UVOD

Register raka Republike Slovenije (RRS) je eden najstarejših populacijskih registrov raka v Evropi. Leta 1950 ga je ustanovila in do leta 1975 vodila pokojna profesorica dr. Božena Ravnhar. Njeno delo je prevzela profesorica dr. Vera Pompe-Kirn, ki je do upokojitve leta 2003 skrbela za nadaljnje uveljavljanje RRS v domačem in mednarodnem merilu. Od leta 2003 je RRS skupaj z Enoto za epidemiologijo v enotni službi, Epidemiologija in register raka. V njej so poleg RRS še bolnišnični register Onkološkega inštituta Ljubljana, ki posreduje RRS velik del podatkov in omogoča podrobnejši pregled nad bolniki, zdravljenimi v naši ustanovi ne glede na to, kje imajo stalno prebivališče. V zadnjem desetletju smo vzpostavili še nov državni register za vodenje in spremljanje organiziranega presejalnega programa za raka materničnega vrata (ZORA), od leta 2007 pa izgrajujemo informacijski sistem DORA, ki bo informacijska podpora organiziranemu presejalnemu programu za raka dojk. Tudi obstoj teh novih registrov prispeva k temu, da so podatki RRS popolnejši in kakovostnejši, po drugi strani pa podatki RRS prispevajo k vrednotenju učinkovitosti presejalnih programov.

Prijavljanje raka je v Republiki Sloveniji obvezno in zakonsko predpisano že od ustanovitve Registra (Ur. I. SRS, št. 10/50, št. 29/50, št. 14/65, št. 1/80, št. 45/82, št. 42/85; Ur. I. RS, št. 9/92 in št. 65/00). Zbrani podatki so podlaga za ocenjevanje bremena rakavih bolezni v državi, za načrtovanje in ocenjevanje onkološkega varstva na področju primarne in sekundarne preventive, diagnostike, zdravljenja in rehabilitacije, za načrtovanje zmogljivosti in sredstev, ki so potrebni za obvladovanje rakavih bolezni (osebje, medicinska oprema, posteljne zmogljivosti), ter za klinične in epidemiološke raziskave v Sloveniji in v sklopu širših mednarodnih raziskav.

Populacijski register raka opravičuje svoj obstoj, če se zbrani podatki tudi redno obdelujejo, objavljajo in uporabljajo. Ena izmed stalnih oblik vračanja obdelanih informacij so letna poročila. Ker je virov informacij več, je čas, potreben za dokončanje zbirke, povezavo in objavo podatkov pri nas in po svetu daljši, običajno 2 leti do 3. Sedanje poročilo prikazuje podatke o novih primerih, registriranih v letu 2006. Za osnovno

INTRODUCTION

The Cancer Registry of Republic of Slovenia (CRS) is one of the oldest population based registries in Europe. It was founded in 1950 by the late Professor Božena Ravnhar, MD, PhD, who headed it till 1975. She was succeeded by Professor Vera Pompe-Kirn, who contributed a lot to the further development of the Registry as well as its recognition at the national and international level all until her retirement in 2003. Since 2003, the CRS together with the Unit of Epidemiology is merged in a single Epidemiology and Cancer Registry service. Besides the CRS, the new service also comprises the hospital-based Cancer Registry of the Institute of Oncology Ljubljana, which contributes a considerable part of information to the CRS and facilitates a more detailed overview of patients treated at the Institute, irrespective of their permanent residence. In the last decade, we have established a new national Cervical Cancer Screening Registry in charge of coordinating and monitoring the organised cervical cancer screening programme (ZORA), while an information system DORA to support organized breast cancer screening programme has been underway since 2007. While the existence of these two new registries contributes to a higher quality and completeness of CRS's data, the latter contribute to the evaluation of the effectiveness of screening programmes.

Notification of cancer has been compulsory in Slovenia since the foundation of the Registry and prescribed by law (Official Gazette of SRS, No. 10/50, No. 29/50, No. 14/65, No. 1/80, No. 45/82, No. 42/85; Official Gazette of RS, No. 9/92 and No. 65/00). The data collected serve as the basis for assessing the cancer burden in the country, for programming and evaluating primary prevention, diagnosis, treatment and rehabilitation, planning facilities and funding needed for cancer control (personnel, equipment and hospital capacities) as well as for clinical and epidemiological research in Slovenia and in international multicentric studies.

The existence of a population-based cancer registry is justified only by regular processing, publishing and using the data collected. The Registry's Annual Reports are one of the regular

informacijo o tem, kakšno incidenco pričakujemo leta 2009, dodajamo s posebno statistično metodo ocenjeno napoved za leto 2009.

RRS je prva letna poročila izdajal že v letih 1953–1957 za leta 1951–1955. Prva analiza podatkov za leto 1950 je bila objavljena v **Zdravstvenem vestniku** leta 1951. Podatki za leta 1957–1971 so bili objavljeni v periodičnih publikacijah Svetovne zdravstvene organizacije **Epidemiological and Vital Statistics in World Health Statistics Report**. Od leta 1965 so bili podatki spet redno objavljeni v posebnih letnih poročilih z naslovom **Rak v Sloveniji** (1965–1977) in **Incidenca raka v Sloveniji** (1978–2003), in sicer v slovenskem in angleškem jeziku. Za vsebino publikacije skrbi uredniški odbor, v katerem smo zbrani specialisti raznih vej onkologije. Glede na želje in pripombe uporabnikov letna poročila iz leta v leto dopolnjujemo, hkrati pa poskrbimo, da ostajajo objavljeni podatki primerljivi.

