hipervaskularna lezija premera 27 mm visoko v 8. segmentu subdiafragmalno v višini srca (5 mm stran) – nov HCC

- Jetrni konzilij: glede na lokacijo, velikost in bolničine želje - poskus SBRT solitarnega HCC-ja.

- Prvi pregled na OI:

- Jezikovna bariera, svojci ne želijo odkritega pogovora o diagnozi
- Odklanja operativni poseg, želi si obsevanja
- PS po WHO 1, v statusu sistolni šum, sicer brez pomembnejših odstopanj
- Laboratorij: ↑AFP (227), mejno povišana gamaGT in AF, povišani dušični retenti
- Jetrna ciroza ocenjena s Child-Pugh A

- Dodatna konzultacija z radiologom: tehnična izvedljivost SBRT problematična zaradi bližine srca.

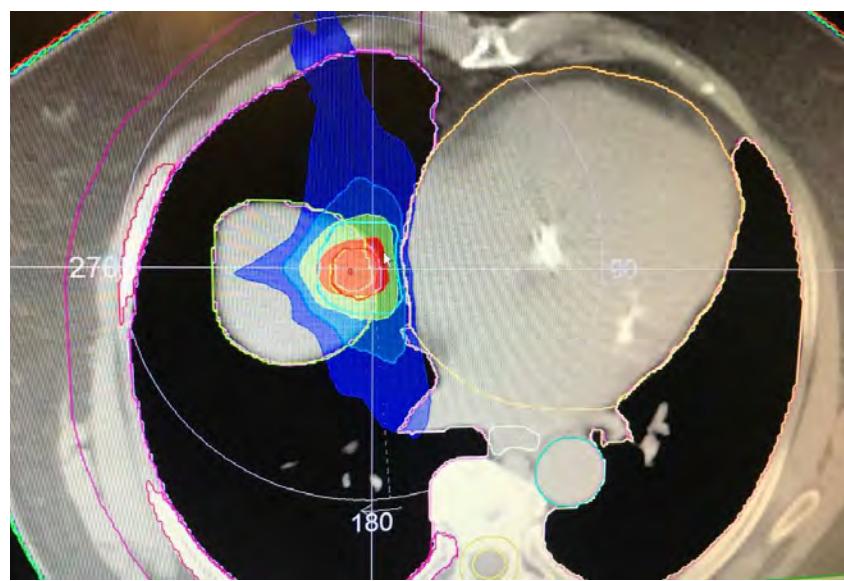

- Vstavitev zlatih zrn pod UZ kontrolo (pozicioniranje bolnika med obsevanjem s pomočjo CBCT, kjer so jetrne lezije slabo vidne)

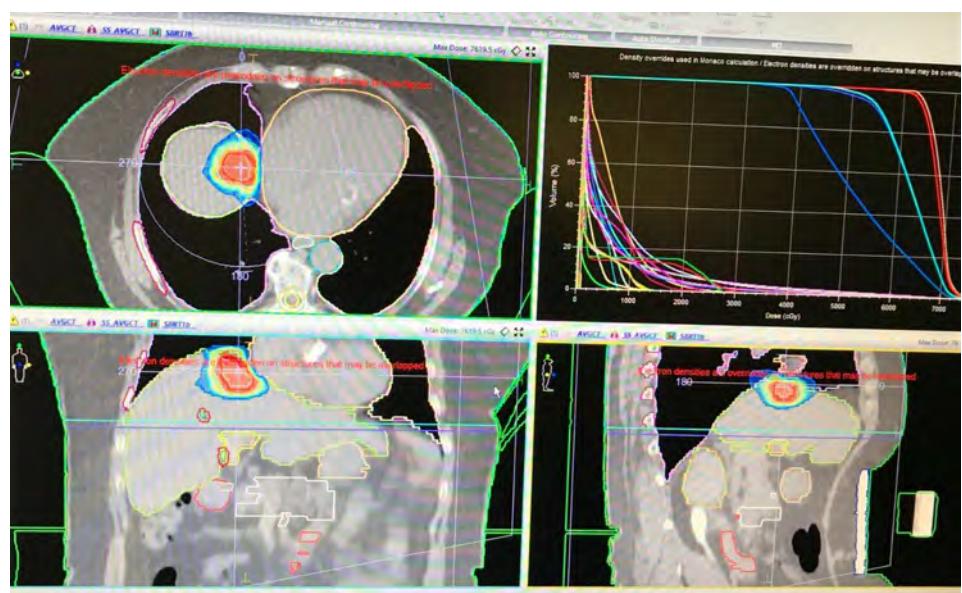

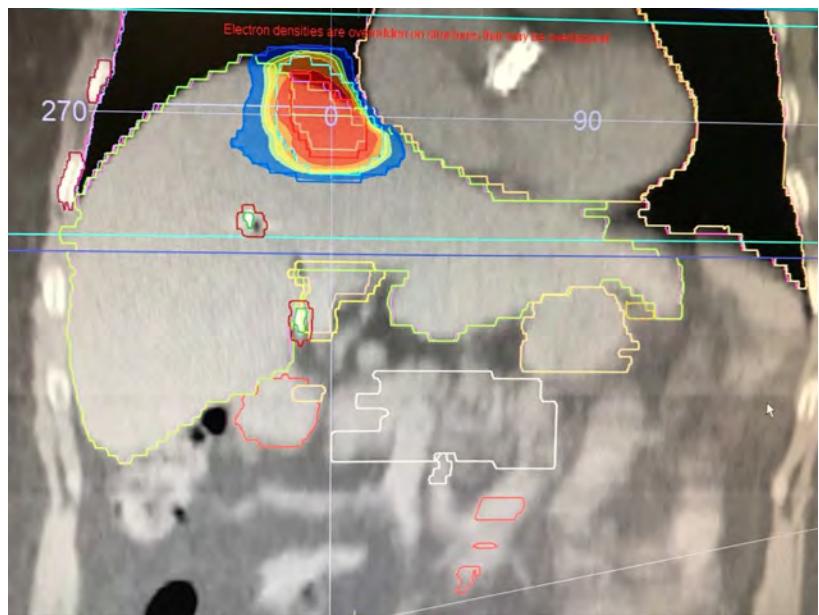

- Pregled dokumentacije z med. fizikom: svetovano RT z ABC tehniko (odmik srca od tarče).

- Priprava na 4D CT simulatorju

- poskus z ABC tehniko - slabo sodelovanje → abdominalna kompresija

Avgust 2019: pričetek obsevanja

- 5 frakcij, vsak drugi dan (protokol ima 3 fr.-bližina srca)
- Ob tem dobrega počutja in brez težav
- Lab: ↑AFP (474), v preostalem brez dinamike

Gastroonkološki konzilij: indicirano sledenje

September 2019: 1. kontrolni pregled po zaključenem obsevanju

- Dobrega počutja
- Lab: ↓ AFP (113)

December 2019: kontrolni CT trebuha, laboratorijske preiskave