Incidenca raka je po svetu zelo različna, za raziskovanje teh razlik pa so ključni kakovostni podatki. Prav zato so bili in so naši podatki o incidenci raka zanimivi tudi za svet. Leta 1957 je izšlo prvo obsežnejše poročilo za leta 1950–1955 v angleščini. Podatke za leta 1956–60, 1961–65, 1968–72, 1973–76, 1978–81, 1982–87, 1988–92 in 1993–97 so objavili tudi v vseh osmih zvezkih knjige **Cancer Incidence in Five Continents**, ki jo je izdajala Mednarodna agencija za raziskovanje raka. Podatki o incidenci in umrljivosti za rakom so vključeni tudi v mednarodne podatkovne baze **EUROCIM, GLOBOCAN, ACCIS**, preživetje slovenskih bolnikov pa je obdelano v mednarodnih študijah **EUROCARE II, EUROCARE III** in **EUROCARE IV**.

Zbrane podatke v Registru obdelujemo in pojasnjujemo v skladu s trenutno perečo problematiko v Sloveniji, z lastnim raziskovalnim programom in s predlogi uporabnikov. Izsledke objavljamo v člankih v domačem in tujem strokovnem in poljudnem tisku. Izdane so tudi tri knjige: **Zemljevidi incidence raka v Sloveniji 1978–1987**, **Preživetje bolnikov z rakom v Sloveniji 1963–1990** in **Preživetje bolnikov z rakom v Sloveniji 1983–1997**. V kratkem bo izšla nova knjiga z naslovom **Preživetje bolnikov z rakom, zbolelih v letih 1991–2005 v Sloveniji**. Seznam drugih pomembnejših del, objavljenih v zadnjih petih letih, je v dodatku na koncu poročila.

ways of disseminating information. Because of a variety of data sources, data collection, their linking and publication is rather time consuming (with us and elsewhere) and usually takes two to three years. As preliminary information on expected incidence in 2009, predicted numbers and rates are presented in this report.

The first annual reports of the Registry for the period 1951–1955 were issued during the years 1953–1957. The first data analysis for the year 1950 was published in **Zdravstveni vestnik** in 1951. The data for the period 1957–1971 were appearing in the periodicals **Epidemiological and Vital Statistics Report** and **World Health Statistics Report**, both edited by World Health Organization. From 1965 onwards, the data have been appearing regularly in special bi-lingual (Slovene-English) annual reports, first entitled **Cancer in Slovenia** (1965–1977), and then **Cancer Incidence in Slovenia** (1978–2003). The editorial board, responsible for the contents of the report, consists of experts of different specialties in oncology. Our endeavours have always been directed towards further improvement of these publications, by taking into account as much the requests and comments of the users as the comparability of the data from year to year.

There are great differences in cancer incidence among different populations and to evaluate them, good quality data are needed from different parts of the world. That is why our data on cancer incidence have always been interesting also for professional public abroad. In 1957, the first comprehensive report, covering the period 1950–1955, was issued in English under the title **Cancer in Slovenia 1955**. The data for the periods 1956–60, 1961–65, 1968–72, 1973–76, 1978–81, 1982–87, 1988–92 and 1993–97 were published in all eight volumes of the **Cancer Incidence in Five Continents** issued by International Agency for Research on Cancer. The data on cancer incidence and mortality are also included in international databases **EUROCIM, GLOBOCAN, ACCIS**. The survival of Slovenian cancer patients is analysed in the international studies **EUROCARE II, EUROCARE III** and **EUROCARE IV**.

The data collected have been processed in accordance with the current problems in Slovenia, as well as with respect to our research

Letošnje poročilo je v celoti dostopno v elektronski obliki na spletni strani Onkološkega inštituta Ljubljana: <http://www.onko-i.si/rrs>.

programme and suggestions from our users. These data are published in national and foreign medical literature and as publications for lay readers. Three special publications are **Atlas of Cancer Incidence in Slovenia 1978–1987**, **Cancer Patients' Survival in Slovenia 1963–1990** and **Cancer Patients' Survival in Slovenia 1983–1997**. A new book entitled **Survival of Cancer Patients, Diagnosed in 1991–2005 in Slovenia** will be published soon. The list of other relevant publications in last five years is at the end of this report.

The current annual report is available in pdf format on website of the Institute of Oncology Ljubljana: <http://www.onko-i.si/crs>.

GRADIVO IN METODE

Osnovni vir podatkov so **prijavnice rakave bolezni**. Registru jih pošiljajo iz vseh bolnišnic in diagnostičnih centrov v Sloveniji, iz ordinacij osnovnega zdravstvenega varstva pa le izjemoma, če bolnik ni napoten na nadaljnje preiskave in/ali zdravljenje. Dodatni vir podatkov so zdravniška poročila o vzroku smrti in obducijski zapisniki z diagnozo maligne bolezni. Zbiranje podatkov za to letno poročilo smo zaključili 28. februarja 2009.

Kakovost podatkov registrov raka osvetljujejo naslednji kazalci: odstotni delež mikroskopsko (histološko ali citološko) potrjenih primerov in odstotni delež primerov, registriranih samo iz zdravniških poročil o vzroku smrti. Vrednosti teh kazalcev so prikazane v Tabeli 3.

Popolnost registracije kaže delež vseh novih primerov raka na področju, ki ga pokriva register in ki so vključeni v podatkovno zbirko registra. Neposredno jo je mogoče meriti samo s posebnimi raziskavami, namenjenimi oceni popolnosti, npr. s ponovnim pregledom odpustnih diagnoz in popisov bolezni v bolnišnicah ali ambulantah na določenem območju. V Sloveniji takih raziskav zaenkrat še nismo opravili, veliko pa nam k popolnosti zajema pomagajo kolegi kliniki, ki jih zanima preživetje pri njih zdravljenih bolnikov in nam pošljejo podatke o svoji skupini bolnikov, med katerimi velikokrat najdemo take, ki jih v

MATERIAL AND METHODS

The main sources of data are notifications gathered from all hospitals and diagnostic centres in Slovenia, exceptionally also from primary health care centres in case the patient was not referred for further diagnostic investigations and/or treatment. This information is completed by death certificates and autopsy protocols stating cancer diagnosis. The collection of data for the current report was completed on February 28, 2008.

The **quality of data** can be assessed by the following parameters: the percentage of microscopically (histologically or cytologically) confirmed cases and the percentage of cancer cases registered on the basis of death certificates only. The values of these parameters in the three observation periods are presented in Table C.

The **completeness of registration** shows the proportion of all new cancer cases in the region covered by the registry, which are included in the registry's data base. It can be measured directly only by means of special surveys for the evaluation of completeness, e.g. by reviewing patient record in the hospitals or outpatient clinics in a particular region. In Slovenia, no such surveys have been carried out so far. However, a considerable contribution towards the completeness of registration is made by

podatkovni zbirki RRS še ni. Popolnost je večja tam, kjer imamo registri dostop do zdravniških poročil o vzroku smrti. Tako v Sloveniji za umrle za rakom, ki jih še nismo registrirali, dodatno poizvedujemo. S tem se izboljša popolnost registracije rakov s slabo prognozo, ne pa manj usodnih. V Sloveniji predvidevamo, da je registracija manj popolna pri nemelanomskega kožnem raku in pri tistih malignomih, ki se zdravijo samo ambulantno. Podoben problem imajo tudi drugi populacijski registri raka v Evropi.

Popolnost registracije merimo z razmerjem med umrljivostjo in incidenco ter s stabilnostjo incidence v času. To pomeni, da med posameznimi leti ni velikih nihanj incidence in da ni velikih razlik v odstotnem deležu primerov, ki jih register zabeleži po tem, ko že zaključi obdelavo podatkov za določeno leto. Število naknadno prijavljenih primerov za vsa leta registracije je prikazano v Tabeli C.

Od leta 1993 je obvezno prijavljjanje sprememb materničnega vratu, označenih kot CIN III (šifra 219 po 8. reviziji ICD), dotej pa so se registrirale le spremembe, označene v tabelah s šifro 234.0 (karzinom in situ). Primerjava s podatki za obdobje 1961–1992 tako ni možna. Po 10. reviziji ICD so vse intraepiteljske spremembe materničnega vratu uvrščene v šifro D06. Od leta 1995 registriramo tudi prijavljene intraepiteljske karzinome mehurja in maligne melanome Clark I.

Za razvrščanje neoplazem po lokacijah RRS od leta 1997 uporablja **10. revizijo Mednarodne klasifikacije bolezni, poškodb in vzrokov smrti**, do takrat pa je uporabljala osmo. Za vse, ki želijo primerjati podatke iz prejšnjih poročil, je dodana Tabela 4b. Klasifikaciji različno uvrščata bolezni med maligne, zato število novih primerov raka po obeh klasifikacijah ni enako.

Prav pri uvrščanju med maligne bolezni je treba opozoriti še na klasifikacijo za morfologijo neoplazem, za katero uporabljamo morfološki del **Mednarodne klasifikacije bolezni za onkologijo**, od poročila za leto 2001 **tretjo izdajo**. V tej izdaji je spet nekaj sprememb, tudi katere histološke vrste sodijo med maligne. Po tretji reviziji so med maligne uvrščene kronične mieloproliferativne bolezni in mielodisplastični sindromi (sedaj v topografski šifri C96.7). V skladu z novimi pravili tudi mejno malignih ovarijskih tumorjev ne uvrščamo več v kategorijo C56, pač pa v D39.1.

our colleagues – clinicians, who send us the data on their groups of patients in order to get information about their survival and among them we often find cases that have not been entered in the CRS base yet. The registration is more complete where the registries have access to autopsy reports, and can send out additional inquiries about disease for the deceased that have not been entered into the database yet. This improves the completeness of registration of cancers with poor prognosis, but not also of less fatal ones. It is presumed that in Slovenia registration is less complete in non-melanoma skin cancer and in malignomas that are treated on the out-patient basis only. The completeness of registration is measured by the ratio between mortality and incidence, and by stability of incidence in time, which means that there are no major fluctuations in the incidence between individual years, and neither great differences in the percentage of cases registered only after the data for a particular year have already been processed. The numbers of subsequently reported cases for all registration years are presented in Table C.

In 1993, compulsory registration of all cervical intraepithelial dysplasias classified as CIN III was introduced (code 219 according to ICD-8). Till then, only carcinoma in situ (code 234.0) was registered. Thus, the comparison with the data for the period 1961–1992 is not possible. According to ICD-10, all cervical intraepithelial neoplasms (in situ and CIN III) are coded as D06. Since 1995, the number of all reported intraepithelial carcinomas of the bladder and all malignant melanomas Clark I have been registered.

Since 1997, cancer sites are coded according to the 10th revision of the **International Statistical Classification of Diseases and Related Health Problems** (ICD-10); before, the 8th revision was used (ICD-8). As in earlier reports, Table 4b contains also the data coded according to the 8th revision in order to allow the comparison with the earlier reports. There are differences in coding neoplasms as malignant or benign according to both classifications, so, according to the two classifications, the number of new cancer cases is not equal.

When classifying tumours as malignant, the behaviour digit of the morphology code of

Opozarjamo še, da so v Tabeli 7 histološke vrste razvrščene po tretji reviziji morfološkega dela Mednarodne klasifikacije bolezni za onkologijo in združene v drugačne skupine kot v poročilih za leto 2000 in leta pred njim.

V Tabeli 6 smo do Letnega poročila 2002 prikazovali podatke po devetih zdravstvenih regijah. V skladu z Uredbo o standardni klasifikaciji teritorialnih enot – SKTE, ki predpisuje sistematiko členitve ozemlja Slovenije na 11 ravneh, smo se odločili, da v tej tabeli in regijskih primerjavah uporabimo raven SKTE-3, 12 statističnih regij. Podatke pa še vedno lahko preuredimo do ravni upravnih enot.

Za napoved incidence v letu 2009 je uporabljena metoda po Dybi in Hakulinenu, ki je primera za oceno incidence v krajšem časovnem obdobju, saj upošteva samo obdobje diagnoze in starost; pri dolgoročnejših napovedih pa je treba upoštevati tudi vpliv rojstne kohorte.

the **third edition of International Classification of Diseases for Oncology** is used in the current annual report. In this edition, some changes were introduced in terms of morphology and behaviour code. According to this classification, chronic myeloproliferative disorders and myelodysplastic syndromes are classified as malignant (topography code C96.7), while ovarian tumours of borderline malignancy are currently coded as D39.1 (and not C56).

It should be noted that in Table 7 the morphology codes are grouped in different categories as in reports 2000 and previous and are adapted to the third revision of morphology part of International Classification of Diseases for Oncology.

Till Annual Report 2002, the data in Table 6 have been presented by 9 health regions. The new law on regional division of Slovenia introduced the system of eleven levels. So, 12 statistical regions have been chosen to present the data in Table 6.

The method by Dyba and Hakulinen was used for predictions of incidence in 2009. It is suitable for predictions in shorter time period, taking into account the period of diagnosis and age structure of population. For long-term predictions the cohort effect should be included also.

DEFINICIJE IN POJASNILA

Incidenca pomeni število vseh v enem kolesarskem letu na novo ugotovljenih primerov raka v točno določeni populaciji. V incidenco ne štejemo novih primarnih rakov parnega organa iste lokacije, če je bila histološka vrsta obeh rakov, npr. leve in desne dojke, enaka. Prav tako v incidenco ne štejemo novega pojava raka iste histološke vrste na istem organu, npr. multiple lezije v debelem črevesu. V incidenco so vključeni primeri bolezni bolnikov s stalnim bivališčem na območju Republike Slovenije, ne glede na to, kje so bili ti bolniki zdravljeni. **Prevalenca** je število vseh živih bolnikov z rakom na določeni datum ne glede na leto diagnoze. Skupaj z incidenco in umrljivostjo je prevalenca eden od treh osnovnih kazalcev bremena raka.

DEFINITIONS AND COMMENTS

Incidence is the number of newly diagnosed cancer cases in a defined population, reported to the Registry for a given calendar year. New primary cancers of the same histology in paired organs, e. g. on the left and right breast, are not comprised in the incidence figures, neither are any new cancers of the same histology appearing in the same organ, e.g. multiple lesions of the colon. The incidence includes only the data on patients with permanent residence in Slovenia, regardless of the place of treatment. **Prevalence** is the number of all surviving cancer patients, irrespective of the year of diagnosis. Incidence, prevalence and mortality are three major cancer burden indicators.

Tabele in slike v tem poročilu prikazujejo podatke o prebivalcih in incidenci raka v Sloveniji leta 2006 po spolu, starosti, lokaciji, histološki vrsti in stadiju bolezni ob diagnozi, o incidenci po statističnih regijah ter podatke o številu novih primerov raka, ugotovljenih v tem letu po posameznih bolnišnicah, število smrti za rakom po spolu, starosti in lokaciji ter prevalenco najpogostejših rakov.

Tabeli A, B in Slika 1 prikazujejo osnovne podatke o bremenu raka v Sloveniji: število vseh zbolelih in umrlih za rakom v letu 2006, prevalenco in najpogostejše rakave bolezni po spolu in pri obeh spolih skupaj. Več kot polovico vseh rakavih bolezni (56 %) pri obeh spolih je na petih anatomskih mestih: na koži (brez melanoma), debelem črevesu in danki, pljučih, dojki in prostate. V **Tabeli D** je prikazana incidenca in povprečna letna incidenčna stopnja vseh in izbranih rakov v dveh 5-letnih obdobjih 1997–2001 in 2002–2006. Pomembne so **napovedane vrednosti za leto 2009** s 95-odstotnim napovednim intervalom.

Slika 2 opozarja na različno breme raka v raznih življenjskih obdobjih. Rak je skoraj izjema pri mladih do 19 let. Manj kot 3 % vseh rakov je med 20. in 34. letom starosti, 87 % bolnic in bolnikov pa zboli po 50. letu. Medtem ko med 35. in 49. letom zboli za rakom nekaj več žensk kot moških, se med 50. in 74. letom to razmerje obrne; delež zbolelih je spet večji med ženskami po 75. letu starosti, tudi zato, ker je njihova pričakovana življenjska doba daljša.

V **Tabeli 3** prikazujemo, na kakšen način je bila postavljena diagnoza pri registriranih novih primerih raka. Od 11.043 leta 2006 na novo registriranih primerov raka je bila pri 93,7 % diagnoza potrjena mikroskopsko (histološko ali citološko), pri 5,6 % z drugimi preiskavami, 0,7 % primerov pa smo registrirali samo na osnovi zdravniškega poročila o vzroku smrti. Ta zadnja odstotna vrednost, ki je že več let podobna, odseva število bolnikov, ki verjetno zaradi starosti ali napredovale bolezni niso bili zdravljeni v bolnišnici. Kakšna je bila morfološka slika malignomov pri 10.347 primerih, pri katerih je bila diagnoza potrjena mikroskopsko, kaže **Tabela 7**. V njej so posebej primeri, ki so potrjeni histološko (92 %), in tisti, ki so bili potrjeni samo citološko (8 %).

Incidenco po petletnih starostnih skupinah prikazuje **Tabela 4a**. Po 8. reviziji ICD, po kateri so raki razvrščeni v **Tabeli 4b**, je novih primerov

Tables and **Figures** show the data on population and on cancer incidence in Slovenia in 2006 by sex, age, primary site, histology, stage of the disease at diagnosis, on the incidence in the individual statistical regions, and on new cancer cases diagnosed in the current year in different hospitals in Slovenia, on deaths and on prevalence of most frequent cancer sites.

Tables A and B and Figure 1 present the basic data on cancer burden in Slovenia: the number of new, deceased and prevalent cancer patients in 2006 and the most frequent cancer sites by sex and both sexes combined. More than half of all cancers (56%) originate from five anatomical sites: skin (melanoma skin cancer is not included), colorectum, lung, breast and prostate. In **Table D**, incidence and average crude incidence rate in two 5-year periods (1997–2001 and 2002–2006) is presented together with **predicted values for 2009** with 95% prediction interval.

Figure 2 points to the different proportion of cancer in different age group. Cancer is extremely rare before age 19. Less than 3% of all cancers appeared in patients aged 20–34, but more than 87% patients are diagnosed after they were 50 years old. In the age group 35–49 the proportion of females with cancer is higher in comparison to males, this changes for age group 50–74 years, but for the patients diagnosed aged 75 years or more there is a higher proportion of females again, primarily because of their higher expected life span.

In **Table 3**, data on basis of diagnosis of new cancer cases that were registered in 2006 are presented. From 11,043 new cancer cases, in 93.7% the diagnosis was confirmed microscopically (by histology or cytology), in 5.6% with other investigations and 0.7% was registered from death certificate only. This latter percentage has been similar for several years and represents those patients that, due to advanced age or disease, have not been treated in the hospital. The morphology of tumours in 10,347 cases, diagnosed microscopically, is presented in **Table 7**. In this table, cases confirmed by histology (92%) and by cytology only (8%) are presented separately.

The cancer incidence by five-year age groups is presented in **Figure 4a**. In **Table 4b**, the diagnoses are coded according to the 8th revision

raka 10.938. Razlika 105 primerov je posledica novega razvrščanja neoplazem glede na tretjo izdajo morfološkega dela Mednarodne klasifikacije bolezni za onkologijo.

V **Tabeli 6a** je število novih primerov vseh in izbranih rakov prikazano po statističnih regijah. Te številke so pomembne za načrtovanje zdravstvenih zmogljivosti.

Tabela 8 kaže starostno porazdelitev ekstranodalnih in nodalnih lokacij ne-Hodgkinovih malignih limfomov. Ker je število ekstranodalnih lokacij majhno, so prikazane le absolutne številke.

Iz **Tabele 9** je razvidno, kje vse so bolnikom postavili diagnozo. Tako kot že vrsto let polovica vseh bolnikov z rakom, ki jim diagnozo postavijo v slovenskih bolnišnicah ali jih tam tudi začnejo zdraviti, v nadalnjem poteku bolezni pride na posvet ali zdravljenje na Onkološki inštitut Ljubljana.

Tabela 10 prikazuje porazdelitev bolnikov po stadiju, v katerem je bila bolezen odkrita. Uporabljena je poenostavljena opredelitev stadijev, ki upošteva vse preiskovalne metode, vključno operacijo; če bolnik ni bil poprej zdravljen, tudi obdukcijo. Uporabljamo in navajamo jo zato, ker so podatki o stadiju bolezni po klasifikaciji TNM na prijavnicah pogosto pomanjkljivi. Poenostavljena opredelitev stadijev pri solidnih tumorjih praviloma sledi klasifikaciji TNM. V omejeni stadiji je razvrščena bolezen, kjer je tumor označen kot T1 in T2 (razen pri dojki, malignem melanomu in ščitnici, kjer so vključeni tudi tumorji T3, in materničnem vratu, telesu in sarkomih, kjer so vključeni le tumorji T1) in pri kateri niso prizadete regionalne bezgavke in ni zasevkov v oddaljenih organih (N0, M0). V stadiju regionalne razširitve je bolezen, kjer je tumor opredeljen kot T3 in T4 (razen v omenjenih izjemah) in/ali so prizadete tudi regionalne bezgavke (N1), zasevkov v oddaljenih bezgavkah in organih pa ni (M0). V stadiju oddaljene razširitve pa je tista bolezen, pri kateri so zasevki že v oddaljenih bezgavkah ali organih (M1). Maligni limfomi so opredeljeni po klasifikaciji Ann-Arbor.

V **Tabeli 11** so uradni podatki o umrljivosti za raki v letu 2006. Tabelo so pripravili na Inštitutu za varovanje zdravja RS.

Tabela 12 prikazuje prevalenco vseh in pogostejših rakov na dan 31. 12. 2006.

of International Classification of Diseases. According to this classification, 10,938 new cancer cases were registered. The difference of 105 cases is due to new morphology classification of the third revision of International Classification of Diseases for Oncology.

In **Table 6a**, the number of new cases of all and selected cancer sites by different statistical regions is presented. These data are important for planning health care facilities.

Age distribution of extranodal and nodal sites of non-Hodgkin malignant lymphomas is presented in **Table 8**. Owing to the small number of extranodal sites, only the absolute numbers are given.

From **Table 9** it is evident, in which hospitals cancer cases are diagnosed. Observations of many years show that half of the patients diagnosed or initially treated in regional hospitals are later on referred to the Institute of Oncology Ljubljana.

A simplified definition of stages at diagnosis is presented in **Table 10**. The simplified definition is based on all investigation methods, including surgery. In case the patient was not treated before death, the autopsy record is considered as well. The simplified stage definition is used because, in cancer notification forms, the data on stage according to TNM Classification System are often lacking. However, in solid tumours, the simplified stage definition often follows the TNM Classification. Localised stage includes all cancers where the tumour has been classified as T1 and T2 (except in breast, malignant melanoma and thyroid cancer, where T3 is also included, and uterine cervix, uterine corpus and sarcomas, where T1 only is included), where neither regional node involvement nor distant metastases are found (N0, M0). The regional stage includes tumours classified as T3 and T4 (exceptions already mentioned) and/or regional node metastases (N1), if no metastases in distant lymph nodes or organs (M0) are found. The disease with metastases in distant nodes or organs is classified as the remote stage (M1). Malignant lymphomas are classified according to Ann-Arbor System.

Official data on cancer mortality in 2006 are given in **Table 11**. The table has been prepared at the Institute of Public Health of the Republic of Slovenia.

Groba incidenčna stopnja je število novih primerov na 100.000 oseb opazovane populacije; **Starostno specifična stopnja** pove to relativno število v posamezni petletni starostni skupini.

Tabela 5 prikazuje grobo in starostno specifično incidenčno stopnjo na 100.000 prebivalcev. Število vseh novih primerov raka iz leta 2006 je preračunano na število prebivalcev Republike Slovenije na dan 30. junija 2006. Zgornji del **Slike 3** in **Slika 4** kažeta trend grobih incidenčnih stopenj vseh in izbranih rakov po spolu. Pri grafičnih prikazih so v eno skupino združeni rak debelega črevesa in danke in v drugo rak ust, žrela in grla (glava in vrat).

Če analiziramo incidenco v daljšem časovnem obdobju (če se starostna struktura prebivalstva v času spreminja) ali če primerjamo incidenco med populacijami z različno starostno strukturo, je treba uporabiti eno od metod starostne standardizacije. **Starostno standardizirana stopnja** je teoretična incidenčna stopnja, pri kateri predpostavimo, da je starostna struktura opazovane populacije enaka starostni strukturi v standardni populaciji.

Na **Sliki 5** so za pet najpogostejših lokacij raka pri vsakem spolu narisane grobe in starostno standardizirane incidenčne stopnje. Starostna standardizacija v tem primeru je opravljena s pomočjo slovenske populacije na začetku opazovanega obdobja. **Slika 6** prikazuje letni odstotni prirast/upad grobe in starostno standardizirane incidenčne stopnje pri desetih najpogostejših lokacijah raka po spolu.

Pri starostni standardizaciji se v epidemioloških pregledih največkrat uporablja ena od treh standardnih populacij. **Slika 7** tako prikazuje populacijsko strukturo v svetovnem, evropskem in slovenskem standardu, v **Tabeli E** pa prikazujemo incidenčno stopnjo rakovih bolezni, standardizirano po svetovni, evropski in slovenski standardni populaciji. V **Tabeli 6b** je za primerjavo incidenčnih stopenj med slovenskimi statističnimi regijami uporabljen slovenski standard, starostna struktura prebivalcev Slovenije ob popisu leta 2002. Starostno standardizirane incidenčne stopnje kažejo, da je velik del razlik med regijami posledica različne starostne strukture njihovih prebivalcev, predvsem v različnem deležu starejših. Zaradi drugačne definicije standarda podatki v Tabeli 6b niso primerljivi s podatki, objavljenimi v prejšnjih letnih poročilih.

Data on prevalence of all and most frequent cancers on December 31, 2006 are presented in **Table 12**.

Crude incidence rate is the number of new cases per 100,000 population, while the **Age specific rate** expresses this relative number in an individual five-year age group.

Table 5 shows crude and age specific incidence rate per 100,000 population and cumulative rate per 100. For calculation of crude rate, the Slovenian population on June 30, 2006 was used. The upper part of **Figure 3** and **Figure 4** show the incidence trends for all and selected cancers by sex. In graphical presentations, colon and rectal cancers are grouped in one category as colorectal, as well as oral, pharyngeal and laryngeal cancers as head and neck.

When analysing the incidence rate within longer time period (if the age structure of population changes) or comparing the incidence between populations with different age structure, age standardisation is needed to adjust the rate for the effect of age. **The age-standardised rate** is a theoretical incidence rate assuming that the age structure in the observed population is the same as in the standard population.

In **Figure 5** the crude and age standardized incidence rates for five most common cancer sites by sex are plotted. The standard population in this case was the Slovenian population in the beginning of the observed period. **Figure 6** presents the average annual percentage changes in crude and age standardized cancer incidence rates for ten most common primary sites by sex.

In epidemiological reviews usually one of three standard populations are used. **Figure 7** shows the population structure of the World, European and Slovenian standard populations. In **Table 6b** the Slovenian standard (Slovenian population structure at 2002 census) was used for calculation of age standardized incidence rates by Slovenian statistical regions. Those rates indicate that the majority of these differences are due to different age structure of population in these regions. The data in Table 6b are not comparable to previous years data in that table as the standard used was not the same.

Kumulativna incidenčna stopnja (KS) je petkratna vsota starostno specifičnih incidenčnih stopenj po petletnih starostnih skupinah do 74. leta starosti, preračunana na 100 prebivalcev. Je poseben primer starostne standardizacije, kjer je standardna populacija v vseh starostnih skupinah enaka, zato vrednost ni odvisna od izbora standarda. Kumulativno incidenčno stopnjo za posamezne rakave bolezni po spolu v letu 2006 prikazujemo v zadnjem stolpiču **Tabele 5**. Časovni trend kumulativne incidenčne in umrljivostne stopnje pa je prikazan v spodnjem delu **Slike 4**. Primerjava z obliko krivulje grobe incidenčne stopnje (zgornji del Slike 4) kaže, da povečanja incidence raka ne moremo pripisati le staranju prebivalstva v Sloveniji, ampak da k rasti incidence prispevajo še drugi nevarnosti dejavniki. Pri primerjavi grobe in kumulativne umrljivostne stopnje pa lahko zaključimo, da gre ves porast umrljivosti na račun staranja prebivalstva.

Kumulativna incidenčna stopnja, ki je manjša kot 10/100, je dober približek kumulativnemu tveganju. **Kumulativno tveganje (KT)** je verjetnost posameznika, da zbolí za rakom v izbranem starostnem obdobju, npr. do 74. leta starosti, če ne umre prej zaradi drugih vzrokov. Kumulativno tveganje izražamo v odstotkih. Pri večjih kumulativnih stopnjah pa kumulativno tveganje izračunamo iz kumulativne stopnje po obrazcu: $KT = 100 (1 - e^{-KS/100})$. Kumulativno incidenčno stopnjo raka dojk pri ženskah 7,2/100 tako lahko uporabimo za oceno kumulativnega tveganja raka dojk, ki je v tem primeru 7,2-odstotno. To pomeni oceno, da bo 7,2 % deklic, rojenih leta 2006 ali približno ena od 14, do 74. leta starosti verjetno zbolelo za rakom dojk.

The cumulative incidence rate (CR) is five times the sum of the age-specific incidence rates over five-year age groups up to the age of 74 years, calculated per 100 population. The cumulative rate can be interpreted as a form of age-standardization where no standard population is needed. The last column in **Table 5** shows the cumulative incidence rates by cancer sites and sex in 2006. The cumulative incidence rate was used also to present the incidence time trend in the lower part of the **Figure 4**. The comparison to the curves of crude incidence per 100,000 population (upper part of Figure 4) indicates that the increasing cancer incidence rate in both sexes cannot be attributed only to the aging of Slovenian population, but also to additional risk factors. By comparison of crude and cumulative mortality rates we can conclude that the increasing cancer mortality in Slovenia is only due to population ageing.

If cumulative rate is lower than 10/100, its value is practically equal to that of the cumulative risk. The cumulative risk is the risk an individual would have of developing the disease in question during a certain age period if no other causes of death were in operation. The cumulative risk is expressed per 100 (per cent). When cumulative rate is greater than 10/100, it should be calculated according to the following formula: $CR = 100 (1 - e^{-KS/100})$. For example, the cumulative risk (074) of 7,2/100 for breast cancer in females means that 7,2% of women born in 2006 (approximately every 14th woman) are expected to develop breast cancer by their age of 75 in the absence of any other cause of death.

ZAHVALA

Zdravniki, medicinske sestre in administrativno osebje iz slovenskih bolnišnic in drugih zdravstvenih ustanov so Registrju pošiljali prijavnice s podatki o novih bolnikih z rakom in njihovi nadaljnji usodi ter nam pomagali dopolniti prijave z manjkajočimi informacijami.

Vsaj polovico podatkov, obdelanih v tem poročilu, sta prispevali sodelavki Bolnišničnega registra Onkološkega inštituta v Ljubljani Ana Dotzauer in Maruška Ferjančič.

Naše delo bi bilo bistveno težje brez dolgoletnega sodelovanja s Centralnim registrom prebivalstva RS, Inštitutom za varovanje zdravja RS in Statističnim uradom RS.

Vsem imenovanim in tudi drugim, ki so kakorkoli prispevali k temu poročilu, se najlepše zahvaljujemo.

ACKNOWLEDGEMENT

Physicians, nurses, and administrative staff from Slovenian hospitals and other health institutions have provided the data on new cancer patients and their medical history as well as helped us in obtaining additional information when needed.

Our co-workers at the Hospital Registry of the Institute of Oncology Ljubljana, Ana Dotzauer and Maruška Ferjančič, have contributed at least a half of the information presented in this report.

The long-term collaboration with the Population Registry of the Republic of Slovenia, the Institute of Public Health of the Republic of Slovenia and the Statistical Office of the Republic of Slovenia is indispensable for our work.

We thank all of them as well as all others who have contributed and enabled us to present the results of our work in this report.

IZBOR PUBLIKACIJ, ki so jih sodelavci Epidemiologije in Registra raka objavili v zadnjih petih letih (tudi v sodelovanju z drugimi raziskovalci)

SELECTED PUBLICATIONS, published by the members of Epidemiology and Cancer Registry in the last five years (also in cooperation with other researchers)

2004

- de Vries E, Boniol M, Dore JF, Coebergh JW, Pompe-Kirn V and Eurocare Working Group. Lower incidence rates but thicker melanomas in Eastern Europe before 1992: a comparison with Western Europe. *Eur J Cancer* 2004; 40: 1045–52.
- Norčič G, Repše S, Pompe-Kirn V. Rezultati zdravljenja raka debelega črevesa in danke v Sloveniji – analiza leta 1997. *Gastroenterolog* 2004; 8: Suppl 2: 287–9.
- Primic Žakelj M, Kirar Fazarinc I. Cervical cancer screening – a Slovenian experience. In: Better health outcomes through public health approaches in primary health care. Fourth international forum on common access to health care. Brdo pri Kranju: Ministry of Health, 2004: 1–5.
- Primic Žakelj M, Ravnhar B and Collaborative Group on Hormonal Factors in Breast Cancer. Breast cancer and abortion: collaborative reanalysis of data from 53 epidemiological studies, including 83000 women with breast cancer from 16 countries. *Lancet* 2004; 363: 1007–16.
- Primic Žakelj M, Zadnik V. Kajenje in rak v Sloveniji. In: Štabuc B, Primic Žakelj M, Zdešar A eds. Kajenje in rak. 12. seminar »In memoriam dr. Dušana Reje«. Ljubljana: Zveza slovenskih društev za boj proti raku, Onkološki inštitut, Inštitut za varovanje zdravja RS, Rdeči križ Slovenije, 2004: 36–42.
- Primic Žakelj M, Zadnik V. Epidemiologija raka dojk v svetu in v Sloveniji. *Radiol Oncol* 2004; 38: Suppl 1: S1–S7.
- Primic Žakelj M, Zadnik V, Škrlec F. Nekaj osnovnih podatkov in zanimivosti iz novega letnega poročila Registra raka za Slovenijo. *Onkologija* 2004; 8: 22–4.
- Tyczynski JE, Bray F, Pompe-Kirn V, et al. Lung cancer mortality patterns in selected Central Eastern and Southern European countries. *Int J Cancer* 2004; 109: 598–610.
- Tyczynski JE, Pleško I, Primic Žakelj M, et al. Breast cancer mortality patterns and time trends in 10 new EU member states: mortality declining in young women, but still increasing in the elderly. *Int J Cancer* 2004; 112: 1056–64.
- Zadnik V, Primic Žakelj M. Vpliv dejavnikov tveganja in genetske nagnjenosti na pojavljanje raka dojk pri mladih ženskah. In: Bešić N, Anderluh F, Benedik J et al eds. Novosti v onkologiji in smernice za obravnavo bolnic z rakom dojk in bolnikov z malignim melanomom. 17. onkološki vikend. Laško: Kancerološko združenje Slovenskega zdravniškega društva, 2004: 114–5.

2005

- Bray F, Carstensen B, Moller H, Zappa M, Žakelj MP, Lawrence G, et al. Incidence trends of adenocarcinoma of the cervix in 13 European countries. *Cancer Epidemiol Biomarkers Prev* 2005; 14: 2191–9.
- Brennan P, Scelo G, Hemminki K, Mellemkjaer L, Tracey E, Pompe-Kirn V, et al. Second primary cancers among 109 000 cases of non-Hodgkin's lymphoma. *Br J Cancer* 2005; 93: 159–66.
- Hemminki K, Scelo G, Boffetta P, Mellemkjaer L, Tracey E, Andersen A, Pompe-Kirn V, et al. Second primary malignancies in patients with male breast cancer. *Br J Cancer* 2005; 92: 1288–92.
- Kobal AB, Horvat M, Prezelj M, Pompe-Kirn V, Zadnik V, Osredkar J, et al. Vpliv elementarnega živega srebra na peroksidacijo lipidov in funkcionalno sposobnost posameznih tarčnih organov pri prebivalcih mesta Idrija in delavcih rudnika: zaključno poročilo raziskovalnega projekta (skrajšana verzija). *Idrij Razgl* 2005; 50: 20–30.
- Norčič G, Repše S, Pompe-Kirn V. Rak debelega črevesa in danke v Sloveniji – razlike v kirurškem zdravljenju in preživetju bolnikov. *Zdrav vestn* 2005; 74:št. 12, 767–70.
- Pompe-Kirn V. Podrobnejši pregled trenda incidence raka ščitnice v obdobju 1983–2002 v Sloveniji. *Onkologija* 2005; 9: 12–4.
- Primic Žakelj M. Epidemiology of breast cancer: incidence and mortality trends, prevention and control. 3rd Sarajevo breast cancer conference. Sarajevo: ESO, 2005: 15–27.
- Primic Žakelj M. Prenovljeni evropski kodeks proti raku. In: Štabuc B, ed. Poročilo Zveze in regijskih društev za boj proti raku Slovenije: leta 2004. Ljubljana: Zveza društev za boj proti raku Slovenije, 2005: 6–11.
- Primic Žakelj M. Zgodnje odkrivanje pogostejših rakov pri starejših. In: Turk J, ed. Zdrava poznejša leta. Ljubljana: Društvo za zdravje srca in ožilja Slovenije, 2005: 97–110.
